Thank you very much for purchasing the Brother Industrial Sewing Machine. Please read this "Programmer Instruction Manual" and the separate volume "Programmable Electronic Pattern Sewer Instruction Manual" carefully before using the machine.

Operation of this industrial sewing machine is usually carried out in front of moving parts such as the needle and the needle thread take-up. These parts may cause personal injuries. Please follow the operational and safety instructions by the experts/instructors and use this machine correctly.

Chapter 1
Preparations of operation
Connection

Connection of the programmer cable to the machine is described here.

Check that the machine power is OFF before connecting the cable.

1. Connect the cable to the connector on the left side of the operation panel.
Handling the programmer

**After use**

Wind the cable for storage as shown in the figure.
Turning power ON

1. Switch ON the machine.

2. Press the foot switch pedal to lift the work clamp.

3. Set the pattern sheet.
   Fix the pattern sheet with adhesive tape on the feed plate to prevent displacement.

4. Press the foot switch pedal to lower the work clamp.

5. Moving the needle closer to the pattern sheet by turning the pulley allows easier programming.

6. Press \( \text{P} \) on the programmer.
   The needle moves to the home position.
Turning power OFF

1. **Write the programmer data into a floppy disk.**
   Refer to "Writing data to a floppy disk" (page 214.).
   If the data is not need to be saved, delete it.
   Refer to "Deleting data in a floppy disk" (page 216.).

2. **Press 🈸 on the programmer.**
   The panel turns off.

3. **Press the foot switch pedal to lift the work clamp.**

4. **Remove the pattern sheet.**

5. **Press the foot switch pedal to lower the work clamp.**

6. **Switch OFF the machine.**
Handling of floppy disk

Do not force open the shutter for direct contact with the magnetic area.

Do not store floppy disks in an extremely high or low ambient temperature.

Do not use or store floppy disks in a dusty place.

Do not bend the disk. Do not put things on the disk.

Do not remove the disk out of the drive during the access lamp is lit.

Do not bring disks near magnetic matters such as magnetic screwdriver or the back side of the programmer.

Do not use floppy disks under high humidity.

Do not store floppy disks under direct sunlight.

Avoid contact with solvent or drink.
Protecting data in floppy disks

Write-protection is available for a floppy disk to prevent undesired data deletion. A write-protected disk is read-only. It is recommended to provide write-protection for disks which contain important data.

To do so, slide the write-protect notch to open the slot as shown below.

Setting a Floppy Disk to the Floppy Disk Drive

Insert a floppy disk straight into the slot. The label side of the disk must face the front.

Press the eject switch to remove the disk out of the drive.

Do not press the eject switch during the access lamp is lit. This may lead to data corruption.
Contents

This manual consists of the following chapters.

Chapter 1  Preparations of operation
Describes the basic precautions.

Chapter 2  Programming with Help Function
Describes the procedure to create programs using icons.
It is recommended for persons
  who are used to icon input.
  who use this machine for the first time.
  who sometimes create programs.

Chapter 3  Programming with Command Function
Describes the procedure to create programs using command functions.
It is recommended for persons
  who is specially responsible for program creation.
  who have created programs for BAS-300 series.

Chapter 4  Extended Option Output
Describes on setting the extended option output.

Chapter 5  Reading/Writing Data
Describes the procedure to read from/write into floppy disks.

Chapter 6  Preference
Describes the setting procedure of the operation conditions.
Notes for programming

Pattern sheet
Use thin plotting paper or prepare copies of pattern sheet.
The pattern sheet is designed in the original scale. Adjust the size to magnification (2, 5, or 10) for magnified input.

Stitch length
Setting range between 0.3 and 12.7 mm is available.

Stitch count
Maximum available count is 20,000.

Available types of floppy disk

<table>
<thead>
<tr>
<th>Data type (*1)</th>

</tbody>
</table>

(*1) As shown in the table, four types of data are available for writing. Data written into 2HD and 2DD disks are automatically converted to BAS300E and former BAS300A data respectively.

(*2) TFD data is converted to BAS300E data by the programmer and becomes available for sewing.

(*3) Restrictions for 2DD floppy disks
The use of following functions added to the E series are restricted to maintain the compatibility with former BAS300A data.

Restricted functions

<table>

Please read before programming

When the lamp on the button 🎨 is lit, small pictures appear on the display. These pictures represent different functions. They are called 'icons'. This chapter describes the method of programming with icons.

Panel description and usage

The following panel keys are used in Help mode.

Press this key to start/end a program. Refer to "Turning power OFF" (Page 11).

Press this key to return to the previous step or when a setting is canceled.

Press this key to return to the corresponding submenu.

This key may be used similarly as 🎨

Press this key and turn on the key lamp for programming with the help function.

Press this key to check setting.

Press these keys to input numerical values.

Press these keys to go to the following steps or to select ON/OFF setting.

Press these keys to go to the following steps or to move the needle.

Press this key to start/end a program. Refer to "Turning power OFF" (Page 11).
Display screen

When \( \text{P} \) is pressed, the following screen is displayed. If the screen is not displayed, press \( \text{P} \).
Programming flowchart

Programming

Select  and press .

Position the sewing start position and press .

Select an icon for programming. (Refer to page 83.)

Combine straight lines, curves and other figures to make patterns on the pattern sheet. After completing each pattern, press or key to return to the submenu. The data is available until deletion. The program outline may be checked or corrected during editing.

Input end code. (Refer to page 91.)
Editing program (Refer to page 111.)

Select [ ] and press [ ]

Select an icon for editing.

Press [ ] after editing.

Checking and setting (Refer to page 107.)

Select [ ] and press [ ]

Move to the needle position for setting.

Press [ ] and carry out setting.
## Description of Icons

Creating magnified data
- Inputting data (x2)
- Inputting data (x5)
- Inputting data (x10)

Carrying out double stitch
- Creating double stitch data in the reverse direction to the left side of the sewing path
- Creating double stitch data in the reverse direction to the right side of the sewing path
- Creating double stitch data in the same direction to the left side of the sewing path
- Creating double stitch data in the same direction to the right side of the sewing path
- Offsetting double stitch data to the left side of the sewing path
- Offsetting double stitch data to the right side of the sewing path

Displaying the data image during editing

Checking the program setting and setting attribute

Editing the current data
- Moving a pattern in parallel by feeding
- Moving a pattern in parallel by sewing with the specified pitch
- Moving a pattern in parallel
- Repeated copying
- Copying a pattern symmetrically to the Y axis
- Copying a pattern symmetrically to the X axis
- Copying a pattern symmetrically to a point
- Copying a pattern symmetrically to a point

Deleting a part of the program

Setting low-speed sewing

Inputting the trigger

Starting a multiple stitch

Displaying a pattern image

Checking the program setting and setting attribute
Chapter 2 Programming with Help Function

**Editing data**

- Moving a pattern in parallel
- Moving a pattern symmetrically to the Y axis
- Moving a pattern symmetrically to the X axis
- Moving a pattern symmetrically to a point
- Resizing a pattern
- Copying a resized pattern
- Rotating a pattern clockwise
- Copying a pattern rotated clockwise
- Rotating a pattern counterclockwise
- Copying a pattern rotated counterclockwise
- Setting the extended option output

**Deleting data**
Programming example

Frequently used programming method is explained here. Refer to "Programming" (page 83) for function and operation of each icon.

Programming for each stitch

Program each stitch according to the pattern. The example in the left is used for explanation.

I Programming

1. Press \[ P \].

2. Select with \[ ] and press \[ J \].

3. Move the work clamp with \[ \Delta \n \n \n ]\. Press \[ J \] when the needle point is at point A of the pattern.

4. Select with \[ \Delta \n \n \n ]\. and press \[ J \].

5. Move the work clamp with \[ \Delta \n \n \n ]\. Press \[ J \] when the needle point is at point B of the pattern.

6. Repeat step 5 and create the program to point C.
7. When point C is programmed, press ESC.

[Diagram]

Inputting the end code

1. Select  with \( \Delta \nabla \downarrow \uparrow \) and press .

[Diagram]

2. Select the end code type with \(+\) \(-\) and press .

[Diagram]

3. Press ESC.

[Diagram]

Saving

1. Select  with \( \downarrow \uparrow \) and press .

[Diagram]

2. Select  with \( \downarrow \uparrow \) and press .

[Diagram]

3. Input the data number and press .

[Diagram]

4. Press ESC.

Ending program

1. Press .
To program a detailed pattern for each stitch, use a magnified input. The example in the left is used for explanation of programming the pattern to the magnification of 5.

**Programming**

1. Press P.
2. Select with ▲▼ and press .
3. Move the work clamp with △▼▼. Press when the needle point is at point A of the pattern.
4. Select with ▲▼▼ and press .
5. Select and press .
6. Move the work clamp with △▼▼. Press when the needle point is at point B of the pattern.
7. Repeat step 6 and create the program to point D.
8. When point D is programmed, press ESC twice.
Inputting the end code

1. Select with \(\Delta\nabla\leftarrow\rightarrow\) and press \(\downarrow\).

2. Select the end code type with \(+\ -\) and press \(\downarrow\).

3. Press \(\text{ESC}\).

Saving

1. Select with \(\leftarrow\rightarrow\) and press \(\downarrow\).

2. Select with \(\leftarrow\rightarrow\) and press \(\downarrow\).

3. Input the data number and press \(\downarrow\).

4. Press \(\text{ESC}\).

Ending program

1. Press \(\downarrow\).
The pattern with lines is programmed. The example in the left is used for explanation of programming.

### Programming

1. Press \( P \).

2. Select with \( \text{ } \) and press \( J \).

3. Move the work clamp with \( \text{ } \). Press \( J \) when the needle point is at point A of the pattern.

4. Select with \( \text{ } \) and press \( J \).

5. Input the stitch length and press \( J \).

6. Move the work clamp with \( \text{ } \). Press \( J \) when the needle point is at point B of the pattern.

7. Repeat step 6 and create the program to point E.

8. When point E is programmed, press \( \text{ESC} \) twice.
Inputting the end code

1. Select \[ \text{[ ]} \] with \[ \text{[ ]} \text{[ ]} \] and press \[ \text{[ ]} \].

2. Select the end code type with \[ \text{[ ]} \text{[ ]} \] and press \[ \text{[ ]} \].

3. Press \[ \text{[ ]} \].

Saving

1. Select \[ \text{[ ]} \] with \[ \text{[ ]} \text{[ ]} \] and press \[ \text{[ ]} \].

2. Select \[ \text{[ ]} \] with \[ \text{[ ]} \text{[ ]} \] and press \[ \text{[ ]} \].

3. Input the data number and press \[ \text{[ ]} \].

4. Press \[ \text{[ ]} \].

Ending program

1. Press \[ \text{[ ]} \].
# Curve

The pattern with curves is programmed. The example in the left is used for explanation of programming at the curve and the corner.

When a split is made

When a split is not made

## Programming

1. Press \( P \).

2. Select \( \) with \( \) and press \( \) .

3. Move the work clamp with \( \) . Press \( \) when the needle point is at point A of the pattern.

4. Select \( \) with \( \) and press \( \) .
5. Input the stitch length and press \[ \text{ } \].

6. Move the work clamp with \( \Delta \uparrow \downarrow \). Press \( \text{ } \) when the needle point is at point B of the pattern.

7. Repeat step 6 and create the program to point C.

8. When point C is programmed, press \( \text{ } \) again.

9. Create the program to point E.

10. When point E is programmed, press \( \text{ } \) again.

11. Create the program to point I.

12. When point I is programmed, press \( \text{ } \) again.

13. Press \( \text{ } \) twice.

### Inputting the end code

1. Select \( \text{ } \) with \( \Delta \uparrow \downarrow \) and press \( \text{ } \).

2. Select the end code type with \( \text{ } \) and press \( \text{ } \).

3. Press \( \text{ } \).
Saving

1. Select [ ] with [ ] and press .

2. Select [ ] with [ ] and press .

3. Input the data number and press .

4. Press .

Ending program

1. Press .
Double stitch

A double stitch is programmed to make two lines with a constant width. The example in the left is used for explanation of a double stitch to the left of sewing direction.

When the line changes from straight to curve as in points B or E, be sure to press twice to make a split. More intermediate points such as points C or D will create smooth curves.

**Programming**

1. **Press**
   The work clamp moves to the home position and the programmer screen is displayed.

2. **Select** with and press .

3. **Move the work clamp with . Press when the needle point is at point A of the pattern.**
   The first stitch (point A) is programmed.

4. **Select** with and press .

5. **Select the double stitch type and press .**

6. **Input the stitch length and the width of the double stitch. Press .**
   3.0 mm is input in the example.
   Input 030 to make the stitch length to 3.0 mm.
   To switch input between the stitch length and the width, use .
7. Move the work clamp with \( \Delta \nabla \langle \rangle \). Press \( \downarrow \) twice when the needle point is at point B of the pattern.

8. Program points C, D and E.

9. When point E is programmed, press \( \downarrow \) again.

10. Program point F.

11. When point F is programmed, press \( \downarrow \) again.

12. Press \( \uparrow \).

   The needle moves to points F, G and H.

13. When the needle stops, press \( \text{ESC} \) three times.

### Inputting the end code

1. Select \( \text{Esc} \) with \( \Delta \nabla \langle \rangle \) and press \( \downarrow \).

2. Select the end code type with \( \rightarrow \) and press \( \downarrow \).

   "111" is selected in the example. Press \( \downarrow \) and the work clamp returns to the first stitch(point A).

3. Press \( \text{ESC} \).

   The work clamp returns to the home position.
Saving

1. Select with ↓ and press .

2. Select with ↓ and press .

3. Input the data number and press .

4. Press ESC.

Ending program

1. Press .

Feed

After thread breaking, a feed is set for continuous sewing with the work clamp in position. The example in the left is used for explanation of programming pattern 2 with a feed after pattern 1.

Programming

1. Press .
   The work clamp moves to the home position and the programmer screen is displayed.

2. Select with ↓ and press .
3. Move the work clamp with \( \triangle \nabla \nabla \rangle \). Press \( \odot \) when the needle point is at point A of the pattern.

The first stitch (point A) is programmed.

4. Program pattern 1.

5. Press \( \text{ESC} \) after input of point B.

The number of pressing \( \text{ESC} \) depends on the programming method for pattern 1.

When \( \nabla \) is used for programming, press twice.
When each stitch is programmed, press once.

6. Select \( \underline{\mathrm{H}} \) with \( \triangle \nabla \nabla \rangle \) and press \( \odot \).

7. Move the work clamp with \( \triangle \nabla \nabla \rangle \). Press \( \odot \) when the needle point is at point C of the pattern.

8. Press \( \text{ESC} \).

10. When point D is programmed, press \( \text{ESC} \).

The number of pressing \( \text{ESC} \) depends on the programming method for pattern 1.

When \( \nabla \) is used for programming, press twice.
When each stitch is programmed, press once.

### Inputting the end code

1. Select \( \underline{\mathrm{H}} \) with \( \triangle \nabla \nabla \rangle \) and press \( \odot \).

2. Select the end code type with \( \nabla \rightarrow \) and press \( \odot \).

"111" is selected in the example. Press \( \odot \) and the work clamp returns to the first stitch (point A).

3. Press \( \text{ESC} \).

The work clamp returns to the home position.
### Saving

1. Select 📜 with 🔷️ and press 🎲.

2. Select 📜 with 🔷️ and press 🎲.

3. Input the data number and press 🎲.

4. Press 🎲.

### Ending program

1. Press 🎲.

### Basting

Basting is programmed. The example in the left is used for explanation of basting programming from point C to point F.

### Programming

1. Press 🎲.
   
   The work clamp moves to the home position and the programmer screen is displayed.

2. Select 📜 with 🔷️ and press 🎲.
3. Move the work clamp with △▽▼▶. Press ◀ when the needle point is at point A of the pattern.
   The first stitch (point A) is programmed.

