Please read this manual before using the machine.
Please keep this manual within easy reach for quick reference.

DIRECT DRIVE
PROGRAMMABLE ELECTRONIC PATTERN SEWER
Thank you very much for buying a BROTHER sewing machine. Before using your new machine, please read the safety instructions below and the explanations given in the instruction manual.

With industrial sewing machines, it is normal to carry out work while positioned directly in front of moving parts such as the needle and thread take-up lever, and consequently there is always a danger of injury that can be caused by these parts. Follow the instructions from training personnel and instructors regarding safe and correct operation before operating the machine so that you will know how to use it correctly.
SAFETY INSTRUCTIONS

[1] Safety indications and their meanings
This instruction manual and the indications and symbols that are used on the machine itself are provided in order to ensure safe operation of this machine and to prevent accidents and injury to yourself or other people.
The meanings of these indications and symbols are given below.

Indications

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>⚠️ DANGER</td>
<td>The instructions which follow this term indicate situations where failure to follow the instructions will result in death or serious injury.</td>
</tr>
<tr>
<td>⚠️ CAUTION</td>
<td>The instructions which follow this term indicate situations where failure to follow the instructions may result in minor or moderate injury.</td>
</tr>
<tr>
<td>🚨 IMPORTANT</td>
<td>The instructions which follow this term indicate situations where failure to follow the instructions may result in physical damage to equipment and surroundings or result in problems with equipment operation.</td>
</tr>
</tbody>
</table>

Symbols

- This symbol (⚠️) indicates something that you should be careful of. The picture inside the triangle indicates the nature of the caution that must be taken.
  (For example, the symbol at left means “beware of injury”.)

- This symbol (🚫) indicates something that you must not do.

- This symbol (✅) indicates something that you must do. The picture inside the circle indicates the nature of the thing that must be done.
  (For example, the symbol at left means “you must make the ground connection”.)
[2] Notes on safety

⚠️ DANGER

Wait at least 5 minutes after turning off the power switch and disconnecting the power cord from the wall outlet before opening the cover of the control box. Touching areas where high voltages are present can result in severe injury.

⚠️ CAUTION

Environmental requirements

⚠️ Use the sewing machine in an area which is free from sources of strong electrical noise such as electrical line noise or static electric noise. Sources of strong electrical noise may cause problems with correct operation.

any fluctuations in the power supply voltage should be within ±10% of the rated voltage for the machine. Voltage fluctuations which are greater than this may cause problems with correct operation.

The power supply capacity should be greater than the requirements for the sewing machine’s power consumption.

Insufficient power supply capacity may cause problems with correct operation.

The pneumatic delivery capability should be greater than the requirements for the sewing machine’s total air consumption.

Insufficient pneumatic delivery capability may cause problems with correct operation.

The ambient temperature should be within the range of 5°C to 35°C during use.

Temperatures which are lower or higher than this may cause problems with correct operation.

The relative humidity should be within the range of 45% to 85% during use, and no dew formation should occur in any devices. Excessively dry or humid environments and dew formation may cause problems with correct operation.

In the event of an electrical storm, turn off the power and disconnect the power cord from the wall outlet. Lightning may cause problems with correct operation.

Installation

⚠️ Machine installation should only be carried out by a qualified technician.

Contact your Brother dealer or a qualified electrician for any electrical work that may need to be done.

The sewing machine weighs approximately 160 kg. Use equipment such as a crane or hoist when installing the machine head and adjusting the height of the table.

If you try to lift the machine head yourself, it may cause injuries such as back injury.

Do not connect the power cord until installation is complete. If the foot switch is depressed by mistake, the sewing machine might start operating and injury could result.

Hold the machine head with both hands when tilting it back or returning it to its original position.

In addition, do not subject the machine head to extra force while it is tilted back. If this is not observed, the machine head may become unbalanced and fall down, and serious injury or damage to the sewing machine may result.

Be sure to connect the ground. If the ground connection is not secure, you run a high risk of receiving a serious electric shock, and problems with correct operation may also occur.

⚠️ All cords should be secured at least 25 mm away from any moving parts. Furthermore, do not excessively bend the cords or secure them too firmly with staples, otherwise there is the danger that fire or electric shocks could occur.

Install the safety covers to the machine head and motor.

If using a work table which has casters, the casters should be secured in such a way so that they cannot move.

Use a table with a height of 84 cm or less. If the table is too high, the machine head may become unbalanced and fall down, and serious injury or damage to the sewing machine may result.

Be sure to wear protective goggles and gloves when handling the lubricating oil and grease, so that they do not get into your eyes or onto your skin. If the oil and grease get into your eyes or onto your skin, inflammation can result. Furthermore, do not drink or eat the lubricating oil or grease. They may cause diarrhea or vomiting. Keep the oil out of the reach of children.
## CAUTION

### Sewing

- **Operators**: This sewing machine should only be used by operators who have received the necessary training in safe use beforehand.
- **Applications**: The sewing machine should not be used for any applications other than sewing.
- **Protective Goggles**: Be sure to wear protective goggles when using the machine. If goggles are not worn, there is the danger that if a needle breaks, parts of the broken needle may enter your eyes and injury may result.

### Cleaning

- **Protective Equipment**: Be sure to wear protective goggles and gloves when handling the lubricating oil and grease, so that they do not get into your eyes or onto your skin. If the oil and grease get into your eyes or onto your skin, inflammation can result. Furthermore, do not drink or eat the lubricating oil or grease. They may cause diarrhea or vomiting. Keep the oil out of the reach of children.

### Maintenance and inspection

- **Qualified Technician**: Maintenance and inspection of the sewing machine should only be carried out by a qualified technician. Ask your Brother dealer or a qualified electrician to carry out any maintenance and inspection of the electrical system.
- **Power Switch**: Turn off the power switch and disconnect the power cord before carrying out the following operations. If the foot switch is depressed by mistake, the sewing machine might start operating and injury could result.
  - Inspection, adjustment and maintenance
  - Replacing consumable parts such as the rotary hook
- **Pressure Gauge**: Disconnect the air hoses from the air supply and wait for the needle on the pressure gauge to drop to “0” before carrying out inspection, adjustment and repair of any parts which use the pneumatic equipment.
- **Machine Head**: Hold the machine head with both hands when tilting it back or returning it to its original position. In addition, do not subject the machine head to extra force while it is tilted back. If this is not observed, the machine head may become unbalanced and fall down, and serious injury or damage to the sewing machine may result.

### IMPORTANT

- **Liquids**: Do not allow any liquids to get onto this sewing machine, otherwise smoke or fire may occur. If any liquid gets inside the sewing machine (machine head or control box), immediately turn off the power and disconnect the power plug from the electrical outlet, and then contact the place of purchase or a qualified technician.
Warning labels

The following warning labels appear on the sewing machine. Please follow the instructions on the labels at all times when using the machine. If the labels have been removed or are difficult to read, please contact your nearest Brother dealer.

