May Flaum

One of my favorite things about the ScanNCut machine is that the intricate fabric patterns so easily translate into my papercrafting. Creating a square card is the perfect way to highlight one of those designs and create a special card to let a special person really know how much they mean to me.

MATERIALS:

Brother™ ScanNCut machine, cardstock, patterned paper, stamps, black ink, glitter glue, paint, adhesive sheet

step 1.

Print the pieces of the flower design (except the tiny center, smaller inner leaves, and light strip on the buds) selected from the variety of built-in quilt and appliqué patterns.

step 2. Once these pieces are cut, assemble onto a sheet of cardstock.

Tip: It can be easier to use an adhesive sheet on cardstock instead of trying to individually add adhesive to each piece, but either way works.

step 3.

Cut out the flower design and add a button center.

step 4.

Using the ScanNCut machine, cut a 4.30" scalloped circle.

step 5.

Gather all of your pieces and prepare to assemble your card. You will need a 5" x 10" piece of cardstock (folded in 1/2" to create card base), a 4 1/2" square of patterned paper, and the pieces we cut from the ScanNCut machine.

step 6.

Attach the patterned paper to the base of your card by stitching with a zigzag stitch.

ScanNCut

step 7.

Attach the circle and floral elements, and edge the card with purple paint.

step 8.

Stamp "Thanks" using black ink at the bottom of the card.

step 9.

Finish the card by accenting the flower with purple glitter glue.