4. Select ⬆️ with △▽▼▶ and press ◀.

5. Move the work clamp with △▽▼▶. Press ◀ when the needle point is at point B of the pattern.

6. Repeat step 5 and create the program to point C.

7. When point C is programmed, press ESC.

8. Select ⬆️ with △▽▼▶ and press ◀.

9. Move the work clamp with △▽▼▶. Press ◀ when the needle point is at point D of the pattern.

10. Repeat step 9 and create the program to point F.

11. Press ESC.

12. Select ⬆️ with △▽▼▶ and press ◀.

13. Create the program to point H.

14. When point H is programmed, press ESC.
Inputting the end code

1. Select \( \text{ESC} \) with \( \text{Δν<↓>} \) and press \( \text{ESC} \).

2. Select the end code type with \( + - \) and press \( \text{ESC} \).
   “111” is selected in the example. Press \( \text{ESC} \) and the work clamp returns to the first stitch(point A).

3. Press \( \text{ESC} \).
The work clamp returns to the home position.

Saving

1. Select \( \text{ESC} \) with \( \text{<↓>} \) and press \( \text{ESC} \).

2. Select \( \text{ESC} \) with \( \text{<↓>} \) and press \( \text{ESC} \).

3. Input the data number and press \( \text{ESC} \).

4. Press \( \text{ESC} \).

Ending program

1. Press \( \text{ESC} \).
A pattern symmetric to the X axis or the Y axis is programmed. After programming the pattern, select the symmetrical pattern type to complete the pattern. The example in the left is used for explanation of programming symmetric to the Y axis.

The following symmetrical pattern types are available:

- **Symmetric to Y axis**
  - Select △.

- **Symmetric to X axis**
  - Select <.

- **Symmetric to point**
  - Select ■.

- **Turnover**
  - Select [.

---

## Programming

1. **Press ▶.**
   
The work clamp moves to the home position and the programmer screen is displayed.

2. **Select ▼ with ▼▼ and press ▶.**

3. **Move the work clamp with ▲▼▼. Press ▶ when the needle point is at point A of the pattern.**
   
The first stitch (point A) is programmed.

4. **Create the program to point B.**
5. **When point B is programmed, press ESC.**
   The number of pressing ESC depends on the programming method.

### Selecting the symmetrical pattern type

1. Select with △▽◁▷ and press ▼.

2. Select the symmetrical pattern type and press ▼.
   ![Symmetrical Pattern Type](image)
   
   (symmetric to Y axis) is selected in the example.

3. **Input the number of feed boundaries to be ignored and press ▼.**
   Refer to “Editing the current data” (page 98) for details.

4. The needle point moves slowly from point B to point A in the right half and it is automatically programmed. Press + to make fast movement.

5. **Press ESC twice.**

### Inputting the end code

1. Select with △▽◁▷ and press ▼.

2. **Select the end code type with + - and press ▼.**
   “111” is selected in the example. Press ▼ and the work clamp returns to the first stitch(point A).

3. **Press ESC.**
   The work clamp returns to the home position.
**Saving**

1. Select 📁 with ←→ and press 📖.

2. Select 📁 with ←→ and press 📖.

3. Input the data number and press 📖.

4. Press ESC ESC ESC.

**Ending program**

1. Press 🎤.
Splitting

Different patterns, splitting each pattern in sequence, are programmed. The example in the left is used for explanation of 3 patterns in sequence.

Programming

1. Press \( \text{P} \).
The work clamp moves to the home position and the programmer screen is displayed.

2. Select with \( \text{和} \) and press \( \text{J} \).

3. Move the work clamp with \( \text{△碳} \). Press \( \text{J} \) when the needle point is at point A of the pattern.
The first stitch (point A) is programmed.

4. Program pattern 1.

5. Press \( \text{ESC} \) when the needle point is at point B of the pattern.
The number of pressing \( \text{ESC} \) depends on the programming method for pattern 1.

6. Select \( \text{和} \) with \( \text{△碳} \) and press \( \text{J} \).

7. Move the work clamp with \( \text{△碳} \). Press \( \text{J} \) when the needle point is at point C of the pattern.
8. Press \( \text{ESC} \).

9. Select \( \uparrow \) with \( \Delta \uparrow \Delta \downarrow \) and press \( \downarrow \).

10. Select ON/OFF of needle stopping at the bottom with \( + \) \( - \) and press \( \downarrow \).

11. Program pattern 2.

12. Program pattern 3 in the similar manner.

13. When pattern 3 is programmed, press \( \text{ESC} \).

### Inputting the end code

1. Select \( \downarrow \) with \( \Delta \uparrow \Delta \downarrow \) and press \( \downarrow \).

2. Select the end code type with \( + \) \( - \) and press \( \downarrow \).
   "111" is selected in the example. Press \( \downarrow \) and the work clamp returns to the first stitch (point A).

3. Press \( \text{ESC} \).
   The work clamp returns to the home position.

### Saving

1. Select \( \downarrow \) with \( \Delta \uparrow \Delta \downarrow \) and press \( \downarrow \).
2. Select \( \text{Select} \) with \( \text{Select} \) and press \( \text{Select} \).

3. Input the data number and press \( \text{Select} \).

4. Press \( \text{ESC} \).

---

### Ending program

1. Press \( \text{ESC} \).

---

### Zigzag stitch

Zigzag stitch is programmed. The example in the left is used for explanation of even width of zigzag stitch on the sewing path.

Zigzag with curves may be programmed.

---

### Programming

1. Press \( \text{ESC} \).
   
The work clamp moves to the home position and the programmer screen is displayed.

2. Select \( \text{Select} \) with \( \text{Select} \) and press \( \text{Select} \).

3. Move the work clamp with \( \text{Move} \). Press \( \text{Move} \) when the needle point is at point A of the pattern.
   
The first stitch (point A) is programmed.
4. Select \[ \text{△・□・△} \] with \( \text{△・□・△} \) and press \( \text{△} \).

5. Select \[ \text{△・□・□} \] with \( \text{△・□・□} \) and press \( \text{△} \).

6. Input the zigzag width and the stitch length and press \( \text{△} \).

   3.0 mm is input in the example.
   Input 030 to make the width and the stitch length to 3.0 mm.
   To switch input between the stitch length and the width, use \( \text{△・□・□} \).

7. Move the work clamp with \( \text{△・□・□} \). Press \( \text{△} \) when the needle point is at point B of the pattern.

   To program curves, repeat this step.

8. Press \( \text{△} \) again.

9. Press \( \text{ESC・ESC・ESC} \) three times.

### Inputting the end code

1. Select \[ \text{△・□・△} \] with \( \text{△・□・△} \) and press \( \text{△} \).

2. Select the end code type with \( \text{△・□・□} \) and press \( \text{△} \).

   "111" is selected in the example. Press \( \text{△} \) and the work clamp returns to the first stitch(point A).

3. Press \( \text{ESC} \).

   The work clamp returns to the home position.
Saving

1. Select with and press .

2. Select with and press .

3. Input the data number and press .

4. Press .

Ending program

1. Press .

Multiple stitch

This section describes programming of a multiple stitch. Refer to the example on the left.

Programming can be started from either inside or outside line. Embroidering is carried out in the sequence of programming.

Embroidering direction depends on programming sequence.

When embroidering direction should be changed at a sharp angle, a split should be provided in the vicinity of the direction change point for finishing the multiple stitch in relatively uniform conditions.

Up to 200 points can be specified for one side. If you attempt to input 201 or more points, the needle point is automatically returned to the previous points. In that case, start inputting points of the outside (or the inside) line, or reconsider point input positions or pattern.
Creating a stitch pattern

1. Create a pattern in consideration of the most inside and outside lines for a multiple stitch. The two lines should be spaced uniformly.

2. Connect each direction change point on the inside line with the matched direction change point on the outside line using a line.

3. Provide one point (or more points) between the above two direction change points, and connect them using a line. Follow the procedure for curve points specification. Specify points in pairs on the inside and outside lines. The lines should be spaced uniformly.

Programming

1. Press \( P \).
   The work clamp moves to the home position and the programmer screen is displayed.
2. Select the first stitch (point 1) is programmed.

3. Move the work clamp with \( \Delta \triangledown \triangledown \). Press when the needle point is at point 1 of the pattern.

4. Select with \( \Delta \triangledown \triangledown \) and press \( \triangledown \).

5. Input the stitch length and the number of lines for a multiple stitch. Press \( \triangledown \).

6. Move the work clamp with \( \Delta \triangledown \triangledown \). Press when the needle point is at point 2 of the pattern.

7. Move the work clamp with \( \Delta \triangledown \triangledown \). Press twice when the needle point is at point 3 of the pattern.

8. Program the following points up to point 17 with the curve programming steps.

9. Press \( \triangledown \). Move the work clamp with \( \Delta \triangledown \triangledown \). Press when the needle point is at point 11 of the pattern.
10. Program the following points up to point ✂ in the same manner. 
When programming, be sure that the points and splits specified on the inside line are paired with those on the outside line respectively.
If there are any points or splits not paired, the needle point automatically returns to the previous point. Correct the program.

11. Press ◔.

12. Press ❄.

Inputting the end code

1. Select ☘ with △▽◁▷ and press ◔.

2. Select the end code type with +− and press ◔.
“111” is selected in the example. Press ◔ and the work clamp returns to the first stitch(point A).

3. Press ❄.
The work clamp returns to the home position.

Saving

1. Select ☘ with ◐▷ and press ◔.

2. Select ☘ with ◐▷ and press ◔.

3. Input the data number and press ◔.

4. Press ❄.

Ending program

1. Press ◔.
Example of modified program

This section describes the modification method of the program using examples. Refer to "Programming" (page 83) or "Checking the program setting and setting attribute" (page 107) for function and operation of each icon.

Resizing pattern

The programmed pattern is resized. The example in the left is used for explanation.

The center point (reference point) of resizing can be changed. The magnifying direction varies depending on the position of the reference point.

If the reference point is not determined, the pattern is resized to the home position.

If the reference point is determined, the pattern is resized to the reference point.

 Calling data

1. Press 

   The work clamp moves to the home position. The programmer screen is displayed.
2. Select [ ] with [ ] and press [ ].

3. Select [ ] with [ ] and press [ ].

4. Input the data number and press [ ].

5. Press [ESC].

### Resizing

1. Select [ ] with [ ] and press [ ].

2. Select [ ] with [ ] and press [ ].

3. Input the resizing percentage for the X and the Y axes.
   - 150% is input in the example.
   - To magnify the pattern by 150%, input 150.

4. Input the stitch length and press [ ].
   - If the stitch length is 0.0, the pattern is resized with the same number of stitches as the original data.

5. Move the needle to the reference point of resizing with [ ].
   - If the needle is not moved, the pattern is resized to the home position.

6. Press [ ].
   - Calculation is made. The pattern is resized.
Saving

1. Select \[\text{[00]}\] with \[\text{[\(\downarrow\uparrow\)]}\] and press \[\text{[\(\downarrow\)]}\].

2. Select \[\text{[01]}\] with \[\text{[\(\downarrow\uparrow\)]}\] and press \[\text{[\(\downarrow\)]}\].

3. Input the data number and press \[\text{[\(\downarrow\)]}\].

4. Press \[\text{[esc]}\].

Ending program

1. Press \[\text{[P]}\].

Changing partially

A part of the programmed pattern is changed. The example in the left is used for explanation of creating 5’, 6’ and 7’.

Calling data

1. Press \[\text{[P]}\].

   The work clamp moves to the home position. The programmer screen is displayed.
2. Select [ ] with < | > and press [ ].

3. Select [ ] with < | > and press [ ].

4. Input the data number and press [ ].

5. Press [ESC].

Moving to position 4.

1. Select [ ] with < | > and press [ ].

2. Press [ ] and press [ ].
   The work clamp moves from the start position by each stitch.

3. When the needle point reaches 4, press [ ].
   The work clamp stops. If the work clamp passes, input a few stitches and press [ ].
   The needle returns for a few stitches of the input.

4. Press [ESC].

Programming a new point.

1. Select [ ] with △ | △ | △ and press [ ].

2. Move the work clamp with △ | △ | △. Press [ ] when the needle point is at 5'.
3. Repeat step 2 and program 6' and 7'.

4. Press ESC.

5. Select with ▲▼◄► and press ▶.

6. Press 1 and press ▶.
The needle point moves to 5.

7. Press ESC.

Deleting unnecessary points

1. Select with ▲▼◄► and press ▶.

2. Input the number of stitches to be deleted and press ▶.
The example is deleting 3 stitches ahead. Press 3 ◄.

3. The needle point moves to 6, 7 and 8. Points 5, 6 and 7 are deleted.

4. Press ESC twice.
Saving

1. Select \[ \text{(Pattern)} \] with \[ \text{left} \rightarrow \text{right} \] and press \[ \text{set} \].

2. Select \[ \text{(Pattern)} \] with \[ \text{left} \rightarrow \text{right} \] and press \[ \text{set} \].

3. Input the data number and press \[ \text{set} \].

4. Press \[ \text{ESC} \].

Ending program

1. Press \[ \text{P} \].

Deleting the first stitch

The first stitch of the programmed pattern is deleted. The example in the left is used for explanation of deleting 1 and setting 2 for the sewing start position.

Calling data

1. Press \[ \text{P} \].
   
   The work clamp moves to the home position. The programmer screen is displayed.

2. Select \[ \text{(Pattern)} \] with \[ \text{left} \rightarrow \text{right} \] and press \[ \text{set} \].
3. Select \( \text{ } \) with \( \text{ } \) and press \( \text{ } \).

4. Input the data number and press \( \text{ } \).

5. Press \( \text{ } \).

### Moving to position 1

1. Select \( \text{ } \) with \( \text{ } \) and press \( \text{ } \).

2. Press \( \text{ } \) and press \( \text{ } \).

   The work clamp moves to the sewing start position.

3. Press \( \text{ } \).

### Deleting 1

1. Select \( \text{ } \) with \( \text{ } \) and press \( \text{ } \).

2. Input the number of stitches to be deleted and press \( \text{ } \).

   The example is deleting 1 stitch. Press \( \text{ } \).

3. The needle point moves to 2.

4. Press \( \text{ } \) twice.
### Saving

1. Select \[ \text{with } \leftarrow \rightarrow \text{ and press } \downarrow. \]

2. Select \[ \text{with } \leftarrow \rightarrow \text{ and press } \downarrow. \]

3. Input the data number and press \[ \downarrow. \]

4. Press \[ \text{ESC}. \]

### Ending program

1. Press \[ \text{P}. \]

### Changing the first stitch position

The position of the sewing start position is changed. The example in the left is used for explanation of moving the sewing start position from 1 to 1'.

### Calling data

1. Press \[ \text{P}. \]

   The work clamp moves to the home position. The programmer screen is displayed.

2. Select \[ \text{with } \leftarrow \rightarrow \text{ and press } \downarrow. \]
Chapter 2 Programming with Help Function

3. Select \[button\] with \[arrows\] and press \[button\].

4. Input the data number and press \[button\].

5. Press \[button\].

## Moving to position 1

1. Select \[button\] with \[arrows\] and press \[button\].

2. Press \[button\] and press \[button\].
   The work clamp moves to the start position.

3. Press \[button\].

## Programming a new point

1. Select \[button\] with \[arrows\] and press \[button\].

2. Move the work clamp with \[arrows\]. Press \[button\] when the needle point is at 1'.
   1' is programmed.

3. Press \[button\].

## Deleting 1

1. Select \[button\] with \[arrows\] and press \[button\].

2. Press \[button\] and press \[button\].
   The work clamp moves to the sewing start position.
3. Press ESC.

4. Select with ▲▼◄► and press .

5. Input the number of stitches to be deleted and press .
   The example is deleting 1 stitch. Press 1.

6. The needle point moves to 1'.

7. Press ESC twice.

**Saving**

1. Select with ◄► and press .

2. Select with ◄► and press .

3. Input the data number and press .

4. Press ESC.

**Ending program**

1. Press P.
Adding sewing point before the first stitch

A point is added before the current sewing point to change the sewing start position. The example in the left is used for explanation of changing the sewing start position from 1 to 1'.