1. Hazardous voltage will cause injury. Turn off main switch and wait 5 minutes before opening this cover.

2a. Moving parts may cause injury. Operate with safety devices. Turn off main switch before threading, changing bobbin and needle, cleaning etc.

2b. Moving parts may cause injury. Operate with safety devices* installed. Turn off the power before carrying out operations such as threading, changing the needle, bobbin, knives or hook, cleaning and adjusting.

3. Be careful to avoid getting hands caught in sliding parts.

4. Be sure to connect the ground. If the ground connection is not secure, you run a high risk of receiving a serious electric shock, and problems with correct operation may also occur.

5. Direction of operation

NOTE:
Either the 2a or the 2b label is displayed on the sewing machine.

*Safety devices
Devices such as eye guard, finger guard, thread take-up cover, motor cover, X motor cover, tension release solenoid cover, inside cover, outside cover, middle cover, fixed cover and rear cover

</table>

(*1) The number of data items and stitches that can be stored will vary depending on the number of stitches in each program.

(*2) Supply of parts relating to 3.5-inch floppy disks has already been discontinued. (However the mechanism will still function.)
3. TABLE PROCESSING DIAGRAM

- The thickness of the table should be at least 50 mm, and it should be strong enough to bear the weight and vibration of the sewing machine.
- If using casters, use ones which can bear the total weight of sewing machine and table.
- Check that the control box is at least 10 mm away from the leg. If the control box and the leg are too close together, it may result in incorrect sewing machine operation.
4. INSTALLATION

**CAUTION**

- Machine installation should only be carried out by a qualified technician.
- Contact your Brother dealer or a qualified electrician for any electrical work that may need to be done.
- The sewing machine head weighs approximately 160 kg. Use equipment such as a crane or hoist when installing the machine head and adjusting the height of the table. If you try to lift the machine head yourself, it may cause injuries such as back injury.
- Do not connect the power cord until installation is complete. If the foot switch is depressed by mistake, the sewing machine might start operating and injury could result.
- If using a work table which has casters, the casters should be secured in such a way so that they cannot move.
- Use a table with a height of 84 cm or less. If the table is too high, the machine head may become unbalanced and fall down, and serious injury or damage to the sewing machine may result.
- Hold the machine head with both hands when tilting it back or returning it to its original position. In addition, do not subject the machine head to extra force while it is tilted back. If this is not observed, the machine head may become unbalanced and fall down, and serious injury or damage to the sewing machine may result.
- All cords should be secured at least 25 mm away from any moving parts. Furthermore, do not excessively bend the cords or secure them too firmly staples, otherwise there is the danger that fire or electric shocks could occur.
- Be sure to connect the ground. If the ground connection is not secure, you run a high risk of receiving a serious electric shock, and problems with correct operation may also occur.
- Install the safety covers to the machine head and motor.

When placing the sewing machine on the table

Carry out the procedure starting from "4-2. Installing the control box" on the next page.

If the sewing machine was already installed to the table when it was delivered

Carry out the procedures indicated by [1] to [15] in the titles in the order of the numbers.

4-1. Removing the machine head fixing bolts [1]

If the sewing machine was already installed to the table when it was delivered, remove the two machine head fixing bolts (1) and the two plain washers (2).
4-2. Installing the control box [2]

**CAUTION**

The control box is heavy, so installation should be carried out by two or more people. In addition, take steps to make sure that the control box does not fall down. If this is not done, injury to feet or damage to the control box may result.

Before installing the control box (1), check that the model plate (a) on the control box (1) is “AX342G” to indicate that it is an RX-control box for BAS-342G sewing machines.

- If the sewing machine is installed to the table, tilt back the machine head. (Refer to "4-5. Tilting back and returning the machine head").

1. Control box
2. Bolts [4 pcs.]
3. Plain washers [4 pcs.]
4. Spring washers [4 pcs.]
5. Nuts [8 pcs.]

**NOTE:**
Check that the control box (1) is at least 10 mm away from the leg. If the control box (1) and the leg are too close together, it may result in incorrect sewing machine operation.

6. Power switch
7. Wood screws [2 pcs.]
8. Staples [7 pcs.]

**NOTE:**
Take care when tapping in the staples (8) to make sure that they do not pierce the power cord.
4-3. Installing the oil pan and support lever base

- Oil pan
- Wood screws [4 pcs.]
- Oiler
- Support lever base
- Plain washers [2 pcs.]
- Spring washers [2 pcs.]
- Bolts [2 pcs.]

4-4. Installing the machine head

1. Place the machine head onto the table.

**NOTE:**
- Use a crane or hoist to install the sewing machine.
- Be careful of the following when lowering the machine head onto the table.
  - Do not let any cords get clamped between the machine head and the table.
  - Do not place the machine head cushion (c) on top of the oil pan (a) or the support lever base (b).
  - Do not let the side (d) of the safety switch lever touch the support lever base (b).

- Rubber bushes (2 pcs.)
- Hinge holders (2 pcs.)
- Plain washers [4 pcs.]
- Spring washers [4 pcs.]
- Bolts [4 pcs.]

(Continued on next page)
2. After placing the machine head onto the table, remove the bolt (6) and the spacer (7).
   * The bolt (6) and the spacer (7) are necessary for securing the support lever (8) when the machine head is removed from the table, so keep them in a safe place.

3. Pass the support lever shaft (9) through the hole in the support lever base (10) and through the groove (f) in the support lever (8), and push it in until it is flush with the surface of the support lever base (10).
   * If it is difficult to pass the support lever shaft (9) through the groove (f) in the support lever (8), move the end of the support lever (8) up and down while passing the support lever shaft (9) through.

4. Tilting back and returning the machine head

**CAUTION**

- Hold the machine head with both hands when tilting it back or returning it to its original position. In addition, do not subject the machine head to extra force while it is tilted back. If this is not observed, the machine head may become unbalanced and fall down, and serious injury or damage to the sewing machine may result.

- Always be sure to engage the stopper of the support lever (1) when tilting back the machine head. If the stopper is not engaged, the machine head may return to its original position and your hands may get caught and injury may result.

- When disengaging the stopper, hold it by the knob (a). If you hold at the place indicated by (b), your hand will get caught between the support lever (1) and the table when the machine head is returned to its original position and injury will result.

