Embroidered Earrings

Creating beautiful embroidered pieces has never been easier than it is with the Entrepreneur® Pro PR1000e from Brother™! From t-shirts to handbags, jewelry and more, your creative possibilities are virtually limitless with this enhanced 10-needle home embroidery machine. Check out these great earrings I created with the assistance of the highly advanced PE-DESIGN® NEXT embroidery software.

MATERIALS: Brother™ Entrepreneur® Pro PR1000e, PE-DESIGN® NEXT software, fabric, thread, hot glue gun, earring backings.

Using your PE-DESIGN® NEXT software, select the shape button and build three triangles proportional in size so that they fit into each other nicely. After creating the shapes, lay them out accordingly in order to avoid fabric waste. Save and export your design to a zip drive. In my design, I have created one extra triangle as a backup.

Next, pick two colored threads of your choice and properly thread your machine. Then choose a fabric of your liking and tear away facing, stretch, and place into the size hoop your machine suggests and put into the designated spot. You may need to adjust the arms in order to fit a larger hoop.

Upload your design to your Brother™ Entrepreneur® Pro PR1000e.

Rotate your design 90 degrees. Now, copy or upload the same design and rotate the *opposite* 90 degrees. Finally, line up the two shapes to mirror each other to conserve space.

5

Hit the sewing button and then lock your design in place.

6

Press the arrow when it turns green to start embroidering your design.

7

Your machine will start to sew your design. The PR1000e will give you a time of completion, depending on the speed you have your stitch-per-minute set at.

When your design is complete, your machine will chime and let you know it is finished on your screen.

After taking your fabric out of the hoop, press it firmly. Then cut your triangles from the fabric. You may have extra, depending on your original design.

Now comes your personal preference. You can create any accessory from – a tiepin to a pendant for a necklace, or even a pair of earrings. I have decided to make a pair of earrings. Using pre-cut, wooden triangles from my local craft store, I decide how I would like my shapes laid to create the accessory.

Using a hot glue gun, I set my design into place.

Finally I glue earring backs onto the finished product, according to how I would like them to hang.

Style your favorite little black dress or add some spice and mix it with your everyday look! With the Brother™ Entrepreneur® Pro PR1000e, fashion has no boundaries!

(This project was created from the designer's perspective.)