Calling data

1. Press P.
The work clamp moves to the home position. The programmer screen is displayed.

2. Select  with  and press J.

3. Select  with  and press J.

4. Input the data number and press J.

5. Press ESC.

Moving to position 1

1. Select  with  and press J.

2. Press  and press J.
The work clamp moves to the sewing start position.

3. Press ESC.
Programming a new point

1. Select \( \Delta \) with \( \Delta \) and press \( \Delta \).

2. Move the work clamp with \( \Delta \) so that the needle point is at 1'.
   Record the coordinates (values of X and Y).

3. Press \( \Delta \).
   1' is programmed.

4. Move the work clamp with \( \Delta \) to the opposite position of coordinates recorded in step 2 so that the needle point is at 1 of the pattern.

5. Press \( \Delta \).
   1 is programmed again.

6. Press \( \Delta \).

Deleting 1

1. Select \( \Delta \) with \( \Delta \) and press \( \Delta \).

2. Press \( \Delta \) and press \( \Delta \).
   The work clamp moves to the sewing start position.

3. Press \( \Delta \).

4. Select \( \Delta \) with \( \Delta \) and press \( \Delta \).

5. Input the number of stitches to be deleted and press \( \Delta \).
   The example is deleting 1 stitch. Press \( \Delta \).
6. The needle point moves to 1’.

7. Press \texttt{ESC} twice.

\section*{Saving}

1. Select with \texttt{\downarrow\downarrow} and press \texttt{\rightarrow}.

2. Select with \texttt{\downarrow\downarrow} and press \texttt{\rightarrow}.

3. Input the data number and press \texttt{\rightarrow}.

4. Press \texttt{ESC}.

\section*{Ending program}

1. Press \texttt{P}.
Adding escape point before the first stitch

An escape point is added before the sewing start position. The example in the left is used for explanation of setting escape point A.

The escape point is a provisional point provided for prevention of the work clamp interference with the needle or the bar leg when the work clamp is lifted at the start point.

Calling data

1. Press \( P \).
   The work clamp moves to the home position. The programmer screen is displayed.

2. Select \( \) with \( \uparrow \downarrow \) and press \( \) .

3. Select \( \) with \( \uparrow \downarrow \) and press \( \) .

4. Input the data number and press \( \) .

5. Press \( ESC \).

Moving to position 1

1. Select \( \) with \( \uparrow \downarrow \) and press \( \) .

2. Press \( 1 \) and press \( \) .
   The work clamp moves to the sewing start position.

3. Press \( ESC \).
Programming a new point

1. Select with and press .

2. Move the work clamp with so that the needle point is at A of the pattern.
   Record the coordinates (values of X and Y).

3. Press .
   A is programmed.

4. Move the work clamp with to the opposite position of coordinates recorded in step 2 so that the needle point is at 1 of the pattern.

5. Press .
   1 is programmed again.

6. Press .

Deleting 1

1. Select with and press .

2. Press 2 and press .
   The work clamp moves to the sewing start position.

3. Press .

4. Select with and press .

5. Input the number of stitches to be deleted and press .
   The example is deleting 1 stitch. Press .
6. The needle point moves to A.

7. Press ESC twice.

### Saving

1. Select with and press .

2. Select with and press .

3. Input the data number and press .

4. Press ESC.

### Ending program

1. Press P.
Moving the escape point

The position of the escape point is moved. The example in the left is used for explanation of moving the escape point from A to B.

Calling data

1. Press \( \text{P} \).
   The work clamp moves to the home position. The programmer screen is displayed.

2. Select \( \text{H} \) with \( \leftarrow \rightarrow \) and press \( \text{J} \).

3. Select \( \text{E} \) with \( \leftarrow \rightarrow \) and press \( \text{J} \).

4. Input the data number and press \( \text{J} \).

5. Press \( \text{ESC} \).

Moving to position A

1. Select \( \text{F} \) with \( \leftarrow \rightarrow \) and press \( \text{J} \).

2. Press \( \text{1} \) and press \( \text{J} \).
   The work clamp moves to the start position.

3. Press \( \text{ESC} \).
Programming a new point.

1. Select with ▲▼◄► and press .

2. Move the work clamp with ▲▼◄►. Press when the needle point is at B.
   B is programmed.

3. Press .

Deleting 1

1. Select with ▲▼◄► and press .

2. Press 1 and press .
   The work clamp moves to the sewing start position.

3. Press .

4. Select with ▲▼◄► and press .

5. Input the number of stitches to be deleted and press .
   The example is deleting 1 stitch. Press 1.

6. The needle point moves to B.

7. Press twice.
Saving

1. Select with and press .

2. Select with and press .

3. Input the data number and press .

4. Press .

Ending program

1. Press .

Deleting the escape point

The escape point is deleted. The example in the left is used for explanation of deleting A.

Calling data

1. Press .

The work clamp moves to the home position. The programmer screen is displayed.

2. Select with and press .
3. Select [ ] with [ ] and press [ ].

4. Input the data number and press [ ].

5. Press [ ESC ].

Moving to position A

1. Select [ ] with [ ] and press [ ].

The work clamp moves to the start position.

3. Press [ ESC ].

Deleting A

1. Select [ ] with [ ] and press [ ].

2. Input the number of stitches to be deleted and press [ ].
The example is deleting 1 stitch. Press [ ]

3. The needle point moves to 1.

Saving

1. Select with < and press .

2. Select with < and press .

3. Input the data number and press .

4. Press .

Ending program

1. Press .

Moving the pattern in parallel 1

The program data is moved in parallel. The example in the left is used for explanation of moving the pattern in parallel when the first stitch is the sewing start position.

Calling data

1. Press .
   The work clamp moves to the home position. The programmer screen is displayed.

2. Select with < and press .
3. Select [ ] with [ ] and press [ ].

4. Input the data number and press [ ].

5. Press [ ].

Moving

1. Select [ ] with [ ] and press [ ].

2. Select [ ] with [ ] and press [ ].

3. Move the work clamp with [ ]. Press [ ] when the needle point is at point A of the pattern.

4. Press [ ].

Saving

1. Select [ ] with [ ] and press [ ].

2. Select [ ] with [ ] and press [ ].

3. Input the data number and press [ ].

4. Press [ ].
Ending program

1. Press \( P \).

Moving the pattern in parallel 2

The program data is moved in parallel. The example in the left is used for explanation of moving the pattern in parallel when the first stitch is the escape point.

Calling data

1. Press \( P \).
   - The work clamp moves to the home position. The programmer screen is displayed.

2. Select \( \) with \( \leftarrow \rightarrow \) and press \( J \).

3. Select \( \) with \( \leftarrow \rightarrow \) and press \( J \).

4. Input the data number and press \( J \).

5. Press \( ESC \).

Moving

1. Select \( \) with \( \leftarrow \rightarrow \) and press \( J \).
2. Press \textbf{2} and press \textbf{+}.  
The work clamp moves to point A.

3. Press \textbf{abc}.  

4. Select \textbf{5} with \textbf{\textdownarrow\textleft\textright\textuparrow} and press \textbf{\textdownarrow}.  

5. Select \textbf{6} with \textbf{\textdownarrow\textleft\textright\textuparrow} and press \textbf{\textdownarrow}.  

6. Move the work clamp with \textbf{\textdownarrow\textleft\textright\textuparrow} so that the needle point is at point B of the pattern.  
Record the coordinates (values of X and Y). Do not press \textbf{\textdownarrow}.  

7. Press \textbf{abc} three times.  
The needle point returns to the home position.

8. Select \textbf{7} with \textbf{\textleft\textuparrow\textright\textdownarrow} and press \textbf{\textdownarrow}.  

9. Press \textbf{1} and press \textbf{+}.  
The work clamp moves to point C.

10. Press \textbf{abc}.  

11. Select \textbf{8} with \textbf{\textdownarrow\textleft\textright\textuparrow} and press \textbf{\textdownarrow}.  

12. Select \textbf{9} with \textbf{\textdownarrow\textleft\textright\textuparrow} and press \textbf{\textdownarrow}.  

13. Move the work clamp with \textbf{\textdownarrow\textleft\textright\textuparrow} for the coordinates recorded in step 6.  

14. Turn the pulley with a hand and put a marking with the needle to indicate the position of point D.
15. Turn the pulley with a hand and move the needle to the top point.

16. Press \( \text{ESC} \) three times.

17. Select \( \text{ESC} \) with \( \text{left} \) and press \( \text{ESC.} \)

18. Select \( \text{ESC} \) with \( \text{up} \) and press \( \text{ESC.} \)

19. Move the work clamp with \( \text{up} \). Press \( \text{ESC} \) when the needle point is at point D.

20. Press \( \text{ESC} \).

**Saving**

1. Select \( \text{ESC} \) with \( \text{left} \) and press \( \text{ESC.} \)

2. Select \( \text{ESC} \) with \( \text{left} \) and press \( \text{ESC.} \)

3. Input the data number and press \( \text{ESC.} \)

4. Press \( \text{ESC.} \).

**Ending program**

1. Press \( \text{ESC.} \).
Deleting a part of the program during programming

A program can be modified during programming. The example in the left is used for explanation of deleting 2 stitches at 8 and creating a new program.

1. Press ESC to display the screen in the right.

2. Select with △□ and press .

3. Input the number of stitches to be deleted and press .
   The example is deleting 2 stitches backward. Press 2 .

4. The needle point moves to 6.

5. Press ESC .

6. Continue programming.
Moving a part of continuous program in parallel

A part of continuous program is moved in parallel. The example in the left is used for explanation of moving patterns B and C in parallel.

Calling data

1. Press \( \mathbf{P} \).
The work clamp moves to the home position. The programmer screen is displayed.

2. Select \( \mathbf{H} \) with \( \mathbf{L} \) and press \( \mathbf{J} \).

3. Select \( \mathbf{H} \) with \( \mathbf{L} \) and press \( \mathbf{J} \).

4. Input the data number and press \( \mathbf{J} \).

5. Press \( \text{ESC} \).

Moving to position 1

1. Select \( \mathbf{H} \) with \( \mathbf{L} \) and press \( \mathbf{J} \).

2. Press \( \mathbf{9 9 9} \) and press \( \mathbf{J} \).
The work clamp moves from the start position by each stitch.
3. When the needle point reaches 1, press \( \text{Press} \).
The work clamp stops. If the work clamp passes, input a few stitches and press \( \text{Press} \). The needle returns for a few stitches of the input.

4. Press \( \text{Press} \).

Moving in parallel

1. Select \( \text{Select} \) with \( \text{Select} \) and press \( \text{Press} \).

2. Select \( \text{Select} \) with \( \text{Select} \) and press \( \text{Press} \).

3. Move the work clamp with \( \text{Move} \). Press \( \text{Press} \) when the needle point is at 2.
Move 3 to 4 in the similar manner.

4. Press \( \text{Press} \) three times.

Saving

1. Select \( \text{Select} \) with \( \text{Select} \) and press \( \text{Press} \).

2. Select \( \text{Select} \) with \( \text{Select} \) and press \( \text{Press} \).

3. Input the data number and press \( \text{Press} \).

4. Press \( \text{Press} \).
Ending program

1. Press \( \text{P} \).

Canceling thread breakage at the last stitch

Addition of feed after the last point can cancel thread breakage at the last stitch.

When "115" is input for the end code, the thread breakage does not occur. In this case, every thread breakage including emergency stop is canceled. Carry out the following setting for canceling thread breakage at the specified point.

Programming

1. Create the program 1 stitch (A) before the desired end point.

2. Press \( \text{ESC} \).
   The number of pressing varies depending on the programming method.

3. Select \( \text{[ ]} \) with \( \text{△▽<→>} \) and press \( \text{[ ]} \).

4. Move the work clamp with \( \text{△▽<→>} \) for the stitch length. Press \( \text{[ ]} \) when the needle point is at point B of the pattern.
   Point B is programmed.

5. Press \( \text{ESC} \).
6. Select [ ] with △ □ △ and press .

7. Move the work clamp with △ □ △. Press  when the needle point is at given point C.

8. Press .

Inputting the end code

1. Select [ ] with △ □ △ and press .

2. Select the end code type with ◀ ▶ and press .

   "111" is selected in the example. Press  and the work clamp returns to the first stitch (point A).

3. Press .

   The work clamp returns to the home position.

Saving

1. Select [ ] with ◀ ▶ and press .

2. Select [ ] with ◀ ▶ and press .

3. Input the data number and press .
4. Press ESC.

## Ending program

1. Press P.
Programming

Creating a line

1. Select \( \) and press \( \) .

2. Input the stitch length and press \( \) .

3. Move the needle with \( \) and press \( \) .

Creating a curve

Increase the number of plotting points to create a smoother curve.
One to 99 points are available for plotting.

1. Select \( \) and press \( \) .

2. Input the stitch length and press \( \) .
3. Move the needle with △▼←→ and press 🛠️.

4. Press 🛠️ twice at the sewing end position.

Creating a circle

The following five options are available for creating a circle.

- Creating a circle by specifying 3 points on the circumference
- Creating a circle of the specified diameter in the clockwise direction
- Creating a circle of the specified diameter in the counterclockwise direction
- Creating a circle of the specified radius in the clockwise direction
- Creating a circle of the specified radius in the counterclockwise direction

1. Select 🛠️ and press 🛠️.

2. Select the method of creating a circle and press 🛠️.
If ○ is selected

1. **Input the stitch length and the overlap stitch count, then press ✓.**
   Values of 0 - 9 are available for input.

   - Stitch length
   - Stitch count for overlap sewing
   - Press ▲▼ for selection.

2. **Move the needle with ▲▼◄► to select the second point, then press ✓.**

   - Remaining plot count
   - Distance from the previous point in the direction of X or Y axis

3. **Select the third point, then press ✓.**

   - Stitch length
   - Stitch count for overlap sewing
If the stitch length and the overlap stitch count are selected, then press \( \text{△} \).

1. Input the stitch length and the overlap stitch count, then press \( \text{△} \).

Values of 0 - 9 are available for input.

2. Move the needle with \( \text{△} \) and press \( \text{△} \).

Creating an arc

1. Select the arc and press \( \text{△} \).

2. Input the stitch length and press \( \text{△} \).

3. Move the needle with \( \text{△} \) to select the second point, then press \( \text{△} \).
4. Select the third point and press \( \text{ } \).
Creating a zigzag circle

The following five options are available for creating a zigzag circle.

- Creating a zigzag circle by specifying 3 points on the circumference
- Creating a zigzag circle of the specified diameter in the clockwise direction
- Creating a zigzag circle of the specified diameter in the counterclockwise direction
- Creating a zigzag circle of the specified radius in the clockwise direction
- Creating a zigzag circle of the specified radius in the counterclockwise direction

1. Select and press .

2. Select an option of creating a zigzag circle, then press .

If is selected

1. Input the zigzag stitch width, stitch length and the overlap stitch count, then press .
   Values of 0 - 9 are available for input.

2. Move the needle with to select the second point and press .

Press for selection.
3. Select the third point and press \( \text{○} \).

![Image of programming options]

If \( \text{○} \) are selected

1. Input the zigzag stitch width, stitch length and the overlap stitch count, then press \( \text{○} \).
   
   Values of 0 - 9 are available for input.

   ![Image of zigzag stitch input options]

2. Move the needle with \( \text{△} \text{▼} \text{◄} \text{►} \) to select the second point and press \( \text{○} \).
   
   ![Image of second point selection]

Creating a zigzag stitch

The following three options are available for zigzag stitch.