The machine head can be tilted back and returned to one of three heights.
4. INSTALLATION

4-6. Installing the gas spring

1. Tilt back the machine head, and then secure the support lever (1) at stopper position (a).
   (Refer to "4-5. Tilting back and returning the machine head").
   **NOTE:** Use equipment such as a crane or hoist to tilt back the machine head.
2. Tighten the two set screws (2) to secure the support lever shaft (3).
3. Install the gas spring (8).
   - (4) Gas spring holders [L and R]
   - (5) Spacer
   - (6) Bolt
   - (7) Nut
   - (8) Gas spring
   - (9) Shaft collars [2 pcs.]
   - (10) Gas spring shaft D
   - (11) Plain washers [2 pcs.]
   - (12) Retaining rings E [2 pcs.]
   - (13) Bolts [4 pcs.]
   - (14) Plain washers [4 pcs.]
   - (15) Spring washers [4 pcs.]
   - (16) Nuts [4 pcs.]
   - (17) Gas spring shaft U
   - (18) Set screw
   * After installing the gas spring (8), gently return the machine head to its original position.
   (Refer to "4-5. Tilting back and returning the machine head").
4-7. Installing the operation panel [3]

(1) Cushion A
(2) Operation panel base
(3) Plain washers (medium) [3 pcs.]
(4) Bolts [3 pcs.]
(5) Cushions B [3 pcs.]
(6) Plain washers (large) [3 pcs.]
(7) Nuts [6 pcs.]
  * Tighten until the thickness of cushion B (5) is about 1 mm.
(8) Rubber seat
(9) Operation panel stand
(10) Operation panel
  * Pass the cords of the operation panel (10) through the operation panel stand (9) and under the table.
(11) Bolts [3 pcs.]
(12) Bolt

< If the sewing machine was already installed to the table when it was delivered >

(1) Operation panel
(2) Bolts [3 pcs.]
  * Pass the cords of the operation panel (1) through the operation panel stand (3) and under the table.
4. INSTALLATION

4-8. Installing the solenoid valve assembly

Install underneath the work table. (Refer to "3. Table processing diagram" for the installation positions.)

1. Solenoid valve assembly
2. Washers [2 pcs.]
3. Wood screws [2 pcs.]

NOTE:
Make sure that the solenoid valve assembly does not touch the control box or the leg of the table.

4-9. Connecting the air tubes [4]

1. Close the cock (1).
2. Turn the nut (3) at the end of the air hose (2) and connect it to the valve (4).
3. Open the cock at the compressor. * Check that no air is leaking from the connection of the valve (4) and air hose (2).
4. Open the cock (1). (The meter pointer will turn clockwise.)

NOTE:
Turn the cock (1) gently to open it.

5. Adjust the air pressure. (Refer to the next page.)

4-10. Installing the air hose [5]

1. Close the cock (1).
2. Turn the nut (3) at the end of the air hose (2) and connect it to the valve (4).
3. Open the cock at the compressor.
4. Open the cock (1). (The meter pointer will turn clockwise.)

NOTE:
Turn the cock (1) gently to open it.
4-11. Adjusting the air pressure [6]

Lift up the handle (2) of the regulator (1) and then turn it to adjust the air pressure to 0.5 MPa. After adjustment is complete, push the handle (2) downward to lock it.

4-12. Adjusting the speed controller [7]

You can adjust the lifting and lowering speeds for the work clamp using the knobs on the valves.
- When the upper knob is tightened, the lifting speed becomes slower. When it is loosened, the lifting speed becomes faster.
- When the lower knob is tightened, the lowering speed becomes slower. When it is loosened, the lowering speed becomes faster.

Reference adjustments

<table>

</tr>
</tbody>
</table>

You can operate the work clamp when the power is turned off by pressing the manual buttons (1).
4-13. Connecting the cords [8]

1. Remove the cover of the control box.
2. Loosen the two screws (1), and then open the cord presser plate (2) in the direction of the arrow.
3. Pass the bundle of cords from the machine head through the hole in the table, and then pass it through the hole in the control box together with the following cords.
   - Tow-pedal foot switch (3)
   - Operation panel (Do not pass the ground wires through the hole.)
   - Solenoid valve assembly
4. Securely connect the connectors as indicated in the table below.

<Main P.C. board>

NOTE:
- Check that the connector is facing the correct way, and then insert it firmly until it locks into place.
- Secure the cables with cable ties and cord clamps, while being careful not to pull on the connector.

* Be sure to make the ground connection. (Refer to "4-14. Connecting the ground wire").

4-14. Connecting the ground wire [9]

**CAUTION**

Be sure to connect the ground. If the ground connection is not secure, you run a high risk of receiving a serious electric shock, and problems with correct operation may also occur.

![Diagram](image)

(1) Ground wire from upper shaft motor harness  
(2) Ground wire from the machine head  
(3) Ground wire from operation panel  
(4) Ground wires from two-pedal foot switch harnesses (2 wires)

**NOTE:** Make sure that the ground connections are secure in order to ensure safety.
4-15. Securing the cords and air tubes [10]

Secure the air tubes (a), the solenoid valve assembly cord (b) and the operation panel cord (c) together underneath the table with the three cord holders (1).

1. Cord holders [3 pcs.]
2. Wood screws [3 pcs.]

<Checking the cords>
1. Gently tilt back the machine head. (Refer to "4-5. Tilting back and returning the machine head").
2. Check that none of the cords are being pulled.
3. Return the machine head to its original position.
4. Close the cord presser plate (3) in the direction of the arrow, and secure it by tightening the two screws (4).

NOTE:
- Close the cord presser plate (3) securely so that no foreign objects, insects or small animals can get inside the control box.

5. Secure the cover of the control box by tightening the eight screws (5). Check that the cords are not clamped by the cover at this time.
4-16. Installing the eye guard [11]

**CAUTION**

Attach all safety devices before using the sewing machine. If the machine is used without these devices attached, injury may result.

(1) Screw (loosen)
(2) Eye guard (tilt forward)
(3) Eye guard assembly
(4) Plain washers [2 pcs.]
(5) Screws [2 pcs.]

After installing the eye guard assembly (3), return the eye guard (2) to its original angle, and then tighten the screw (1) to secure it in place.

4-17. Installing the cotton stand [12]

(1) Cotton stand

**NOTE:**

Fit the washer (2), and then securely tighten the nut (3) so that the cotton stand does not move.
4-18. Lubrication [13]

**CAUTION**

Do not connect the power cord until lubrication is complete. If the foot switch is depressed by mistake, the sewing machine might start operating and injury could result.

Be sure to wear protective goggles and gloves when handling the lubricating oil and grease, so that they do not get into your eyes or onto your skin. If the oil and grease get into your eyes or onto your skin, inflammation can result. Furthermore, do not drink or eat the lubricating oil or grease. They may cause diarrhea or vomiting. Keep the oil out of the reach of children.

- The sewing machine should always be lubricated and the oil supply replenished before it is used for the first time, and also after long periods of non-use.
- Use only the lubricating oil <JX Nippon Oil & Energy Corporation Sewing Lube 10N; VG10> specified by Brother. * If this type of lubricating oil is difficult to obtain, the recommended oil to use is <Exxon Mobil Essotex SM10; VG10>.

1. Fill the arm oil tank and the bed oil tank with oil.

**NOTE:**

Be sure to add more oil when the oil level drops down to about one-third full in the oil gauge window (1). If the oil drops below the one-third full level in the oil gauge window (1), there is the danger that the sewing machine may seize during operation.

