Tip When making pieces using built-in patterns like the boat and airplane that are composed of separate parts, the Unify editing function is handy for joining them together.

1 Create the base.
Prepare a picture drawn by you on your child to use as the background board. Thicker kinds of paper can make magnets hard to attach, so use copy paper or other similar thin paper.

2 Place a metal panel under the background picture, then insert the panel and picture in a frame.

3 Make the magnetic pieces.
Select the built-in pattern of the sun.

4 Cut the pieces.
Replace the blade on the machine with the deep cutting blade specifically designed for thick material, then attach the red cut sheet part of the piece (part A) to the magnetic sheet and cut it.

5 Attach the yellow cut sheet part of the piece (part B) and cut it.

6 Cut and fashion the other pieces in the same way.
