Creating Version Upgrade Disk

This document explains how to create the upgrade version disks using the upgrade file or files which are downloaded from the website or sent by e-mail.

Downloading the file from website or email

1. Create a temporary directory on your computer (i.e., C:\TEMP) to save a self-extracting file or individual files on the hard disk.
2. Start downloading the file and or files.
3. Designate the directory created in step 1 above to save the downloaded file and or files.
4. If you downloaded individual files you may skip this step. Double-click the self-extracting file (*.exe) that you downloaded to extract it.

Creating the installation disk

When the file is extracted according to "Downloading the file" above, the following three files are created.

# Of Files	Disk Label	File name (BES-1216AC) (BES-1201AC)	File name (BES-916AC) (BES-901AC)	File name (BES-116AC) (BES-101AC)
1	SETUP DISK	1201BS -***.bup	901BS -***.bup	101BS -***.bup
2	INSTALL DISK1	1201BM -***.bup	901BM -***.bup	101BM -***.bup
3	INSTALL DISK2	1201BP -***.bup	901BP -***.bup	101BP -***.bup

(***varies according to the version of the software downloaded.)

1. Prepare three empty 1.4MB floppy disks.
2. Copy each file to a separate floppy disk.
3. Label each disk accordingly.