2. Pour oil in through the two holes of the shuttle race base assembly so that the felt (2) is lightly moistened.

**NOTE:**

- The two pieces of felt (2) should normally project by 0 to 0.5 mm from the hook race. Be careful not to push in the felt (2) when lubricating.
- If there is no more oil on the felt (2) of the shuttle race base assembly, problems with sewing may result.

3. If using the needle cooler (3), fill it with silicon oil (100 mm²/s).

(Refer to "5-3. Threading the upper thread" for details on using the needle cooler (3).)
4. INSTALLATION

4-19. Connecting the power cord [14]

[Image: Wiring diagram showing single-phase and three-phase specifications]

**CAUTION**

Be sure to connect the ground. If the ground connection is not secure, you run a high risk of receiving a serious electric shock, and problems with correct operation may also occur.

1. Attach an appropriate plug to the power cord (1). (The green and yellow wire is the ground wire.)
2. Insert the plug into a properly-grounded AC power supply.
   * The inside of the control box uses single-phase power.

**NOTE:**

- If the ground connection is not secure, electric shocks, operating errors or damage to electronic components such as P.C. boards may occur.
- Do not use an extension cord. If this is not observed, it may cause problems with correct operation.

4-20. Checking the safety switch [15]

[Image: Safety switch diagram]

1. If the machine head is tilted back, gently return it to its original position. (Refer to "4-5. Tilting back and returning the machine head").
2. Turn on the power switch.
3. Check that no error numbers are displayed on the operation panel.
   
   **<If error [E050], [E051] or [E055] is displayed>**
   
   If the safety switch (1) is not turned on, error [E050], [E051] or [E055] will occur. Check the installation position of the safety switch (1).
   
   1. Turn off the power switch.
   2. Loosen the two screws (2).
   3. Push down the right side of the safety switch (1) so that the safety switch (1) turns on, and then tighten the two screws (2).
   4. Turn on the power and check that no error numbers are displayed.
5. PREPARATION BEFORE SEWING

5-1. Installing the needle

⚠️ CAUTION

Turn off the power switch before installing the needle.
If the foot switch is depressed by mistake, the sewing machine might start operating and injury could result.

1. Loosen the set screw (1).
2. Insert the needle (2) in a straight line as far as it will go, making sure that the long groove on the needle is at the front, and then securely tighten the set screw (1).

5-2. Operating the 2-pedal foot switch

When the work clamp switch (left side) is depressed, the intermittent presser foot (1) and the work clamp (2) are lowered, and when the start switch (right side) is then depressed, the sewing machine starts operating.

* The work clamp (2) lowering method can be changed using memory switch No. 002. (Refer to "7-3. List of memory switch settings.")
5. PREPARATION BEFORE SEWING

5-3. Threading the upper thread

Thread the upper thread correctly as shown in the illustration below.
* When using threading mode for threading, the tension discs (1) will open so that the thread can be threaded more easily. (Refer to following page.)

- Turn the machine pulley (2) and raise the thread take-up (3) to its highest position before threading the upper thread. (This will make threading easier and it will prevent the thread from coming out at the sewing start.)
- When threading the thread through the needle, allow a distance of approximately 42 mm between the needle hole and the end of the thread. If the trailing length of the thread is too long, it may cause the thread to become tangled.

[If using cotton thread or spun thread]

[If using synthetic thread]
5. PREPARATION BEFORE SEWING

**<Threading mode>**

Threading mode is safe because the sewing machine will not start even when the foot switch is depressed.

<p>| | |</p>

</tr>
<tr>
<td>4</td>
<td>Ending threading mode Press the THREAD/CLAMP key. • The work clamp and the intermittent presser foot will return to the position they were at before threading mode began.</td>
</tr>
</tbody>
</table>

* The work clamp and the intermittent presser foot will be lowered. * The tension discs will open.
5. PREPARATION BEFORE SEWING

5-4. Winding the lower thread

**CAUTION**
Do not touch any of the moving parts or press any objects against the machine while winding the lower thread. Injury or damage to the sewing machine may result.

1. Place the bobbin onto the bobbin winder shaft (1).
2. Thread the thread as shown in the illustration, wind the thread around the bobbin several times, and then press the bobbin presser arm (2).
3. Turn on the power switch.
4. Depress the work clamp switch (3) to lower the work clamp, and then depress the start switch (4). (Home position detection will be carried out.)
5. Check that the needle is not touching the work clamp.
6. Depress the work clamp switch (3) to lower the work clamp.
7. While pressing the TENSION/WIND key (5), depress the start switch (4).
8. Release the TENSION/WIND key (5) after the machine starts operating, and keep depressing the start switch (4) until the lower thread stops being wound onto the bobbin. (If you release the start switch (4) while this operation is in progress, hold down the TENSION/WIND key (5) and then depress the start switch (4) to restart winding of the thread.)
9. Once winding of the set amount of lower thread (80 - 90% of the bobbin capacity) is completed, the bobbin presser arm (2) will return automatically.
10. Remove the bobbin, hook the thread onto the knife (6), and then pull the bobbin in the direction of the arrow to cut the thread.

**Adjusting the bobbin winding amount**
Loosen the screw (7) and move the bobbin presser (8) to adjust.

**If the thread winds onto the bobbin unevenly**
Loosen the set screw (9) and move the bobbin winder tension assembly (10) up and down to adjust.
* For case A, move the bobbin winder tension assembly (10) down, and for case B, move it upward.
5-5. Installing the bobbin case

**CAUTION**

- Turn off the power switch before installing the bobbin case.
- If the foot switch is depressed by mistake, the sewing machine might start operating and injury could result.

1. Pull the shuttle race cover (1) downward to open it.
2. While holding the bobbin so that the thread winds to the right, insert the bobbin into the bobbin case.
3. Pass the thread through the slot (2) and pull it out from the thread hole (3).
4. Check that the bobbin turns in the direction of the arrow when the thread is pulled.
5. Pass the thread through the lever thread hole (4), and then pull out approximately 30 mm of thread.
6. Hold the latch on the bobbin case and insert the bobbin case into the rotary hook.
5-6. Thread tension

Thread tension reference

<p>| | |</p>
<table>
<thead>
<tr>

<td>0.2 – 0.4</td>
</tr>
<tr>
<td>Needle</td>
<td>DP × 17#19</td>
</tr>
</tbody>
</table>

5-6-1. Lower thread tension

Adjust the thread tension to the weakest possible tension by turning the thread tension nut (1) until the bobbin case will not drop by its own weight while the thread end coming out of the bobbin case is held.

5-6-2. Upper thread tension

1. Turn the tension nut (1) (main tension) to adjust the tension as appropriate for the material being sewn.
2. Use the tension nut (2) (sub tension) to adjust the upper thread trailing length to about 42 mm.
5-7. Home position detection

Before starting home position detection, check that the needle bar is at the needle up stop position.

Turn the pulley (1) until the ridge at the bottom of the thread take-up (2) is aligned with the O mark on the arm.