- Creating a zigzag stitch on the sewing path
- Creating a zigzag stitch on the left side of the sewing path
- Creating a zigzag stitch on the right side of the sewing path

One to 99 points are available for plotting.

1. Select \( \text{△} \text{▼} \text{◄} \text{►} \) and press \( \text{○} \).
   
   ![Image of programming options]
2. Select the type of zigzag stitch and press \( \text{\( \mathcal{Z} \)} \).

3. Input the stitch width and stitch length, then press \( \text{\( \mathcal{Z} \)} \).

4. Move the needle with \( \text{\( \mathcal{A} \text{\( \mathcal{D} \)} \text{\( \mathcal{D} \)} \), then press \( \text{\( \mathcal{Z} \)} \).

5. Press \( \text{\( \mathcal{Z} \)} \) twice at the sewing end position.
**Ending programming**

When programming is completed, input an end code.

The following six end codes are available.

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>111</td>
<td>Normal end</td>
</tr>
<tr>
<td>112</td>
<td>Fixing the sewing speed at 1000 spm or lower</td>
</tr>
<tr>
<td>113</td>
<td>No carrying out thread removal</td>
</tr>
<tr>
<td>114</td>
<td>Setting the sewing speed at 1000 spm or lower without thread removal</td>
</tr>
<tr>
<td>115</td>
<td>Carrying out no thread breakage</td>
</tr>
<tr>
<td>116</td>
<td>Fixing the sewing speed at 1500 spm or lower</td>
</tr>
</tbody>
</table>

1. **Select** and press .

2. **Select the end code with**, then press .
**Creating needle drop data**

Create needle drop data for the current needle position.

1. Select ![image](image1) and press ![image](image2).

2. Move the needle with ![image](image3), then press ![image](image4).

**Creating feed data**

Create (feed) data to move the needle to the next position without needle drop at the current position.

1. Select ![image](image5) and press ![image](image6).

2. Move the needle with ![image](image7), then press ![image](image8).
Creating basting data

Create basting data.

1. Select and press .

2. Move the needle with , then press .

Creating split data

Specify breakpoints for sewing a series of different patterns.

1. Select and press .

2. Use to specify whether to stop the needle at the lower end or not, then press .

- ON: The needle stops at the lower end. Thread breakage is not carried on.
- OFF: The needle stops at the upper end. Thread breakage is carried on.
Creating magnified data

Input small patterns in magnified sizes.

Three magnification scales of x2, x5 and x10 are available. Prepare pattern sheets suitable for the magnified patterns. Press \( \text{ESC} \) or \( \text{C} \) to contract the magnified data.

1. Select \( \text{ В } \) and press \( \text{J} \).

2. Select magnification and press \( \text{J} \).

3. Move the needle with \( \text{A} \text{V} \text{<} \text{> } \), then press \( \text{J} \).

4. Press \( \text{ESC} \) or \( \text{C} \).
Carrying out double stitch

The following six options are available for double stitch.

- Creating double stitch data in the reverse direction to the left side of the sewing path
- Creating double stitch data in the reverse direction to the right side of the sewing path
- Creating double stitch data in the same direction to the left side of the sewing path
- Creating double stitch data in the same direction to the right side of the sewing path
- Offsetting double stitch data to the left side of the sewing path
- Offsetting double stitch data to the right side of the sewing path

If sharp angles or fine curves are included in the pattern sheet, the desired double stitch may not be achieved.

1. Select \( \text{ } \) and press \( \text{ } \).

2. Select the type of double stitch and press \( \text{ } \).

3. Input the stitch length and the double stitch width, then press \( \text{ } \).

4. Move the needle with \( \text{ } \), then press \( \text{ } \).
5. Press \( \text{button} \) at the sewing end position.

An alarm sounds after \( \text{button} \) is pressed twice. After the alarm, press \( \text{button} \) again.

Then an alarm sounds and the double stitch pattern is calculated. When the alarm stops, the needle moves in the order of \( A \rightarrow B \rightarrow C \rightarrow D \). The program is completed when the needle comes to \( D \).
Displaying the data image during programming

A data image is displayed during programming.

1. Select \[\text{\textcircled{1}}\] and press \[\text{\textcircled{f}}\].

The pattern image is displayed. Press \[\text{ESCE}\] or \[\text{c}\] to return to the main menu.

Displays the stitch count.

Press \[\text{c}\] to display the overall sewing area.

Displays the horizontal length.

Displays the longitudinal length.

Press \[\text{c}\] to display the overall view of data.
Checking the program setting and setting attribute

Refer to "Checking the program setting and setting attribute" (page 107).

Editing the current data

The following options are available as editing functions.

<table>
<thead>
<tr>
<th><strong>Action</strong></th>
<th><strong>Description</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Moving data of the needle positions after the current position in parallel by feeding</td>
<td></td>
</tr>
<tr>
<td>Moving data of the needle positions after the current position in parallel by sewing with the specified pitch</td>
<td></td>
</tr>
<tr>
<td>Moving data of the needle positions after the current position in parallel</td>
<td></td>
</tr>
<tr>
<td>Copying repeatedly the previous data on the current and the following needle positions</td>
<td></td>
</tr>
<tr>
<td>Copying the previous data symmetrically to the Y axis on the current and the following needle positions</td>
<td></td>
</tr>
<tr>
<td>Copying the previous data symmetrically to the X axis on the current and the following needle positions</td>
<td></td>
</tr>
<tr>
<td>Copying the previous data symmetrically to a point on the current and the following needle positions</td>
<td></td>
</tr>
<tr>
<td>Copying the previous data in the reverse direction on the current and the following needle positions</td>
<td></td>
</tr>
<tr>
<td>Changing the stitch length or the number or lines for a multiple stitch</td>
<td></td>
</tr>
</tbody>
</table>

Adjust the needle position before editing.
Refer to "Checking the program setting and setting attribute" (page 107) for adjustment.

1. **Select** and press .

![Diagram of editing options]
If is selected

1. Adjust the destination with \( \Delta \llcorner \lrcorner \), then press \( \downarrow \).

\[
\begin{array}{c}
\Delta \llcorner \lrcorner \\
1.70 \text{mm} \quad \Delta \llcorner \lrcorner \\
2.20 \text{mm}
\end{array}
\]

If is selected

1. Input the stitch length, then press \( \downarrow \).

\[
PITCH \quad 2.0 \text{mm}
\]

2. Adjust the destination with \( \Delta \llcorner \lrcorner \), then press \( \downarrow \).

\[
PITCH \quad 2.0 \text{mm} \\
\begin{array}{c}
\Delta \llcorner \lrcorner \\
3.20 \text{mm} \quad \Delta \llcorner \lrcorner \\
4.20 \text{mm}
\end{array}
\]

If is selected

1. Adjust the destination with \( \Delta \llcorner \lrcorner \), then press \( \downarrow \).

\[
\begin{array}{c}
\Delta \llcorner \lrcorner \\
0.00 \text{mm} \quad \Delta \llcorner \lrcorner \\
-2.90 \text{mm}
\end{array}
\]

Distance from the previous point in the direction of X or Y axis
If [ ] [], [ ] [], [ ] [], or [ ] is selected

Data chunks separated with feed data are copied.

If the number of ignored boundary feeds is 0:

Data unit C is copied.

If the number of ignored boundary feeds is 1:

Data units B and C are copied.

If the number of ignored boundary feeds is 2:

Data units A, B and C are copied.

1. **Input the number of feed boundaries to be neglected.**
   Inputting 99 ignores all boundaries.

2. **Press [ ] .**
Deleting a part of data

Adjust the needle position before deletion.

1. Select and press .

2. Input the stitch count to delete.

3. Press to delete data following the current needle position for the input count. Press to delete data prior to the current needle position.

The corresponding data is deleted.
Setting low-speed sewing

Carries out setting for low-speed sewing.

The following five options are available for low-speed sewing.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 (Low-speed 0)</td>
<td>Sewing speed is not reduced. (Used for canceling other options.)</td>
</tr>
<tr>
<td>1 (Low-speed 1)</td>
<td>The maximum sewing speed is set at 1200 spm or lower.</td>
</tr>
<tr>
<td>2 (Low-speed 2)</td>
<td>The maximum sewing speed is set at 800 spm or lower.</td>
</tr>
<tr>
<td>3 (Low-speed 3)</td>
<td>The maximum sewing speed is set at 600 spm or lower.</td>
</tr>
<tr>
<td>4 (Low-speed 4)</td>
<td>The maximum sewing speed is set at 400 spm or lower.</td>
</tr>
</tbody>
</table>

1. Select [ ] and press .

2. Select an option of low-speed sewing with .

3. Input the stitch count for sewing with the reduced maximum speed.

4. Press .

Low-speed sewing is carried out for the input stitch count.
### Inputting the trigger

Input the trigger for the extended option output.

Adjust the needle position before inputting the trigger and setting attribute.

Refer to "Checking the program setting and setting attribute" (page 107).

1. **Select** and press .

2. **Input the option output number.**

3. **Move with , then use to specify whether to stop the machine or not.**

   **ON:** The needle stops at the upper end without thread breakage, and restarts after output of the extended option.
   **OFF:** Sewing does not stop.
Chapter 2 Programming with Help Function

Creating a multiple stitch

1. Select and press .

2. Input the stitch length and the number of lines for a multiple stitch. Press .

3. Move the needle point with and press .

4. When the needle point has reached the end point, press three times.

A buzzer sounds. Calculation is performed based on the input data. A buzzer stops on completion of programming.
Modifying the program of a multiple stitch

When modifying the stitch length or the number of lines for a multiple stitch, the previously created curve program can be used.

The previously created programs are required for modifying programs of multiple stitch.

Programs of multiple stitch written to floppy disks cannot be modified.

1. **Select** and press .

2. Press .

   The work clamp moves. When the needle point is at the start point for a multiple stitch, stop it by pressing .

3. **Press** .

4. **Select** and press .

5. **Select** and press .

6. **Input the stitch length and the number of lines.** Press .

   Calculation is performed based on the input data. When a buzzer stops, the needle point moves to the end point for a multiple stitch.
Displaying a pattern image

A data image is displayed during programming or editing.

1. Select 图片 and press 图片.

   

   The pattern image is displayed. Press 图片 or 图片 to return to Main menu.

   Displays the stitch count.

   表示长度。

2. Press 图片 to display the overall sewing area.

   Displays the lateral length.

   Displays the longitudinal length.

3. Press 图片 to display the overall view of data.
Checking the program setting and setting attribute

The following items are displayed.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>End code</td>
<td></td>
</tr>
<tr>
<td>Current needle position/Total stitch count</td>
<td></td>
</tr>
<tr>
<td>Distance from the previous position in the X and Y axial directions</td>
<td></td>
</tr>
<tr>
<td>Stitch data type and availability of the option output, low-speed</td>
<td>Displayed at points where stitch is set.</td>
</tr>
<tr>
<td>sewing(*)</td>
<td></td>
</tr>
<tr>
<td>Feed data type and availability of the option output, with/without</td>
<td>Displayed at points where feed data is set.</td>
</tr>
<tr>
<td>thread</td>
<td></td>
</tr>
<tr>
<td>Needle stop position of the split data (*)</td>
<td>Displayed at points where split data is set.</td>
</tr>
<tr>
<td>Extended option output no. of the trigger data and with/without</td>
<td>Displayed at points where trigger is set.</td>
</tr>
<tr>
<td>machine stoppage (*)</td>
<td></td>
</tr>
</tbody>
</table>

Attribute of items marked with * are available for setting.

An example of stitch data is shown below.

1. Select  or  and press .

Selecting from the main menu
Checking each stitch

1. Press ➩ to move forward, ◄ to backward.
   The needle steps by each stitch and the setting of the data is displayed.

Checking a series of stitches automatically

1. Input the stitch count to check.
2. Press ➩ to move forward, ◄ to backward.
   The needle moves by the input count and the setting of the data is displayed.
   Input “999” to check all stitches.

Skipping

1. Input the stitch count to the destination.
2. Press ➩, then press ➩ to move forward and ◄ to move backward.
   The needle skips sewing according to the input stitch count.
   Input “999” to skip sewing to the sewing end position or to a breakpoint.

Setting the attribute (stitch data)

1. Move to the desired needle position and press ➩.
   The attribute setting screen appears.
2. **Set the attribute.**

   - Option output
     - Press \( \text{\textbullet} \) \( \text{\textbullet} \) to mark with \( \text{\textbullet} \).

   - Slow conversion
     - Press \( \text{\textbullet} \) \( \text{\textbullet} \) for type selection.

   - Press \( \text{\textbullet} \) \( \text{\textbullet} \) for selection.

3. **Press \( \text{\textbullet} \) after setting.**

   The screen returns to the confirmation screen.

---

**Setting the attribute (feed data)**

1. **Move to the desired needle position and press \( \text{\textbullet} \).**

   The attribute setting screen appears.

2. **Set the attribute.**

3. **Press \( \text{\textbullet} \) after setting.**

   The screen returns to the confirmation screen.
Setting the attribute (split data)

1. Move to the desired needle position and press \( \text{\textbullet} \) .

   The attribute setting screen appears.

   ![Attribute Setting Screen]

2. Set the attribute.

   ![Attribute Setting Details]

   Stoppage of the needle at the lower end
   Press \( \text{\textbullet} \) to select ON/OFF.

3. Press \( \text{\textbullet} \) after setting.

   The screen returns to the confirmation screen.

   ![Confirmation Screen]

Setting the attribute (trigger data)

1. Move to the desired needle position and press \( \text{\textbullet} \) .

   The attribute setting screen appears.

   ![Attribute Setting Screen]

2. Set the attribute.

   ![Attribute Setting Details]

   Extended option output trigger
   Press \( \text{\textbullet} \) or \( \text{\textbullet} \) to select the number.

   Machine stop
   Press \( \text{\textbullet} \) to select ON/OFF.

3. Press \( \text{\textbullet} \) after setting.

   The screen returns to the confirmation screen.

   ![Confirmation Screen]
Editing program

Edit the retrieved or created data.

The following options are available as editing functions.

- Moving a pattern in parallel. (Changes the sewing start position.)
- Moving a pattern symmetrically to the Y axis
- Moving a pattern symmetrically to the X axis
- Moving a pattern symmetrically to a point
- Resizing a pattern
- Copying a resized pattern
- Rotating a pattern clockwise
- Copying a pattern rotated clockwise
- Rotating a pattern counterclockwise
- Copying a pattern rotated counterclockwise

1. Select and press.

2. Select an editing function and press.

If is selected

1. Adjust the distance in the X and Y directions with.

2. Press.
If  or  is selected

1. Press .
   The pattern is moved symmetrically to the sewing start position.

2. Input resizing scale in the X and Y directions.
   Switch between X and Y directions with .
   Resizing scale between 0 and 400% are available.

3. Press .

4. Use  to change the reference position for resizing.

5. Press .

If  is selected

1. Input resizing scale in the X and Y directions.
   Switch between X and Y directions with .
   Resizing scale between 0 and 400% are available.

2. Input the stitch length.
   Switch between input fields of stitch length with .
   If the stitch length is 0.0, the pattern is resized with the same number of stitches as the original data.

3. Press .

4. Use  to change the reference position for resizing.

5. Press .
If [□] is selected

Data chunks separated with feed data are resized and copied.

If the number of feed boundaries to be ignored is 0:

Only A is copied.
A’ becomes a split program.

If the number of feed boundaries to be ignored is 1:

A and B are copied.
A’ and B’ become split programs.

If the number of feed boundaries to be ignored is 2:

1. Input resizing scale in the X and Y directions.
   Switch between X and Y directions with △▽ .
   Resizing scale between 0 and 400% are available.

