

Technical Service Bulletin – Model DB2-B730 NBN

This is a Technical Service Bulletin for Industrial Sewing Machine model DB2-B730 NBN. These machines were produced between September, 1991 and June, 1994. According to our records, there were fewer than 10 of these machines sold in the Americas.

The DB2-B730 NBN machines include a control box under the sewing machine table. Dust can accumulate in the control box and may contribute to a **potentially hazardous condition**. If you have one of these machines, please contact Brother by calling **1-901-379-1085/1-901-371-1281** or **tsupport@brother.com**, so that we can arrange for an inspection, cleaning and, if necessary, repair to certain control box electronics, without charge.

Thank you for your cooperation in this matter. Please be advised that Brother strives to continuously improve the quality of our products so that our customers can rely on us.

For identification of whether your machine is affected, please check if [NBN] is described either on the panel of the sewing machine head, the name plate or the control box under the machine, as mentioned below.