1. Turn on the power switch.
   The POWER indicator (3) will illuminate, and the model name [342] will appear in the PROGRAM No. display (4) and [Air] will appear in the menu display (5).

   ![Diagram](image1.png)

   After this, the program number will flash in the PROGRAM No. display (4).

2. Depress the work clamp switch (6) to lower the work clamp, and then depress the start switch (7). (After home position detection is carried out, the work clamp will move to the sewing start position and then it will rise.)

   * For programs with a large number of stitches, the buzzer will sound after the home position is detected, and then the work clamp will move to the sewing start position.

   NOTE:
   If error "E110" is displayed when the start switch (7) is depressed, turn the pulley (1) in the direction of operation to clear the error display.
5-8. Setting 2-step operation for the work clamp

When these settings are made, the work clamp (1) can be lowered in two steps.

1. Set memory switch No. 002 to "1". (Refer to "7-2. Setting memory switches".)
2. With the work clamp (1) raised, loosen the wing screw (2).
3. Move the work clamp stopper (3) up or down to determine the intermediate position, and then tighten the wing screw (2) to secure the work clamp stopper (3) in place.
4. Depress the work clamp switch (4) to the 1st step and check the intermediate position for the work clamp.
5. Depress the work clamp switch (4) to the 2nd step to fully lower the work clamp.

* 2-step work clamp operation is enabled when memory switch No. 002 is set to "1".
* Do not set memory switch No. 002 to "2".

<To return the work clamp to one-step operation>
1. Set memory switch No. 002 to "0". (Refer to "7-2. Setting memory switches".)
2. With the work clamp (1) raised, loosen the wing screw (2).
3. Move the work clamp stopper (3) to its highest position, and then tighten the wing screw (2) to secure the work clamp stopper (3) in place.
6. USING THE OPERATION PANEL (BASIC OPERATIONS)

6-1. Name and function of each operation panel item

1. Power indicator
   Illuminates when the power is turned on.

2. CAUTION indicator
   Illuminates when an error occurs.

3. RESET key
   Used to reset errors.

4. TEST key
   Used to start test mode.

5. TEST indicator
   Illuminates when the TEST key (4) has been pressed.

6. THREAD/CLAMP key
   Used to start threading mode or work clamp height setting mode.

7. THREAD/CLAMP indicator
   Illuminates when the THREAD/CLAMP key (6) has been pressed.

8. TENSION/WIND key
   Used to wind the lower thread.

9. TENSION/WIND indicator
   Used when the digital tension set (option) is installed.
(10) X-SCALE indicator
Illuminates when the SELECT key (15) is pressed to show the X-scale setting.

(11) Y-SCALE indicator
Illuminates when the SELECT key (15) is pressed to show the Y-scale setting.

(12) SPEED indicator
Illuminates when the SELECT key (15) is pressed to show the sewing speed setting.

(13) COUNTER indicator
Illuminates when the SELECT key (15) is pressed to show the lower thread or production counter setting.

(14) SPLIT No. indicator
Illuminates when the SELECT key (15) is pressed to show the split setting when split data (for specifying a pause while the program is running) exists.

(15) SELECT key
Used to select a menu (X-scale, Y-scale, sewing speed and counter).

(16) Menu display
Displays information such as menu setting values, memory switch settings and error codes.

(17) Setting keys ▼ ▲
Used to change the value which is displayed in the menu display (16).
In addition, it is used to move the needle position forward and back when sewing has been paused.

(18) PROGRAM No. display
Displays information such as program numbers.

(19) Setting keys ▼ ▲
Used to change the value which is displayed in the PROGRAM No. display (18).

(20) CF media indicator
Illuminates when a CF card (external media) is inserted while the power is turned on.

(21) FD media indicator
Illuminates when the FDD set (option) is connected.

(22) Function keys [F1, F2, F3, F4]
Used to select user programs and to set and select cycle programs.

(23) R/W key
Used to read data from and write data to external media.

CF™ is a trademark of SanDisk Corporation.
### 6-2. Loading sewing data

Refer to "8-1. Notes on handling CF cards (sold separately)" for details on using CF cards.

1. **With the power turned off, insert the CF card into the CF slot.**
   **NOTE:**
   - Make sure the CF card is facing the correct way when inserting it.
   - Always be sure to keep the cover closed except when inserting and removing the CF card. If this is not done, dust may get inside and cause problems with operation.

2. **Turn on the power switch.**
   Press the △ or ▽ key to select the program number (100 – 999).
   * The "---" display is used to check the feed home position.

3. **Press the R/W key.**
   - The buzzer will sound and the selected sewing data will be loaded from the CF card and copied into the sewing machine's internal memory.

4. **Loading complete**
   The PROGRAM No. display will change from " P" to the selected program number.
   Turn off the power switch, remove the CF card, and then close the cover of the CF slot.

### 6-3. Setting the program number

1. **Press the △ or ▽ key (1) to select the program number that is loaded into the internal memory.**
   - The program number will flash in the PROGRAM No. display (2).
   - "---" will appear at the time of shipment from the factory. (For checking feed home position)

2. **Depress the work clamp switch (3) to lower the work clamp, and then depress the start switch (4).**
   - The work clamp will move to the sewing start position, and then the program number will be applied.
   - The program number will stop flashing and illuminate steadily.

**NOTE:**
After completing the setting, be sure to refer to "6-6. Checking the sewing pattern" to check that the needle drop position is correct.
6-4. Setting the X-scale and Y-scale

The scales are set to 100 (%) at the time of shipment from the factory.
1. Press the SELECT key (1) so that the X-SCALE indicator (2) (for X-scale setting) or the Y-SCALE indicator (3) (for Y-scale setting) is illuminated.
   • The setting value (%) will appear in the menu display (4).
   * When memory switch no. 402 is set to "ON", the settings will be displayed in units of mm.
2. Press the ▲ or ▼ key (5) to set the scale (0 – 400).
   • The program number will flash in the PROGRAM No. display (6).
3. Depress the work clamp switch (7) to lower the work clamp, and then depress the start switch (8).
   • The work clamp will move to the sewing start position, and then the scales will be applied.
   • The program number will stop flashing and illuminate steadily.

**NOTE:**
After completing the setting, be sure to refer to "6-6. Checking the sewing pattern" to check that the needle drop position is correct.

6-5. Setting the sewing speed

The sewing speed is set to 2000 (sti/min) at the time of shipment from the factory.
1. Press the SELECT key (1) until the SPEED indicator (2) illuminates.
   • The setting value (sti/min) will appear in the menu display (3).
2. Press the ▲ or ▼ key (4) to set the sewing speed.
   (Sewing speed setting: 400 – 2700)
6-6. Checking the sewing pattern

Use test feed mode to check the needle movement with only the work clamp operating.
Check that the needle hole in the needle plate does not come out from the frame of the work clamp.