2. Input the stitch length.
   Switch between the input fields of stitch length with ◀▶ .
   If the stitch length is 0.0, the pattern is resized with the same number of stitches as the original data.
3. **Input the number of the feed boundaries to be ignored and press [0].**
   Inputting 99 ignores all boundaries.

4. **Use [△][▽]<[←]> to change the reference position for resizing.**
   If no reference position is specified, the home position is used as the reference.

5. **Press [0].**
   The copied data is added as split data.

**If [△] or [▽] is selected**

1. **Input the angle of rotation and press [0].**

2. **Adjust the reference position for rotation with [△][▽]<[←]>, then press [0].**
If [ ] or [ ] is selected

1. Input the angle of rotation and number of feed boundaries to be ignored, then press .
   Inputting 99 ignores all boundaries. Refer to "If [ ] is selected" (page 113.)

2. Adjust the reference position with and press .
Deleting data

Delete the current program data.

1. Press ESC or C and return to Main menu.

2. Select and press .

3. Check the screen and press .
   Press ESC to cancel this command.
Chapter 3
Programming with Command Function
Please read before programming

Pressing a designated combination of keys will issue a command to the programmer. These key combinations are called 'command'. This chapter describes the method of programming with command.

Panel description and usage

Cancels an image display.

Lights when the feed is set.

Press this key for smoothing or editing.

Deletes a part of the data.

Press this key to create a line or a circle.

Press this key to start or end a program. “Turning power OFF” (Refer to page 11.)

Press this key to display the data image being created.

Press these keys to input numerical values.

Press this key to cancel operation.

Press this key to input an end code.

Press these keys to advance steps.

Press this key to set the needle position or use this key as a part of a command.

Press these keys to move the needle.
Display screen

Press 🡆 and the following screen appears.

If the screen is not displayed, press 🡆.

Programming flowchart

Programming

Position the sewing start position and press 🡆.

Input the command for programming.
(Refer to page 161.)

Combine straight lines, curves and other figures to make patterns to the pattern sheet. After completing each pattern, press 🡆. The data is available until deletion.

Input end code.
(Refer to page 179.)
Editing

Move to the home position or the needle position for editing.

Input command for editing.
(Refer to page 180.)

Checking and setting

Move to the needle position for editing.

Input command and carry out setting.
# Description of commands

## Moving needle point

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>

</tbody>
</table>
Ending input for a curve
Carrying out zigzag stitch symmetrically to the sewing path
Carrying out double stitch on the left side to the sewing path
Carrying out parallel stitch on the left side to the sewing path
Carrying out offset on the left side to the sewing path

Specify split points (for sewing different patterns separately in a sequence) after feed

Moving in parallel for the feed

Creating split data after basting data

Creating basting data

### Editing data

##### Moving a pattern symmetrically to the Y axis

##### Moving a pattern symmetrically to the X axis

##### Moving a pattern symmetrically to a point

##### Modifying a multiple stitch. Input the number of lines for a multiple stitch in 🟢.

##### Rotating a pattern clockwise

##### Rotating a pattern counterclockwise

##### Copying a pattern clockwise

##### Copying a pattern counterclockwise

##### Resizing a pattern. Input the magnification in the X direction by 🟢, and in the Y direction by 🟢.

##### Resizing and copying a pattern. Input the magnification in the X direction by 🟢, and in the Y direction by 🟢.

##### Repeated copying

##### Copying a pattern symmetrically to a point

##### Copying a pattern symmetrically to the X axis

##### Copying a pattern symmetrically to the Y axis

##### Copying in the reverse direction

##### Moving data in parallel before the current needle position (changing the moving amount data of the needle position)

##### Moving data in parallel after the current needle position (using needle drop data to the moved position)

### Setting attribute

##### Setting the number of feed boundaries to be ignored (0 - 99)
### Chapter 3 Programming with Command Function

**2 3 0**
Stopping the needle at the upper end (only when the needle position is at split)

**2 3 1**
Stopping the needle at the lower end (only when the needle position is at split)

**6 6 6**
The maximum sewing speed becomes 400 spm or lower.

**6 6 7**
The maximum sewing speed becomes 1200 spm or lower.

**6 6 8**
The maximum sewing speed becomes 800 spm or lower.

**6 6 9**
The maximum sewing speed becomes 600 spm or lower.

**6 8 0**
Cancels low speed data setting

**7 7 1**
Turns on option output 1.

**7 7 2**
Turns on option output 2.

**7 7 3**
Turns on option output 3.

**7 7 0**
Turn off all option outputs.

**9 8 0**
Not breaking thread for feed (only when the needle position is at feed)

**9 8 1**
Breaks thread for feed (only when the needle position is at feed)

### Other operations

Programming example

Frequently used programming method is explained here. Refer to "Programming" (page 161) for function and operation of each icon.

Programming for each stitch

Program each stitch according to the pattern. The example in the left is used for explanation.

Programming

1. Press P.  
The work clamp moves to the home position and the programmer screen is displayed.

2. Move the work clamp with △▽□↓. Press L when the needle point is at point A of the pattern.  
The first stitch (point A) is programmed.

3. Repeat step 2 and create the program to point C.

Inputting the end code

1. Press L at the last stitch and press 1 1 E.  
The work clamp returns to the start position.

Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.
Ending program

1. Press P.

Resizing input

Resizing input is used to program a detailed pattern stitch by stitch. The example in the left is used for explanation of programming the pattern to the magnification of 5.

Programming

1. Press P.

The work clamp moves to the home position and the programmer screen is displayed.

2. Press M9 0 5.

9 is the command for resizing input. Input the magnification (02, 05, 10) in M9.

3. Move the work clamp with △□◧◨. Press L when the needle point is at point A of the pattern.

The first stitch (point A) is programmed.

4. Repeat step 3 and create the program to point D.

Inputting the end code

1. Press L at the last stitch and press E1 1 1.

The work clamp returns to the start position.

Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.
Ending program

1. Press 📻.

Lines

The pattern with lines is programmed. The example in the left is used for explanation of programming.

Programming

1. Press 📻.
   
   The work clamp moves to the home position and the programmer screen is displayed.

2. Move the work clamp with △▽←→. Press 📻 when the needle point is at point A of the pattern.
   
   The first stitch (point A) is programmed.

3. Input the stitch length.
   
   3.0 mm is input in the example.
   
   Input 030 to make the stitch length to 3.0 mm.

4. Press 𝓜.
   
   To change the stitch length, specify the pitch value before pressing 𝓜.

5. Move the work clamp with △▽←→. Press 📻 when the needle point is at point B of the pattern.

6. Repeat steps 4 and 5 and create the program to point E.

Inputting the end code

1. Press 📻 at the last stitch and press 📻 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1...
Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

Ending program

1. Press \( P \).

Curve

A pattern with curves is programmed.

Be sure to press \( 7 \ 8 \ 9 \ L \) for a split at corner points C or E. If a split is not made, the corner will be round.

When a split is made

When a split is not made

More intermediate points such as points B, D, F or G will create smooth curves.

Programming

1. Press \( P \).

   The work clamp moves to the home position and the programmer screen is displayed.

2. Move the work clamp with \( \Delta \ \nabla \ 4 \ 6 \). Press \( L \) when the needle point is at point A of the pattern.

   The first stitch (point A) is programmed.
3. Input the stitch length and press \textbf{M}. \par
3.0 mm is input in the example. \par
Input 030 to make the stitch length to 3.0 mm.

4. Move the work clamp with \textbf{△▽◁▷}. Press \textbf{L} when the needle point is at point B of the pattern.

5. Move the work clamp with \textbf{△▽◁▷}. Press \textbf{7 8 9 L} when the needle point is at point C of the pattern. \par
Point C becomes a sharp corner. The range from points A to C is programmed.

6. Press \textbf{M}. \par
To change the stitch length, specify the pitch value before pressing \textbf{M}.

7. Move the work clamp with \textbf{△▽◁▷}. Press \textbf{L} when the needle point is at point D of the pattern.

8. Repeat step 7 and create the program to point E.

9. Press \textbf{7 8 9 L} as in step 5. \par
The range from points C to E is programmed.

10. Create the program to point I in the similar manner.

\textbf{Inputting the end code}

1. Press \textbf{1 1 1 E}. \par
The work clamp returns to the start position.

\textbf{Saving}

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.
Ending program

1. Press \( P \).

Double stitch

A double stitch is programmed to make two lines with a constant width. The example in the left is used for explanation of a double stitch to the left of sewing direction.

When the line changes from straight to curve or curve to straight as in points B or E, be sure to press \( L7 8 9 \) to make a split.

More intermediate points such as points C or D will create smooth curves.

Programming

1. Press \( P \).

The work clamp moves to the home position and the programmer screen is displayed.

2. Move the work clamp with \( \Delta \nabla < > \). Press \( L \) when the needle point is at point A of the pattern.

The first stitch (point A) is programmed.

3. Press \( 2 3 0 \) and press \( M \).

\( 2 \) is the command for the double stitch. Input the width of the double stitch in \( \square \). 3.0 mm is input in the example.

4. Input the stitch length and press \( M \).

3.0 mm is input in the example.

Input 030 to make the stitch length to 3.0 mm.

5. Create the program to point F in the similar manner of curve program.

If a straight line is present as in the example, press \( 7 8 9 L \) at the end of the line.
I Inputting the end code

1. Press L at the last stitch and press 1 1 1 E. The needle moves to points G and H.

II Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

III Ending program

1. Press P.

Feed

After thread breaking, a feed is set for continuous sewing with the work clamp in position. The example in the left is used for explanation of programming pattern 2 with a feed after pattern 1.

Programming

1. Press P. The work clamp moves to the home position and the programmer screen is displayed.

2. Move the work clamp with ▲▼◄►. Press L when the needle point is at point A of the pattern. The first stitch (point A) is programmed.
3. Program pattern 1.

4. Input point B and press \( F \).

5. Move the work clamp with \( \Delta \nabla \Delta \nabla \). Press \( L \) when the needle point is at point C of the pattern.

6. Program pattern 2.

Inputting the end code

1. Press \( L \) at the last stitch and press \( 1 \ 1 \ 1 \ 1 \ 1 \). The work clamp returns to the start position.

Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

Ending program

1. Press \( P \).
Basting

Basting is programmed. The example in the left is used for explanation of basting programming from point C to point F.

1. Press \( P \).
The work clamp moves to the home position and the programmer screen is displayed.

2. Move the work clamp with \( \Delta \nabla \langle \rangle \). Press \( L \) when the needle point is at point A of the pattern.
The first stitch (point A) is programmed.

3. Repeat step 2 and create the program to point C.

4. Input point C and press \( * * * * * \).
Input the basting command.

5. Move the work clamp with \( \Delta \nabla \langle \rangle \). Press \( L \) when the needle point is at point D of the pattern.

6. Repeat steps 4 and 5 and create the program to point F.

7. Create the program to points G and H as in step 2.
**Inputting the end code**

1. Press \( L \) at the last stitch and press \( 1 \ 1 \ 1 \ L \).
   
   The work clamp returns to the start position.

**Saving**

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

**Ending program**

1. Press \( P \).

**Symmetrical pattern**

A pattern symmetric to the X axis or the Y axis is programmed. After programming the pattern, select the symmetrical pattern type to complete the pattern. The example in the left is used for explanation of programming symmetric to the Y axis.

The following symmetrical pattern types are available:

- **Symmetric to Y axis**
  Use command \( 4 \ 4 \ 2 \ L \).

- **Symmetric to X axis**
  Use command \( 4 \ 4 \ 1 \ L \).

- **Symmetric to point**
  Use command \( 4 \ 4 \ 0 \ L \).

- **Turnover**
  Use command \( 4 \ 4 \ 3 \ L \).
Programming

1. Press \( P \).
   The work clamp moves to the home position and the programmer screen is displayed.

2. Move the work clamp with \( \text{△} \text{▼} \text{◄} \text{►} \). Press \( \text{L} \) when the needle point is at point A of the pattern.
   The first stitch (point A) is programmed.

3. Create the program to point B.

4. Input point B and press \( 4 4 2 \text{L} \).
   Input the command symmetric to Y axis.

5. The needle point moves slowly from point B to point A in the right half and it is automatically programmed. Press \( \text{+} \) to make fast movement.

Inputting the end code

1. Press \( 1 1 1 \text{E} \) when needle stops at point A.
   The work clamp returns to the start position.

Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

Ending program

1. Press \( P \).
Splitting

Different patterns, splitting each pattern in sequence, are programmed. The example in the left is used for explanation of 3 patterns in sequence.

Programming

1. Press P.
   The work clamp moves to the home position and the programmer screen is displayed.

2. Move the work clamp with △▽lez. Press L when the needle point is at point A of the pattern.
   The first stitch (point A) is programmed.

3. Program pattern 1.

4. Input point B and press F.

5. Move the work clamp with △▽lez. Press 7 7 7 7 6 6 6 6 when the needle point is at point C of the pattern.
   To change the pattern, press the pressure holder lift switch and replace the pattern.

6. Program patterns 2 and 3.

Inputting the end code

1. Press L at the last stitch and press 1 1 1 E.
   The work clamp returns to the start position.

Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.
Ending program

1. Press \( P \).

Zigzag stitch

Zigzag stitch is programmed. The example in the left is used for explanation of even width of zigzag stitch on the sewing path.

Zigzag with curves may be programmed.

Programming

1. Press \( P \).

The work clamp moves to the home position and the programmer screen is displayed.

2. Move the work clamp with \( \Delta \nabla \downarrow \uparrow \). Press \( L \) when the needle point is at point A of the pattern.

The first stitch (point A) is programmed.

3. Press \( 730 \) and press \( \text{M} \).

\( 730 \) is the command for the zigzag stitch. Input the width of the zigzag stitch in \( \square \). 3.0 mm is input in the example.

4. Input the stitch length and press \( \text{M} \).

3.0 mm is input in the example.

Input 030 to make the stitch length to 3.0 mm.

5. Move the work clamp with \( \Delta \nabla \downarrow \uparrow \). Press \( 789L \) when the needle point is at point B of the pattern.

Zigzag stitch with even width to the left and the right is programmed.
Inputting the end code

1. Press **E1 1 1**.
   The work clamp returns to the start position.

Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

Ending program

1. Press **P**.

Multiple stitch

This section describes programming of a multiple stitch. Refer to the example on the left.

Programming can be started from either inside or outside line. Embroidering is carried out in the sequence of programming.

Embroidering direction depends on programming sequence.

When embroidering direction should be changed at a sharp angle, a split should be provided in the vicinity of the direction change point for finishing the multiple stitch in relatively uniform conditions.

Up to 200 points can be specified for one side. If you attempt to input 201 or more points, the needle point is automatically returned to the previous points. In that case, start inputting points of the outside (or the inside) line, or reconsider point input positions or pattern.

Creating a stitch pattern

1. Create a pattern in consideration of the most inside and outside lines for a multiple stitch.
   The two lines should be spaced uniformly.
2. Connect each direction change point on the inside line with the matched direction change point on the outside line using a line.

3. Provide one point (or more points) between the above two direction change points, and connect them using a line.
   Follow the procedure for curve points specification.
   Specify points in pairs on the inside and outside lines. The lines should be spaced uniformly.

---

**Programming**

1. Press **P**.
   The work clamp moves to the home position and the programmer screen is displayed.

2. Move the work clamp with △▽◀▶. Press **L** when the needle point is at point 1 of the pattern.
   The first stitch (point 1) is programmed.

3. Press **500** and **M**.
4. Move the work clamp with △▽<→. Press L when the needle point is at point 2 of the pattern.

5. Move the work clamp with △▽<→. Press 7 8 9 L when the needle point is at point 3 of the pattern.
   Be sure to press 7 8 9 L for a split at a corner like point 3. If a split is not made, the corner will be round.