1. Press the TEST key.

2. Select the program number to be checked, and then set the X-scale and the Y-scale.
   - The program number will flash.
   - Depress the work clamp switch (1) to lower the work clamp, and then depress the start switch (2).
   - The work clamp will move to the sewing start position, and then the program number will stop flashing and illuminate steadily.
   - The number of stitches will appear in the menu display.

3. Depress the work clamp switch (1) to lower the work clamp, and then depress and release the start switch (2).
   - The work clamp will start moving continuously one stitch at a time.
   - [Fast-forward test mode]
     If the work clamp switch (1) is depressed while the work clamp is moving, the feeding speed can be increased while the work clamp switch (1) is depressed.

4. Press the TEST key.
   - If test feeding continues until the final stitch, the work clamp will move to the sewing start position and then stop.

Press the TEST key.
6-7. Setting the height of the intermittent presser foot

You can use the operation panel to change the setting value for the intermittent presser foot height.

1. Press the THREAD/CLAMP key. The sewing machine will switch to threading mode.
   - "1" will appear in the PROGRAM No. display and the intermittent presser foot (1) will drop.

2. Press the ▲ key. The sewing machine will switch to intermittent presser foot height setting mode.
   - "4" will appear in the PROGRAM No. display and the intermittent presser foot (1) will rise to the setting value that appears in the menu display.
   (Intermittent presser foot height setting: 0.0 – 10.0)

3. Press the ▲ or ▼ key to set the intermittent presser foot height.
   - The intermittent presser foot (1) will be raised or lowered to the height of the new value that has been set.

   <Changing modes>
   "1" Threading mode
   "4" Intermittent presser foot height setting mode

4. Press the THREAD/CLAMP key. The setting values will be memorized.
   - The intermittent presser foot (1) will return to the status that it was at before the sewing machine was switched to setting mode.

   Ending setting mode

   Intermittent presser foot operation

   During standby
   When lowered
   While sewing

   ① Intermittent presser foot lift amount
   ② Intermittent presser foot height
      The settings can be made by the above operations.
      However, if the intermittent presser foot height is set to a smaller setting than the intermittent presser foot stroke, the intermittent presser foot will not drop in order to prevent it from coming into contact with the needle plate. (Refer to page 63.)
   ③ Intermittent stroke
      Refer to "11-13. Changing the intermittent stroke" when making the adjustment.

   1. 22 mm
   2. 0 mm
   3. 0 mm
   4. 10 mm
7. USING THE OPERATION PANEL (ADVANCED OPERATIONS)

7-1. List of advanced functions

While holding down the TEST key, press the corresponding combination key.

7-2. Setting memory switches

1. **Menu indicator switches off**
   - **TEST indicator illuminates**
   - **All indicators switch off**

   While pressing the SELECT key, turn on the power switch.
   - Keep pressing the SELECT key until the model name is displayed and the buzzer beeps once.

   or
   - With the power turned on, press the TEST key and the TENSION/WIND key simultaneously.

   • The memory switch number will appear in the PROGRAM No. display, and its setting value will appear in the menu display.

2. **Press the ▲ or ▼ key to select the memory switch number.**
   - (Refer to “7-3. List of memory switch settings” on the next page.)
   - Press the ▲ or ▼ key to change the setting.

   If you would like to display only the numbers of memory switches that have been changed from default settings

   While pressing the SELECT key, press the ▲ or ▼ key.
   - The numbers of memory switches that have been changed from default settings will appear in order.
   - If no memory switches have been changed from their default settings, the display will not change and the buzzer will beep twice.

3. **Ending setting mode**
   - **TEST indicator switches off**
   - **Press the TEST key.**
   - The changes will be memorized and the sewing machine will switch to home position detection standby.

   • If you would like to return the setting for a single memory switch to the default setting, press the RESET key while the number for that memory switch is displayed.

   • To return the settings for all memory switches to the default settings, keep pressing the RESET key for two or more seconds until the buzzer makes a long beep.

* (*1) The position of the work clamp stopper must be set. (Refer to "5-8. Setting 2-step operation for the work clamp").
* (*2) The mm display may differ slightly from the actual sewing size.
7-4. Using the lower thread counter

If you use the lower thread counter to set the number of articles which can be sewn with the amount of lower thread available, you can stop the lower thread running out in the middle of sewing a pattern.

<Setting defaults>

1. Each time the sewing of a single article is completed, the value shown in the menu display (2) is reduced by 1.
2. When the lower thread counter reaches "0000", the buzzer will sound continuously. The sewing machine will not operate during this time, even if the foot switch is depressed.
3. When you press the RESET key (3), the buzzer will stop, the initial value will appear in the menu display (2) and sewing will be possible.
   - If no initial value has been set, the display will be "0000".
   - You can press the ▲ or ▼ key (4) to set the lower thread counter to a desired value. However, this value will not be stored as the initial value.
4. If a lower thread counter value is set, the lower thread counter will operate even if the lower thread counter is not being displayed.

While pressing the TEST key, press the ▼ key.

- The initial value which was set previously will appear in the menu display.

Press the ▲ or ▼ key to set the initial value.
- The initial value can be set from 1 ("0001") to 9999 ("9999").
- If the initial value is set to "0000", the lower thread counter will not operate.
- If you press the RESET key during setting mode, the value will become "0000".

If you press the R/W key during setting mode, the initial value for the program number being displayed will be stored, and you can set the lower thread counter separately for each item of sewing data.

Press the TEST key.
- The initial value will be memorized.

* You can press the ▲ or ▼ key (4) to set the lower thread counter to a desired value. However, this value will not be stored as the initial value.

If you press the R/W key during setting mode, the initial value for the program number being displayed will be stored, and you can set the lower thread counter separately for each item of sewing data.

TEST indicator illumi nates, COUNTER indicator flashes

Press the ▲ or ▼ key to set the initial value.
- The initial value can be set from 1 ("0001") to 9999 ("9999").
- If the initial value is set to "0000", the lower thread counter will not operate.
- If you press the RESET key during setting mode, the value will become "0000".

If you press the R/W key during setting mode, the initial value for the program number being displayed will be stored, and you can set the lower thread counter separately for each item of sewing data.

Press the TEST key.
- The initial value will be memorized.
7-5. Using the production counter

<Setting the counter value>

1. While pressing the TEST key, press the ▲ key.

   TEST indicator and SPEED indicator illuminate
   COUNTER indicator flashes

2. Press the ▲ or ▼ key to set the counter value.
   - The counter value can be set to between "000" "0000" and "999" "9999".
   - If you press the RESET key during setting mode, the value will become "000" "0000".

3. Ending setting mode

   TEST indicator switches off

   Press the TEST key.
   - The counter value will be memorized.

<Production counter operation>

If you press the SELECT key (1) to select the counter display menu when memory switch no. 300 is set to "ON", the SPEED and COUNTER indicators will illuminate and the production counter will appear in the menu display (2).