6. Program the following points up to point 7 with the curve programming steps.
   When there is a liner section, move the needle point from the split to the next split, and press 7 8 9 L.
   In the example, a linear line is programmed between points 7 and 8. Be sure to program a linear line also for the matched section between points 8 and 9.
   By pressing 0, the needle point is returned to the previous point. It cannot be returned beyond the previous split.
   By pressing 1, the needle point is returned to the previous split. However, when the needle point is at a split, it cannot be moved.
   By pressing 2, the needle point is returned to the split before the previous split.

7. Press F. Move the work clamp with △▽<→. Press L when the needle point is at point 8 of the pattern.

8. Program the following points up to point 3 in the same manner.
   When programming, be sure that the points and splits specified on the inside line are paired with those on the outside line respectively.
   If there are any points or splits not paired, the needle automatically returns to the previous point. Correct the program.

9. Press 5 and M.
   Input the number of lines for a multiple stitch in □□.
   When the number should be “5”, input “505”.

10. Input the stitch length. Press M.
    “3.0 mm” is input in the example. Input “030” to make the stitch length to 3.0 mm.

11. Press L.
    If the number of lines for a multiple stitch has not been input, a buzzer sounds. Repeat step 9.
Inputting the end code

1. Press 1 1 1 E.
The work clamp returns to the start position.

Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

Ending program

1. Press P.
Example of modified program

This section describes the modification method of the program using examples. Refer to "Programming" (page 161).

Resizing pattern

The programmed pattern is resized. The example in the left is used for explanation.

The center point (reference point) of resizing can be changed. The magnifying direction varies depending on the position of the reference point.

If the reference point is not determined, the pattern is resized to the home position.

If the reference point is determined, the pattern is resized to the reference point.

Calling data

1. Specify the program number on the operation panel and press the read/write switch to read the data.
# Resizing

1. Move the needle to the reference point of resizing with ▲▼◀▶.
   The pattern is resized to the home position if the needle is not moved.

2. Press 8 8 8 and press M.
   Input the resizing command.

3. Press 1 5 0 and press F.
   Input the resizing percentage for the X axis. Specify the magnification percentage by 3 digits in 150%.
   is specified in the example.

4. Press 1 5 0 and press M.
   Input the resizing percentage for the Y axis. Specify the magnification percentage by 3 digits in 150%.
   is specified in the example.

5. Input the stitch length. Press L.
   If the stitch length is 0.0, the pattern is resized with the same number of stitches as the original data.

# Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

# Ending program

1. Press P.
## Changing partially

A part of the programmed pattern is changed. The example in the left is used for explanation of creating 5', 6' and 7'.

### Calling data

1. Specify the program number on the operation panel and press the read/write switch to read the data.

### Moving to position 4.

1. Press 9 9 9 and press . The work clamp moves from the start position by each stitch.

2. When the needle point reaches 4, press . The work clamp stops. If the work clamp passes, input a few stitches and press . The needle returns for a few stitches of the input.

### Programming a new point.

1. Move the work clamp with ⬆️⬇️➡️. Press when the needle point is at 5'. 5' is programmed.

2. Repeat step 1 and program 6' and 7'.

3. Press 1 and press . The needle point moves to 5.
Deleting unnecessary points

1. Press C.

2. Input the number of stitches to be deleted and press +.
The example is deleting 3 stitches ahead. Press 3 +.

3. The needle point moves to 6, 7 and 8. Points 5, 6 and 7 are deleted.

Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

Ending program

1. Press P.

Deleting the first stitch

The first stitch of the programmed pattern is deleted. The example in the left is used for explanation of deleting 1 and setting 2 for the sewing start position.

Calling data

1. Specify the program number on the operation panel and press the read/write switch to read the data.
Moving to position 1.

1. Press 1 and press .
   The work clamp moves to the start position.

Deleting 1

1. Press .

2. Input the number of stitches to be deleted and press .
   The example is deleting 1 stitch ahead. Press 1 .

3. The needle point moves to 2.

Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

Ending program

1. Press .
Changing the first stitch position

The position of the sewing start position is changed. The example in the left is used for explanation of moving the sewing start position from 1 to 1'.

Calling data

1. Specify the program number on the operation panel and press the read/write switch to read the data.

Moving to position 1.

1. Press 1 and press .
The work clamp moves to the start position.

Programming a new point.

1. Move the work clamp with . Press L when the needle point is at 1' of the pattern.
1' is programmed.

Deleting 1

1. Press 1 and press .
The needle point returns to the first stitch.

2. Press C.

3. Input the number of stitches to be deleted and press .
The example is deleting 1 stitch. Press 1.
4. The needle point moves to 1'.

### Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

### Ending program

1. Press 🎊.

### Adding sewing point before the first stitch

A point is added before the current sewing point to change the sewing start position. The example in the left is used for explanation of changing the sewing start position from 1 to 1'.

### Calling data

1. Specify the program number on the operation panel and press the read/write switch to read the data.

### Moving to position 1.

1. Press 1 and press 🎊. The work clamp moves to the start position.
Programming a new point.

1. Press \( \mathbf{F} \).

2. Move the work clamp with \( \Delta \nabla \langle \rangle \) so that the needle point is at 1' of the pattern. Record the coordinates (values of X and Y).

3. Press \( \mathbf{L} \). 1' is programmed.

4. Move the work clamp with \( \Delta \nabla \langle \rangle \) to the opposite position of coordinates recorded in step 2 and press \( \mathbf{L} \). If the moving distance is long, press \( \mathbf{LII} \).

5. Press \( \mathbf{R} \). The work clamp returns to the home position.

Deleting 1

1. Press 1 and press \( \mathbf{+} \). The needle point returns to the first stitch.

2. Press \( \mathbf{C} \).

3. Input the number of stitches to be deleted and press \( \mathbf{+} \). The example is deleting 1 stitch. Press 1 \( \mathbf{+} \).

4. The needle point moves to 1'.

Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

Ending program

1. Press \( \mathbf{P} \).
Adding escape point before the first stitch

An escape point is added before the sewing start position. The example in the left is used for explanation of setting escape point A.

The escape point is a provisional point provided for prevention of the work clamp interference with the needle or the bar leg when the work clamp is lifted at the start point.

Calling data

1. Specify the program number on the operation panel and press the read/write switch to read the data.

Moving to position 1.

1. Press and press .
   The work clamp moves to the start position.

Programming a new point.

1. Press .

2. Move the work clamp with so that the needle point is at A of the pattern.
   Record the coordinates (values of and ).

3. Press .
   A is programmed.

4. Press .

5. Move the work clamp with to the opposite position of coordinates recorded in step 2 and press .
Deleting 1

1. Press \( \text{key 2} \) and press \( \text{key } - \).
   The needle point moves to the first stitch, point A and the first stitch.

2. Press \( \text{key C} \).

3. Input the number of stitches to be deleted and press \( \text{key +} \).
   The example is deleting 1 stitch. Press \( \text{key 1, key +} \).

4. The needle point moves to A.

Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

Ending program

1. Press \( \text{key P} \).
**Moving the escape point**

The position of the escape point is moved. The example in the left is used for explanation of moving the escape point from A to B.

---

**Calling data**

1. Specify the program number on the operation panel and press the read/write switch to read the data.

---

**Moving to position A.**

1. Press 1 and press +.

   The work clamp moves to the escape point.

---

**Programming a new point.**

1. Press .

2. Move the work clamp with △▽◀▶. Press ▼ when the needle point is at B of the pattern.

   B is programmed.

---

**Deleting 1**

1. Press 1 and press -.

   The needle point returns to A.

2. Press C.

3. Input the number of stitches to be deleted and press ▶.

   The example is deleting 1 stitch. Press 1 ▶.
4. The needle point moves to B.

## Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

## Ending program

1. Press \( \text{P} \).

## Deleting the escape point

The escape point is deleted. The example in the left is used for explanation of deleting A.

## Calling data

1. Specify the program number on the operation panel and press the read/write switch to read the data.

## Moving to position A.

1. Press \( \text{1} \) and press \( \text{+} \). The work clamp moves to the escape point.
Deleting A

1. Press \( C \).

2. Input the number of stitches to be deleted and press \( C \).
   
   The example is deleting 1 stitch. Press \( 1 \) \( C \).

3. The needle point moves to 1.

Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

Ending program

1. Press \( P \).

Moving the pattern in parallel 1

The program data is moved in parallel. The example in the left is used for explanation of moving the pattern in parallel when the first stitch is the sewing start position.

Calling data

1. Specify the program number on the operation panel and press the read/write switch to read the data.
Moving in parallel

1. Move the work clamp with△▼←→. Press L when the needle point is at A of the pattern.

Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

Ending program

1. Press P.

Moving the pattern in parallel 2

The program data is moved in parallel. The example in the left is used for explanation of moving the pattern in parallel when the first stitch is the escape point.

Calling data

1. Specify the program number on the operation panel and press the read/write switch to read the data.

Moving

1. Press 2 and press ●. The needle point moves to point A.
2. Move the work clamp with △▼◄► so that the needle point is at B of the pattern.
   Record the coordinates (values of X and Y).
   If the moving distance is long, press F before movement.

3. Press R.
   The work clamp moves to the home position.

4. Press 1 and press +.
   The needle point moves to point C.

5. Move the work clamp with △▼◄► for the coordinates recorded in step 2.
   The moved point is now D.
   If the moving distance is long, press F before movement.

6. Turn the pulley with a hand and put a marking with the needle to indicate the position of point D.

7. Turn the pulley with a hand and move the needle to the top point.

8. Press R.
   The work clamp returns to the home position.

9. Move the work clamp with △▼◄►. Press L when the needle point is at D of the pattern.

Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

Ending program

1. Press P.
Deleting a part of the program during programming

A program can be modified during programming. The example in the left is used for explanation of deleting 2 stitches at 8 and creating a new program.

1. Press \( C \).
2. Input the number of stitches to be deleted and press \( C \).
   The example is deleting 2 stitches backward. Press \( 2 \).
3. The needle point moves to 6.
4. Continue programming.

Moving a part of continuous program in parallel

A part of continuous program is moved in parallel. The example in the left is used for explanation of moving patterns B and C in parallel.

Calling data

1. Specify the program number on the operation panel and press the read/write switch to read the data.
Moving to position 1

1. Press 9 9 9 and press .
The work clamp moves from the start point by each stitch.

2. Press when the needle is at 1.
The work clamp stops. If the work clamp passes, input a few stitches and press . The needle returns for a few stitches of the input.

Moving in parallel

1. Press 7 7 7 and press .
   Input the command for parallel movement.

   ![Parallel Movement Command](image)

2. Move the work clamp with △▽◀▶. Press when the needle point is at 2 of the pattern.
   If pattern C is present after pattern B, pattern C is automatically moved in parallel. If this is not preferred, move pattern C in parallel as in steps 11 and 12.

Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

Ending program

1. Press .
Canceling thread breakage at the last stitch

Addition of feed after the last point can cancel thread breakage at the last stitch.

When "115" is input for the end code, the thread breakage does not occur. In this case, every thread breakage including emergency stop is canceled. Carry out the following setting for canceling thread breakage at the specified point.

Programming

1. Create the program 1 stitch (A) before the desired end point.

2. Press 999 and press F.

3. Move the work clamp with △▽◁▷ for the stitch length. Press L when the needle point is at point B of the pattern.
Point B is programmed.

4. Press F.

5. Move the work clamp with △▽◁▷. Press L when the needle point is at given point C.

Inputting the end code

1. Press L and press 111 E.
Saving

1. Specify the program number on the operation panel and press the read/write switch for writing into the floppy disk.

Ending program

1. Press 📅.
Chapter 3 Programming with Command Function

Programming

Creating a line

Command to be used

<table>
<thead>
<tr>
<th>Example</th>
<th>Pitch</th>
<th>Input</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.5 mm</td>
<td>005</td>
<td></td>
</tr>
<tr>
<td>12.0 mm</td>
<td>120</td>
<td></td>
</tr>
</tbody>
</table>

1. Select the sewing start position with △▽◁▷ and press L.

2. Input the stitch length in 3 digits and press L.

3. Move the needle with △▽◁▷ and press L.
Creating a curve

Command to be used

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>▲▼◄►</td>
<td>Input the stitch length in ▲▼◄►.</td>
</tr>
</tbody>
</table>

Example Pitch Input

<table>
<thead>
<tr>
<th>Pitch</th>
<th>Input</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.5mm</td>
<td>005</td>
</tr>
<tr>
<td>12.0mm</td>
<td>120</td>
</tr>
</tbody>
</table>

7 8 9 L

This command represents completing creation of a curve.

Increase the number of plotting points to create a smoother curve.
One to 99 points are available for plotting.

1. Select the start point with ▲▼◄► and press  L.

2. Input the stitch length in 3 digits and press  M.

3. Move the needle with ▲▼◄► and press  L.

4. Input 7 8 9 L at the end position of the needle.
Creating a circle (zigzag circle) by specifying 3 points

Command to be used

- **2 0 0 L**
  
  Input the overlap stitch counts in . Values 0 - 9 are available for input.

- **7 0 0 M**
  
  Input this command to create a zigzag circle. Input the zigzag width in .
  
  The zigzag width can be specified from 1.0 - 25.5 mm.
  
  To specify the width of 10.0 mm or more, input and input the width in 3 digits, then press .

  Example: Pitch Input
  
  - 3.5mm 7 3 6 M
  - 18.0mm 7 0 0 M 1 8 0 M

- **0 0 0 M**
  
  Input this command to create a zigzag circle. Input the zigzag stitch length in .

  Example: Pitch Input
  
  - 0.5mm 005
  - 12.0mm 120

1. Select the sewing start position with and press .

2. Input .

3. Input the stitch length in 3 digits and press .
Creating a zigzag circle (go to 6 when not creating a zigzag circle)

4. Input ▼ ▼ ▼ (width).

<table>
<thead>
<tr>
<th>X</th>
<th>Y</th>
<th>PITCH</th>
</tr>

<td>Input this command to create a zigzag circle. Input the zigzag stitch length in 0 - 9. “Creating a circle (zigzag circle) by specifying 3 points” (Refer to page 163.)</td>
</tr>
</tbody>
</table>

1. Select the sewing start position with △▽lez and press L.

2. Input 2 1 1 2 or 2 2 1 2.

3. Input the stitch length in 3 digits and press L.
Creating a zigzag circle (go to 6 when not creating a zigzag circle)

4. Input 7 6 5 5 (width).

5. Input the zigzag stitch length in 3 digits and press M .

6. Move the needle with △▼◁▷ to select the second point and press L .

Creating a circle (zigzag circle) by specifying the radius

Command to be used

2 3 ▼ Creating a circle clockwise. Input the overlap stitch counts in ▼ .
Values 0 - 9 are available for input.

2 4 ▼ Creating a circle counterclockwise. Input the overlap stitch counts in ▼ .
Values 0 - 9 are available for input.

7 ▼ Input this command to create a zigzag circle. Input the width of zigzag in ▼ .
"Creating a circle (zigzag circle) by specifying 3 points" (Refer to page 163.)

1. Select the sewing start position with △▼◁▷ and press L .
2. Input 123 or 14.

![Table Image]

3. Input the stitch length in 3 digits and press L.

![Table Image]

Creating a zigzag circle (go to 6 when not creating a zigzag circle)

4. Input ? (width).

![Table Image]

5. Input the zigzag stitch length in 3 digits and press M.

![Table Image]

6. Move the needle with △▴<(right) to select the second point and press L.

![Table Image]
Creating an arc

Command to be used

Creating an arc passing 3 points.