1. Each time the sewing of a single article is completed, the value shown in the menu display (2) is increased by 1.
2. While the ▲ key (3) is being pressed, the first three digits will appear in the PROGRAM No. display (4) so that the total number of digits displayed will be seven.
3. If you press the RESET key (5) for 2 seconds or more, the counter value will be reset to [0000].

Temporary display function

You can display the production counter temporarily while the lower thread counter is being displayed.

When the SPEED indicator is illuminated, hold down the TEST key (6) and then press the RESET key (5) to display the production counter in the menu display (2).

Press the TEST key (6) or the SELECT key (1) to switch the menu back to the normal menu display.

* You can start sewing while the temporary display still appears.
7. USING THE OPERATION PANEL (ADVANCED OPERATIONS)

7-6. Setting the split number

If split data (data that causes sewing to pause) exists within a single program, the numbers that are used to specify the patterns that are separated by split data are called split numbers.

Pattern 1: Split No. 1
Pattern 2: Split No. 2
Pattern 3: Split No. 3

1. Press the \( \Delta \) or \( \nabla \) key (1) to select a program number for a program that contains split data.
   - The program number will flash in the PROGRAM No. display (2).

2. Depress the work clamp switch (3) to lower the work clamp, and then depress the start switch (4).
   - The work clamp will move to the sewing start position, and then the program number will be applied.
   - The program number will stop flashing and illuminate steadily.

3. Press the SELECT key (5) so that the SPLIT No. indicator (6) illuminates.
   - The split number will appear in the menu display (7).

4. Press the \( \Delta \) or \( \nabla \) key (8) to set the split number.

The setting for memory switch No. 403 lets you select the split mode.

**[Continuous split]**
Memory switch No. 403 = 0 (Split mode is enabled after split data is detected)
Memory switch No. 403 = 1 (Split mode is always enabled)
   - Sewing is carried out each time in the order of steps 1 \( \rightarrow \) 2 \( \rightarrow \) 3 \( \rightarrow \) 1 (for example, if there are two sections of split data).

**[Independent split]**
Memory switch No. 403 = 2
   - The pattern for the displayed split number is sewn independently.
7-7. Using user programs

Up to 50 different combinations of settings including program no., X-scale, Y-scale, sewing speed and intermittent presser foot height can be memorized as user programs (U1 to U50).

If you are sewing certain patterns over and over again, it is useful to record the settings for these patterns into a user program.

User programs are enabled when memory switch no. 400 is set to "ON".

<Recording user programs>

1. Select a user program number.

While pressing the TEST key, press the SELECT key.

- Switch to user program recording mode. Check that the menu indicators are flashing.
- The user program number will appear in the PROGRAM No. display, and " P- - - " will appear in the menu display.

Press the ▲ or ▼ key to select the user program number.

2. First, set the program number.

Press the ▲ or ▼ key to set the user program number to be recorded.

NOTE:
Select a program number that is recorded in the internal memory. You cannot specify program numbers on removable media.

3. Next, set the X-scale.

Press the SELECT key.

Press the ▲ or ▼ key to set the X-scale to be recorded.

X-SCALE indicator flashes

4. Next, set the Y-scale.

Press the SELECT key.

Press the ▲ or ▼ key to set the Y-scale to be recorded.

Y-SCALE indicator flashes
5 Next, set the sewing speed.

- **X-SCALE**
  - Press the SELECT key.
  - **SPEED** indicator flashes
  - Press the ▲ or ▼ key to set the sewing speed to be recorded.

- **Y-SCALE**

6 Next, set the intermittent presser foot height.

- THREAD/CLAMP indicator flashes
  - Press the SELECT key.
  - Press the ▲ or ▼ key to set the intermittent presser foot height to be recorded.

7 TEST indicator illuminates, MENU indicator flashes

- If setting further user programs, select the user program number and then repeat steps 2 to 7.

8 End user program recording mode.

- TEST indicator switches off, MENU indicator illuminates

This completes the recording of a user program.
- The user program number will flash in the PROGRAM No. display.

(Continued on next page)
7. USING THE OPERATION PANEL (ADVANCED OPERATIONS)

<Setting method>

1. Press the △ or ▼ key (1) to select the user program number that you would like to use.
   - If the user program number is flashing, depress the work clamp switch (2) to lower the work clamp, and then depress the start switch (3). (The work clamp will move to the sewing start position.)
   - User programs U1 to U10 can be selected directly using function keys F1 to F4 (4). (Refer to "7-9. Direct selection").
2. Check that the needle drop position is correct, and then start sewing. (Refer to "6-6 Checking the sewing pattern").
   - If you press the SELECT key (5), you can check the settings for the displayed user program (such as X-scale, Y-scale and sewing speed).

<Clearing method>

1. While pressing the TEST key, press the SELECT key
   - Switch to user program recording mode. Check that the menu indicators are flashing.
   - The user program number will appear in the PROGRAM No. display, and the program number will appear in the menu display.
   - Press the △ or ▼ key (1) to select the user program number that you would like to clear.

2. Press the RESET key.
   - The buzzer will sound and the user program with the number selected will be cleared.

NOTE:
If a cleared user program has been stored as part of a cycle program, the step that involves that user program will become blank. The cycle program itself will not be cleared.

Clearing all user programs

Press and hold the RESET key for 2 seconds or more.
- The buzzer will sound and all user programs will be cleared.

NOTE:
If any cycle programs have been memorized, all of the memorized cycle programs will also be cleared.
7-8. Using cycle programs

Sewing patterns that have been recorded in user programs can be recorded in up to nine cycle programs (C-1 to C-9). One cycle program can contain up to a maximum of fifteen steps. When sewing the sewing patterns in numerical order, it can be useful to record them in a cycle program beforehand. Cycle programs are enabled when memory switch nos. 400 and 401 are set to "ON".

<Recording method>

1. **Switch to user program recording mode.**
   
   While pressing the TEST key, press the SELECT key.

   - Check that the menu indicators are flashing.
   - The user program number will appear in the PROGRAM No. display, and the program number will appear in the menu display.

   Record the sewing pattern that you would like to use in a cycle program into a user program.

2. **Switch to cycle program recording mode, and select the cycle program number.**
   
   Press a function key from F1 to F4.

   - The cycle program number (C-1 to C-4) will appear in the PROGRAM No. display, and "1.--" will appear in the menu display.

   Press the function key (F1 to F4) or press the or key to select the cycle program number.

3. **Set step 1.**
   
   Press the or key to select the user program number that you would like to record.

   Press the SELECT key.

4. **Set the rest of the steps in the same way from step 2 onward.**
   
   From step 9 onward, "A.--", "b.--", "c.--", "d.--", "E.--" and "F.--" will be displayed.

   If you would like to return to a previous step during the setting procedure

   <For cycle programs C-1 to C-4>
   1. Press the respective function key from F1 to F4 to return to the display for step 1.
   2. Press the SELECT key until the desired step is reached.