1. Select the sewing start position with △▽□□ and press L.

2. Input □□□□.

3. Input the stitch length in 3 digits and press L.

4. Move the needle with △▽□□ to select the second point, then press L.

5. Move the needle with △▽□□ to select the third point, then press L.
Creating a semicircle

Command to be used

| 3 1 0 [L] | Creating a semicircle clockwise. |
| 3 2 0 [L] | Creating a semicircle counterclockwise. |

1. Select the start point with △ ▽ ◄ ► and press [L].

2. Input [3 1 0 [L]] or [3 2 0 [L]].

3. Input the stitch length in 3 digits and press [L].

4. Move the needle with △ ▽ ◄ ► to select the second point, then press [L].
Creating a zigzag stitch

Command to be used

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>M7</td>
<td>Input this command to create a zigzag stitch. Input the width of zigzag in &quot;Creating a circle (zigzag circle) by specifying 3 points&quot; (Refer to page 163.)</td>

<tr>
<td>M</td>
<td>Input this command to create a zigzag stitch. Input the zigzag stitch length in &quot;Creating a circle (zigzag circle) by specifying 3 points&quot; (Refer to page 163.)</td>
</tr>
</tbody>
</table>

1. Select the sewing start position with △▼<< and press L.

2. Input M7 (width).

3. Input the stitch length in 3 digits and press M.

4. Move the needle with △▼<< to select the second point, then press L.

5. Input 7 8 9 L at the end position of the needle.

   Input 7 8 9 L for the left side and 7 9 7 L for the right side.
Creating a multiple stitch

Commands to be used

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>M5</td>
<td>Input the start point for a multiple stitch.</td>
</tr>
<tr>
<td></td>
<td>Ex.) The number of lines for a multiple stitch ranging from 2 to 99 in M5.</td>
</tr>
<tr>
<td>M5</td>
<td>Input the number of lines for a multiple stitch ranging from 2 to 99 in M5.</td>
</tr>
<tr>
<td>M5</td>
<td>Input the stitch length in M5.</td>
</tr>
<tr>
<td>L7 8 9</td>
<td>Press L7 8 9 to input a split.</td>
</tr>
</tbody>
</table>

1. Determine the embroidering start point with △▴<▶ and press L.

2. Press M5 0 0.

3. Move the needle point to the second point or after with △▴<▶ and press L.

4. When the needle point is moved to the corner, press L7 8 9.

5. Repeat steps 3 and 4 until the end point of the inside (or the outside) line is input. Press L. Move the needle point to the start point of the outside (or the inside) line with △▴<▶, and press L.

6. Program all necessary points in the same manner.

7. Input the desired number of lines as M5.

8. Input the desired stitch length as M.

9. Press L.
Modifying the program of a multiple stitch

When modifying the stitch length or the number of lines for a multiple stitch, the previously created curve program can be used.

The previously created programs are required for modifying programs of multiple stitch. Programs of multiple stitch written to floppy disks cannot be modified.

Commands to be used

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>M5</td>
<td>Input the number of lines for a multiple stitch ranging from 2 to 99 in □□.</td>
</tr>
<tr>
<td></td>
<td>Ex.) The number of lines for a multiple stitch Input value 5 lines 505</td>
</tr>
</tbody>
</table>

1. Press 🎆 .
   The work clamp moves to the home position.

2. Press 🎆 🎆 🎆 🎆 .
   The needle point moves. When the needle point is at the start point for a multiple stitch, stop it by pressing 🎆 .

3. Input the desired number of lines as 🎆 🎆 🎆 .

4. Input the desired stitch length as 🎆 🎆 .

5. Press 🎆 .
   Calculation is performed based on the input data. When a buzzer stops, the needle point moves to the end point for a multiple stitch.
Creating double stitch

Command to be used

Creating double stitch in the reverse direction to the sewing path. Input the width of double stitch in .
Values 1.0 - 9.9 mm are available for the width.

<table>
<thead>
<tr>
<th>Example</th>
<th>Width</th>
<th>Input</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.5 mm</td>
<td>215</td>
<td></td>
</tr>
</tbody>
</table>

Input the stitch length in .

Carrying out double stitch on the left side to the sewing path.

Carrying out double stitch on the right side to the sewing path.

Starting double stitch calculations.
(This is the end code. Refer to page 179 for details.)

If sharp angles or fine curves are included in the pattern sheet, the desired double stitch may not be achieved.

1. Select the sewing start position with and press .

2. Determine the width and input .

3. Move the needle with to select the second point, then press .

4. Move the needle to the corner point and input .
5. Repeat steps 3 and 4 and move the needle to the end point. Input \textbf{M3}.

When the alarm sound is complete, the needle point moves to the end position.

<table>
<thead>
<tr>
<th>X</th>
<th>2.90mm</th>
<th>V</th>
<th>2.90mm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Y</td>
<td>1.70mm</td>
<td>V</td>
<td>1.20mm</td>
</tr>
<tr>
<td>STEF 11</td>
<td>PITCH</td>
<td>2.0mm</td>
<td>S</td>
</tr>
</tbody>
</table>

Parallel stitch

Command to be used

\begin{itemize}
  \item \textbf{M3} Creating parallel stitch in the same direction to the sewing path. Input the width of parallel stitch in \textbf{M3}.
  \item Values 1.0 - 9.9 mm are available for the width.
  \begin{tabular}{c|c|c}
    Example & Width & Input \\
    \hline
    & 1.5mm & 315 \\
  \end{tabular}
  \item \textbf{L} Input the stitch length in \textbf{L}.
  \item \textbf{L} Carrying out parallel stitch on the left side to the sewing path.
  \item \textbf{L} Carrying out parallel stitch on the right side to the sewing path.
  \item \textbf{L} Starting parallel stitch calculations. (This is the end code. Refer to page 179 for details.)
\end{itemize}

1. Select the sewing start position with \textbf{△\triangleleft△} and press \textbf{L}.

<table>
<thead>
<tr>
<th>X</th>
<th>1.60mm</th>
<th>V</th>
<th>1.20mm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Y</td>
<td>1.60mm</td>
<td>V</td>
<td>1.20mm</td>
</tr>
<tr>
<td>STEF 000</td>
<td>PITCH</td>
<td>2.0mm</td>
<td>S</td>
</tr>
</tbody>
</table>

2. Determine the width and input \textbf{M3}.

<table>
<thead>
<tr>
<th>X</th>
<th>1.60mm</th>
<th>V</th>
<th>1.20mm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Y</td>
<td>0.00mm</td>
<td>V</td>
<td>0.00mm</td>
</tr>
<tr>
<td>STEF 303</td>
<td>PITCH</td>
<td>2.0mm</td>
<td>S</td>
</tr>
</tbody>
</table>

3. Move the needle with \textbf{△\triangleleft△} to select the second point, then press \textbf{L}.

<table>
<thead>
<tr>
<th>X</th>
<th>8.00mm</th>
<th>V</th>
<th>1.20mm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Y</td>
<td>6.40mm</td>
<td>V</td>
<td>0.00mm</td>
</tr>
<tr>
<td>STEF 303</td>
<td>PITCH</td>
<td>2.0mm</td>
<td>S</td>
</tr>
</tbody>
</table>
4. Move the needle to the corner point and input M4.

```
<table>
<thead>
<tr>
<th>Width Width</th>
<th>Input</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.0 mm - 9.9 mm</td>
<td>415</td>
</tr>
</tbody>
</table>
```

5. Repeat steps 3 and 4 and move the needle to the end point. Input M4.
When the alarm sound is complete, the needle point moves to the end position.

```
<table>
<thead>
<tr>
<th>Width Width</th>
<th>Input</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.0 mm - 9.9 mm</td>
<td>415</td>
</tr>
</tbody>
</table>
```

### Offset

**Command to be used**

- **M**
  - Creating offset. Input the width of offset in M4.
  - Values 1.0 - 9.9 mm are available for the width
  - Example Width Input
    - 1.5 mm 415

- **L**
  - Input the stitch length in L.
  - Carrying out offset on the left side to the sewing path.

- **L**
  - Carrying out offset on the right side to the sewing path.

- **E**
  - Starting offset calculations.
  - (This is the end code. Refer to page 179 for details.)

1. Select the sewing start position with △▼▲▼ and press L.

```
<table>
<thead>
<tr>
<th>Width Width</th>
<th>Input</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.70mm - 1.20mm</td>
<td>400</td>
</tr>
</tbody>
</table>
```

2. Determine the width and input M4.

```
<table>
<thead>
<tr>
<th>Width Width</th>
<th>Input</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.00mm - 0.99mm</td>
<td>403</td>
</tr>
</tbody>
</table>
```
3. Move the needle with △□△ to select the second point, then press 🔩.

4. Move the needle to the corner point and input 788L.

5. Repeat steps 3 and 4 and move the needle to the end point. Input 111L.

When the alarm sound is complete, the needle point moves to the end position.

Creating feed data

Command to be used

- **7 6 6 L**: Specifying split (the separation point for different patterns in sewing) after feed
- **7 7 7 L**: Moving in parallel for the feed
- **7 8 8 L**: Creating split data after basting
- **7 9 9 9 L**: Creating basting data

1. Press 7.

2. Determine the feed point with △□△.
3. **Input command depending on the feed.**

Press L if not specified.

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>L2 2 0</td>
<td>Stopping the needle at the upper end for the split.</td>
</tr>
<tr>
<td>L2 2 1</td>
<td>Stopping the needle at the lower end for the split.</td>
</tr>
</tbody>
</table>

### Creating split data

**Command to be used**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>L2 2 0</td>
<td>Stopping the needle at the upper end for the split.</td>
</tr>
<tr>
<td>L2 2 1</td>
<td>Stopping the needle at the lower end for the split.</td>
</tr>
</tbody>
</table>

1. **Input command depending on the split.**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>M9 0 2</td>
<td>Input for magnification (x2)</td>
</tr>
<tr>
<td>M9 0 5</td>
<td>Input for magnification (x5)</td>
</tr>
<tr>
<td>M9 1 0</td>
<td>Input for magnification (x10)</td>
</tr>
</tbody>
</table>

The following three scales are available for magnification: x2, x5, and x10.

Use a pattern sheet suitable for the magnified pattern.

The magnified data is reduced when the end code is input.

1. **Make sure that the needle is at the home position.**

Press R if not specified.

2. **Select magnification and press M9**.
3. Create a pattern data.
   Move the needle with \(\uparrow\downarrow\leftarrow\rightarrow\), then press \(L\) for setting.

4. Input the end code.

   |   |   |   |
---|---|---|---|
3 |  5.80mm | V | 5.90mm |
3 |  0.90mm | V | 1.70mm |
|   | STEF111 | PITCH | 2.0mm |
|   | 4/4   |

---

**Low-speed sewing**

Carry out setting for low-speed sewing.

**Command to be used**

- \(L666\) The maximum sewing speed becomes 400 spm or lower.
- \(L667\) The maximum sewing speed becomes 1200 spm or lower.
- \(L668\) The maximum sewing speed becomes 800 spm or lower.
- \(L669\) The maximum sewing speed becomes 600 spm or lower.
- \(L660\) Canceling setting for low speed data

1. Move to the desired needle position for setting.

2. Select the type of low speed sewing and input the command.

   |   |   |   |
---|---|---|---|
3 |  2.80mm | V | 2.10mm |
3 |  1.80mm | V | 0.00mm |
|   | STE666 | PITCH | 2.0mm |
|   | 3/4   |

If multiple settings are required, input the stitch counts in 3 digits continuously and press \(+\).
Setting the option output

This is set to flip/flop the option output.

Command to be used

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>7 7 1 L</td>
<td>Flipping/flopping option output 1</td>
</tr>
<tr>
<td>7 7 2 L</td>
<td>Flipping/flopping option output 2</td>
</tr>
<tr>
<td>7 7 3 L</td>
<td>Flipping/flopping option output 3</td>
</tr>
<tr>
<td>7 7 0 L</td>
<td>Canceling option output setting</td>
</tr>
</tbody>
</table>

1. Move the needle to the desired position.

2. Input the command for option output.

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>6/1</td>
<td>2.40mm K 4.90mm H</td>
</tr>
<tr>
<td>6/1</td>
<td>0.20mm K 1.70mm H</td>
</tr>
<tr>
<td>6/1</td>
<td>2.00mm K 9.00mm H</td>
</tr>
</tbody>
</table>

Ending programming

When programming is completed, input an end code.

Command to be used

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 1 1 E</td>
<td>Normal end</td>
</tr>
<tr>
<td>1 1 2 E</td>
<td>Fixing the sewing speed at 1000 spm or lower.</td>
</tr>
<tr>
<td>1 1 3 E</td>
<td>Not carrying out thread removal.</td>
</tr>
<tr>
<td>1 1 4 E</td>
<td>Setting the sewing speed at 1000 spm or lower without thread removal.</td>
</tr>
<tr>
<td>1 1 5 E</td>
<td>Carrying out no thread breakage.</td>
</tr>
<tr>
<td>1 1 6 E</td>
<td>Fixing the sewing speed at 1500 spm or lower.</td>
</tr>
</tbody>
</table>

1. When the data is created, input the end code.

Data after the end code is input is deleted.
Chapter 3 Programming with Command Function

Editing data

Moving symmetrically to the Y axis

Command to be used

```
0 0 1 M
```

Moving symmetrically to the Y axis passing the start point of sewing

This function is available only when the needle is at the home position.

1. **Make sure that the needle is at the home position.**
   Press \( \text{R} \) if the needle is not at the home position.

2. **Input** \( 0 0 1 M \).

3. **Press** \( \text{L} \).

Moving symmetrically to the X axis

Command to be used

```
0 1 0 M
```

Moving symmetrically to the X axis passing the start point of sewing

This function is available only when the needle is at the home position.

1. **Make sure that the needle is at the home position.**
   Press \( \text{R} \) if the needle is not at the home position.

2. **Input** \( 0 1 0 M \).
3. Press \( L \).

Moving symmetrically to a point

**Command to be used**

\[
\text{M0 1 1}
\]

Moving symmetrically to the sewing start position

This function is available only when the needle is at the home position.

1. **Make sure that the needle is at the home position.**

   Press \( R \) if the needle is not at the home position.

2. **Input** \( \text{M0 1 1} \).

3. Press \( L \).
Rotating a pattern clockwise (counterclockwise)

Command to be used

- `666`  
  Rotating clockwise

- `667`  
  Rotating counterclockwise

This function is available only when the needle is at the home position. Values of 1 - 359 degrees are available for input.

1. **Make sure that the needle is at the home position.**
   
   Press `R` if the needle is not at the home position.

2. **Determine the center point for rotation with △▼◄►.**

3. **Input `666` or `667` .**

4. **Input the angle in 3 digits and press L.**
Copying a pattern rotated clockwise (counterclockwise)

Command to be used

Copying a pattern rotated clockwise

Copying a pattern rotated counterclockwise

This function is available only when the needle is at the home position.
Values of 1 - 359 degrees are available for input.
The copied data is linked to the original data with a split data.

1. **Make sure that the needle is at the home position.**
   Press R if the needle is not at the home position.

2. **Determine the center point for rotation with △▼<<.**

3. **Input ▶ 6 ▶ 6 ▶ or ▶ 6 ▶ 7 ▶ .**

4. **Input the angle in 3 digits and press L.**
Resizing

Command to be used

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>[ ] [ ] [ ] [ ]</td>
<td>Resizing a pattern in the X and Y directions</td>
</tr>
<tr>
<td>[ ] [ ] [ ] [ ]</td>
<td>Used to input magnification in the X direction.</td>
</tr>
<tr>
<td>[ ] [ ] [ ] [ ]</td>
<td>Used to input magnification in the Y direction.</td>
</tr>
</tbody>
</table>

This function is available only when the needle is at the home position.

1. **Make sure that the needle is at the home position.**
   Press [ ] if the needle is not at the home position.

2. **Determine the reference point for resizing with △▽↑↓.**

3. **Input [ ] [ ] [ ] [ ] .**

4. **Input the magnification in 3 digits in the X direction and press [ ] .**
   Magnification values of 0 - 400 are available for input.

5. **Input the magnification in 3 digits in the Y direction and press [ ] .**
   Magnification values of 0 - 400 are available for input.
6. **Input the stitch length in 3 digits and press L.**

If the value is "000", the stitch count remains unchanged. The stitch length increases or decreases.

![Stitch Length Example]

**Copying a pattern resized**

**Command to be used**

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th>M</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td>Copying a pattern resized in the X and Y directions</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>F</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Used to input magnification in the X direction.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>M</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Used to input magnification in the Y direction.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

This function is available only when the needle is at the home position. The copied data is linked to the original data with a split data.

1. **Make sure that the needle is at the home position.**

Press R if the needle is not at the home position.

2. **Determine the reference point for resizing with △▽左右.**

![Reference Point Example]

3. **Input M9 9 9.**

![Magnification Input Example]

4. **Input the magnification in 3 digits in the X direction and press F.**

Magnification values of 0 - 400 are available for input.

![Magnification Input Example]
5. **Input the magnification in 3 digits in the Y direction and press M.**
   Magnification values of 0 - 400 are available for input.

   ![Magnification settings]

6. **Input the stitch length in 3 digits and press L.**
   If the value is "000", the stitch count remains unchanged. The stitch length increases or decreases.

   ![Stitch length settings]

---

**Repeated copying**

**Command to be used**

```
3 3 3 L
```

Copying data from the sewing start position or the feed point (excluding the number of feed boundaries to be ignored) to the current needle position for the area after the current needle position

1. **Move the needle to the desired position.**

2. **Input 3 3 3 L.**
   The needle follows the copied data. Press to cancel halfway.

   ![Repeated copying settings]
Copying symmetrically to a point

Command to be used

\[ \text{L4 4 0} \]

Copying data symmetrically to the current needle position from the start point or the feed point (excluding the number of feed boundaries to be ignored) to the current needle position.

1. Move the needle to the desired position.

2. Input \( \text{L4 4 0} \).

Copying to the X axis

Command to be used

\[ \text{L4 4 1} \]

Copying data to the X axis passing the current needle position from the start point or the feed point (excluding the number of feed boundaries to be ignored) to the current needle position.

1. Move the needle to the desired position.

2. Input \( \text{L4 4 1} \).
Copying to the Y axis

Command to be used

\[4 \times 4 \times 2\]

Copying data to the Y axis passing the current needle position from the start point or the feed point (excluding the number of feed boundaries to be ignored) to the current needle position

1. Move the needle to the desired position.

2. Input \[4 \times 4 \times 2\].

<table>
<thead>
<tr>
<th>(x)</th>
<th>(-2.10\text{mm})</th>
<th>(y)</th>
<th>(-0.10\text{mm})</th>
<th>(V)</th>
<th>(3.80\text{mm})</th>
</tr>
</thead>
<tbody>
<tr>
<td>STEP</td>
<td>442</td>
<td>PITCH</td>
<td>0.5mm</td>

</table>
Moving in parallel

Command to be used

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>L777</td>
<td>Changing the movement data for the current needle position.</td>
</tr>
<tr>
<td>LI777L</td>
<td>Moving data in parallel after the current needle position (using needle drop data to the moved position)</td>
</tr>
</tbody>
</table>

1. Move the needle to the desired position.

2. Input 777L or LI777L.

3. Determine the destination point with △▽<→ and press L.
Displaying image

A data image is displayed during programming or editing.

1. **Press 📐.**
   Pattern image is displayed. Press 🔄 or ⏹️ to return to the main menu.

   Stitch count

   Press 🗑️ to display the overall sewing area.

   The data width is displayed in mm.

   The data height is displayed in mm.

   Press 🡻 to display the overall view of the data.
Deleting data

Deletes the data during creating and displaying.

Deleting a part of data

Command to be used

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>$C\quad$</td>
<td>Deletes data after ( \underline{\qquad} ) stitches. If this command is used at the sewing start position, the sewing start position is deleted and the current needle position becomes the sewing start position.</td>
</tr>
<tr>
<td>$C\quad$</td>
<td>Deletes data before ( \underline{\qquad} ) stitches. If this command is used at the sewing end position, the end code is deleted.</td>
</tr>
</tbody>
</table>

1. Move the needle to the desired position.

2. Input the command.

   ![Stitch Count](image)

   - Input $C\quad$ to delete data after the current needle position.
   - Input $C\quad$ to delete data before the current needle position.
   - Input the stitch count in $\square$.

Deleting program data

1. Press $2\quad2\quad2\quad$. 

   ![Program Data](image)

   An alarm sound is issued and input data is deleted.
Function of extended option output

Required controls for pressing motion and automatic stacking of sewing can be implemented according to various functions of the machine.

When 3 conditions, i.e. output conditions, enabling conditions and disabling conditions are achieved, the extended option output functions. The relationship between the output and the conditions is as follows:

Three items each for output conditions, enabling conditions and disabling conditions can be set.

Operating the extended option output

The following describes steps to display the menu for the extended option output.

1. Select and press .

2. Select and press .
## Items which can be set in the extended option output

The following items can be set in the submenu of the extended option output.

<p>| | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Sets the details of the extended option output. (Refer to page 196.)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Sets the details of enabling conditions. (Refer to page 197.)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Reads the extended option output data of the floppy disk. (Refer to page 198.)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Writes the extended option output data of the floppy disk. (Refer to page 199.)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Deletes the extended option output data during editing or data of the floppy disk. (Refer to page 200.)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
## Setting the extended option output

Items to be set are as follows:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Extended option output number</td>
<td>Specify a number out of 1 - 16. Refer to “Table of extended option output” (Refer to page 205.)</td>
</tr>
<tr>
<td>Operation setting</td>
<td>Select one out of ON, OFF, FLIP and FLOP with +/-.</td>
</tr>
<tr>
<td>Output condition</td>
<td>Input conditions for the extended option output. 3 conditions can be specified. Refer to “Table of extended option output” (Refer to page 205.)</td>
</tr>
<tr>
<td>Timer 1</td>
<td>Set the time until the output varies after the output condition is established. Input the value in unit of 10 ms. Value of 0 or 10 - 2550 ms is set.</td>
</tr>
<tr>
<td>Timer 2</td>
<td>Set the time for implementation of the extended option output. Input the value in unit of 10 ms. Value of 0 or 10 - 2550 ms is set. When the value is 0, the output remains varying.</td>
</tr>
</tbody>
</table>

When setting is complete, be sure to press  #.

To cancel the set value, input 0 0 0 and press  P.

To register the setting into the machine, carry out operation of "Writing the extended option output data" (page 199).
Setting enabling conditions

If setting is not made, the status is always enable. To carry out setting as per the extended option output conditions, do not set enabling conditions.

Items to be set are as follows:

<table>
<thead>
<tr>
<th>Extended option output number</th>
<th>Specify a number out of 1 - 16. Refer to &quot;Table of extended option output&quot; (Refer to page 205.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enabling conditions</td>
<td>3 numbers of enabling conditions can be input. Refer to &quot;Table of condition number&quot; (Refer to page 201.)</td>
</tr>
<tr>
<td>Disabling conditions</td>
<td>3 numbers of disabling conditions can be input. Refer to &quot;Table of condition number&quot; (Refer to page 201.)</td>
</tr>
</tbody>
</table>

When setting is complete, be sure to press 🔄.

To cancel the set value, input 0 0 0 and press 🔄.
Reading the extended option output data

Reads the extended option output data from a floppy disk.

1. Select  and press  .

2. Make sure that the floppy disk is set and press  .
   Data is read and the submenu appears.

3. Select  and press  .

4. Input the number of extended option output.
   Read data is displayed.

To register the data into the machine, carry out the operation in the next page.
Writing the extended option output data

Writes the extended option output data memorized in the programmer into a floppy disk. The data is also registered into the machine.

Be sure to use a formatted 2HD floppy disk.
"Formatting a floppy disk" (Refer to page 218.)
One floppy disk can record the data of extended option output No. 1 - 16.

1. Select and press .

2. Make sure that the floppy disk is set and press .

Data is written and the submenu appears.
Deleting the extended option output data

Deletes the extended option output data.

1. Select \( \text{select} \) and press \( \text{press} \).

   ![Select and Press]

2. Press \( \text{press} \).

   ![Press]

   The submenu appears.
Table of condition number

Select and input the number for output conditions, enabling conditions and disabling conditions from the following:

### Machine operation mode

<table>
<thead>
<tr>
<th>Condition No.</th>
<th>Operation meeting the condition</th>
</tr>
</thead>
<tbody>
<tr>

*1 Input available for optional parts. It is not used as extended option input if conditions are met.

*2 Connector number and pin number on the main circuit board in the control box

- The common terminal of connector P4 (AIR) is pin No. 11 at +24V.
- The common terminal of connector P21 (EXOUT) is pin No. 9 or 10 at +24V.
Chapter 4 Extended Option Output

Example of extended option output

To program the extended option output, prepare the timing chart. Then set the output condition, enable/disable conditions based on the chart.

The example shows how program setting values are determined from the timing chart. No explanation is given for the operation of the machine.

Example 1 of extended option output

Sequence 1 for stacker

This is a sequence example for removing and stacking the material as soon as the work clamp is lifted after sewing.

<table>
<thead>
<tr>
<th>Option output 4</th>
<th>BAR1 for holding material</th>
</tr>
</thead>
<tbody>
<tr>
<td>Option output 5</td>
<td>BAR2 for moving material</td>
</tr>
<tr>
<td>Option output 6</td>
<td>AIR for air blow</td>
</tr>
</tbody>
</table>

Timing chart

<table>
<thead>
<tr>
<th>④</th>
<th>⑤</th>
<th>⑥</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>1.2sec.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>0.5sec.</td>
<td>0.7sec.</td>
</tr>
<tr>
<td></td>
<td>0.5sec.</td>
<td>1.7sec.</td>
</tr>
</tbody>
</table>

Lifting of work clamp when embroidering is completed

Program setting value

Chapter 5
Reading / Writing Data
Reading data

Reads data from a floppy disk.

When there is no data for creation, data can be read by pressing the R/W button on the operation panel.
This operation cannot be available in command mode.
Data created in BAS-300 and BAS-300A series can also be read.

1. Select \( \text{Read} \) and press \( \text{Read} \).

2. Make sure that \( \text{Read} \) is selected, and press \( \text{Read} \).

3. Input the number of program with a numeric key.
   If there is data, \( \text{Read} \) appears.
   If there is no data, \( \text{No Data} \) appears. If \( \text{BAS-300 or BAS-300A Series} \) appears, the data is from BAS-300 or BAS-300A series.
Checking the image display (go to 7 when not checking)

4. Press \( \triangledown \) and select \( \text{ON} \).

   \[ \text{ON} \]
   \[ \text{OFF} \]

   OFF is highlighted if selected.

5. Press \( \triangleright \) to turn on.

   Press \( \triangleright \) to turn off again.

   \[ \text{ON} \]
   \[ \text{OFF} \]

6. Press \( \text{J} \).

   An image is displayed. Press \( \text{ESC} \) or \( \text{C} \) to return to the submenu.

   Displays the stitch count.

   Press \( \triangleright \) to display the overall sewing data.

   Displays the lateral length.

   Displays the longitudinal length.

   Press \( \triangleright \) to display the overall view of the data.

7. Press \( \text{J} \) to read the data.

   To cancel reading, press \( \text{ESC} \).
Reading additional data

This is used to read other data continuously after reading a data.

Additionally read data is added to the editing data as a split data.
This operation cannot be available in command mode.
Data created in BAS-300 and BAS-300A series can also be read.

1. Select \[ \text{ } \] and press \[ \text{ } \].

2. Select \[ \text{ } \] and press \[ \text{ } \].

3. Input the number of program with a numeric key.
   If there is data, \[ \text{ } \] appears.
   If there is no data, \[ \text{ } \] appears, the data is from BAS-300 or BAS-300A series.

Checking the image display (go to 7 when not checking)

4. Press \[ \text{ } \] and select \[ \text{ } \].

5. Press \[ \text{ } \] to turn on.
   Press \[ \text{ } \] to turn off again.
6. **Press **[image]

An image is displayed. Press [ESC] or [C] to return to the submenu.

Displays the stitch count.

Press [ ] to display the overall sewing data.

Displays the lateral length.

Displays the longitudinal length

Press [ ] to display the overall view of the data.

7. **Press **[image]

To cancel reading, press [ESC].
Writing data to a floppy disk

Writes data from the programmer to a floppy disk.

If there is data for creation, data can be written by pressing the Read/Write button on the operation panel.

Be sure to use a formatted 2HD floppy disk. The floppy disk accompanying this product is already formatted.

This operation cannot be available in command mode.

1. Select and press .

2. Select and press .

3. Input the number of program with a numeric key.
   If there is data, appears.
   If there is no data, appears. If appears, the data is from BAS-300 or BAS-300A series.
Checking the image display (go to 7 when not checking)

4. Press \( \text{▼} \) and select \( \text{図} \).

5. Press \( \text{►} \) to turn on.

6. Press \( \text{◄} \).

7. Press \( \text{◄} \) to write the data.

To cancel writing, press \( \text{ESC} \).
Deleting data in a floppy disk

Deletes data saved in a floppy disk.

This operation cannot be available in command mode.

1. **Select** and press .

2. **Select** and press .

3. **Input the number of program to be deleted with a numeric key.**
   - If there is data, appears.
   - If there is no data, appears. If appears, the data is from BAS-300 or BAS-300A series.

Checking the image display (go to 7 when not checking)

4. **Press** and select .

5. **Press** to turn on.
   - Press to turn off again.
6. **Press J.**
   An image is displayed. This is the image from data saved in a floppy disk, not the image currently in editing. Press ESC or C to return to the submenu.

   Displays the stitch count.
   Displays the lateral length.
   Displays the longitudinal length.

   Press ▼ to display the overall view of data.

7. **Press J to delete the data.**
   To cancel deletion, press ESC.
Formatting a floppy disk

Formats a floppy disk for the programmer.

This operation cannot be available in command mode.

1. Select 🔄 and press 🅵.
2. Select 🔄 and press 🅵.

OK to format floppy disk?

دير: YES  سير: NO
Reading other types of data

Reads data created in other machines.

The following 3 data can be read.

DST  
DSB  
DSZ

This operation cannot be available in command mode.

1. Select and press.

2. Make sure that is selected, and press.

3. Select the data type for reading by pressing and press to put a check mark.

4. Press.

The data name (in 8 alphanumeric characters) saved in a floppy disk is displayed.
Checking the image display (go to 7 when not checking)

5. Press △▽←→ to select ON.

6. Press ▶ to turn on.
   Press ◄ to turn off again.

7. Press △▽←→ to select the data to display.

8. Press .
   If the image is displayed, press ◆ again to read data. To cancel reading, press ESC or C.

Screen example when an image is displayed
Chapter 6

Preference
Setting preference

Sets the operational preference of the programmer.

Items to be set are as follows:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Smoothing equal division</td>
<td>When a smoothing function is used, data is created for equal division</td>
</tr>
<tr>
<td></td>
<td>within the specified pitch.</td>
</tr>
<tr>
<td>Area check</td>
<td>When data is created or edited, data outside the sewing area is not</td>
</tr>
<tr>
<td></td>
<td>created.</td>
</tr>
<tr>
<td>Language</td>
<td>Display language such as error message is switched.</td>
</tr>
</tbody>
</table>

1. **Select** and press .

2. **Select** the item with .

   - Smoothing equal pitch
   - Area check
   - Language

Selecting smoothing equal division or area check

3. **For setting**, press to put a check mark.  
   To cancel setting, press to cancel the check mark.

Switching language

4. **Press** or .  
   The language switches when pressed.
5. After setting is complete, press ↵.