   <For cycle programs C-5 to C-9>
   1. Press the or key to switch the cycle program number.
   2. Select the desired cycle program number again, and then press the SELECT key until the desired step is reached.
5 To record another cycle program, repeat steps 2 to 4.

6 End cycle program recording mode.

Press the TEST key.

This completes the recording of cycle programs.

- The cycle program number will flash in the PROGRAM No. display.

<Setting method>

1. Press the \( \Delta \) or \( \nabla \) key (1) to select the cycle program number that you would like to use.
   - If the cycle program number is flashing, depress the work clamp switch (2) to lower the work clamp, and then depress the start switch (3). (The work clamp will move to the sewing start position.)
   - The cycle program number can be selected directly by pressing function keys F1 to F4 (4). (Refer to "7-9. Direct selection").
2. Check that the needle drop position is correct, and then start sewing. (Refer to "6-6 Checking the sewing pattern").
3. The recorded user program will be sewn step by step, and when the final step is complete, the menu display (5) will return to showing step 1.

- If you press the \( \Delta \) or \( \nabla \) key (6), you can return to the previous step or skip to the next step respectively.
- If you press the SELECT key (7), you can check the details (such as X-scale, Y-scale and sewing speed) of the user program for the displayed step. The setting cannot be changed at this time.

**NOTE:**

If cycle program sewing mode is active (when memory switch no. 401 is "ON") but no cycle programs have been recorded, the user programs will be sewn in numeric order. "C-0" will appear in the PROGRAM No. display at this time.
<Clearing method>

1

While pressing the TEST key, press the SELECT key.

- Switch to user program recording mode. Check that the menu indicators are flashing.

2

Press a function key from F1 to F4.

- Switch to cycle program recording mode.

Press the function key (F1 to F4) or press the △ or ▼ key to select the cycle program number to clear.

3

Press the RESET key.

- The buzzer will sound and the cycle program with the number selected will be cleared.

Clearing all cycle programs

Press and hold the RESET key for 2 seconds or more.

- The buzzer will sound and the all cycle programs will be cleared.

NOTE: If you clear all user programs after any cycle programs have been recorded, all recorded cycle programs will also be cleared.

7-9. Direct selection (combination table)

You can use the function keys to directly select user program numbers and cycle program numbers. U1 to U4 and C-1 to C-4 can be selected using function keys F1 to F4. U5 to U10 and C-5 to C-9 can be selected by simultaneously pressing combinations of function keys F1 to F4 (addition).

7-10. X and Y parallel movement of sewing pattern

You can move the feed mechanism to the desired position to move an already-programmed sewing pattern in a parallel direction up, down or to the left or right.

1. Press the △ or ▽ key to select the program number.
2. Depress the work clamp switch (1) to lower the work clamp, and then depress the start switch (2).

- The work clamp will move to the sewing start position.

2. Depress the work clamp switch (1) to lower the work clamp.

3. While pressing the TEST key, press the ▽ key.

- The parallel movement amount will appear in the menu display in units of mm.

4. Press the SELECT key to switch between the X-SCALE indicator and Y-SCALE indicator flashing. Select either direction.

   - The work clamp will move by 0.05 mm each time the △ or ▽ key is pressed. (When the distance reaches 10 mm, the amount of movement will change to 0.1 mm.)
   - When using X-scale parallel movement mode, the needle moves the corresponding distance to the right when the △ key is pressed, and to the left when the ▽ key is pressed.
   - When using Y-scale parallel movement mode, the needle moves the corresponding distance backward when the △ key is pressed, and forward when the ▽ key is pressed.

5. End parallel movement mode

   - Press the TEST key.

   TEST indicator switches off

**NOTE:**
- The feed mechanism will not move to a position that would move the sewing pattern outside the sewing area.
- If you change the program number, X-scale or Y-scale settings, the amount of movement recorded will be reset.
- In addition, the amount of movement will be reset if the power switch is turned off and then back on again. However, memory switch No. 465 is set to "ON", the amount of movement will be recorded and will not be reset. (Refer to the service manual for details on memory switch No. 465.)
7-11. Clearing memory data (reinitialization)

If the sewing machine stops operating normally, the cause may be that an incorrect memory setting may have been made by means of the memory switch, for instance. In such cases, normal operation may be restored if the memory data is reinitialized.

<table>
<thead>
<tr>

<tr>
<td>5</td>
<td>[EoP] Clearing expansion option output data</td>
</tr>
</tbody>
</table>

* Refer to the instruction manual for the programmer for details of expansion option output.

1. **All indicators switch off**

   While holding down the RESET key, turn on the power switch.
   * Keep pressing the RESET key until the model name is displayed and the buzzer beeps once.

2. **Press the \( \Delta \) or \( \nabla \) key to select the parameter number that you would like to reinitialize.**

3. **Press and hold the RESET key for 2 seconds or more.**
   - A long beep will sound and the data for the selected item will be reinitialized.
   - The setting details for only the initialized item will change from flashing to steadily illuminated.

4. **End data initialization mode**

   Press the TEST key.

   All indicators switch off
8. USING CF CARDS

8-1. Notes on handling CF cards (sold separately)

- Use a CF card with a memory capacity of 32, 64, 128, 256, 512 MB, 1GB or 2GB. (CF cards with a capacity of more than 2GB are not supported.)
- Do not disassemble or modify the CF card.
- Do not bend, drop or scratch CF cards or place heavy objects on top of them.
- Avoid contact with liquids such as water, oil, solvents or drinks.
- Use and store CF cards in locations that are free from strong static electricity and electrical interference.
- Do not use or store CF cards in places where they may be subject to vibrations or shocks, direct sunlight, high temperature or humidity or strong magnetic fields from equipment such as speakers, or places which are dusty from thread scraps, etc.
- Do not subject CF cards to shocks or impacts or remove them from the sewing machine while data is being loaded or written.
- The data on the CF cards may become lost or corrupted due to some malfunction or accident. It is recommended that you make a backup of important data.
- CF cards should only be removed after the power for the sewing machine has been turned off.
- CF cards are already formatted when they are purchased, and so you should not reformat them.
- The recommended CF cards are commercially-available ones from SanDisk or HAGIWARA SYS-COM. CF cards from other manufacturers can be used, but different formatting methods may mean that loading from or writing to such cards may not be possible.

For more information, refer to the documentation provided with the CF card.

* This product is compatible with CF cards that have been formatted using the FAT16 method. Cards that have been formatted using the FAT32 method cannot be used.
* CF™ is a trademark of SanDisk Corporation.
* Company names and product names appearing in this manual are trademarks or registered trademarks of the respective owners. However, no TM or other similar symbols appear in the main text of this manual.

8-2. Structure of a CF card folder

\BROTHER\ISM\ISMSYS\ISM05MN.MOT : Control program
\BROTHER\ISM\ISMDB00\ISMMSW.SEW : Memory switch data
   *1 \ISMUPG.SEW : User program data
   \ISMS0100.SEW : Sewing data P No. = 100
   \ISMS0101.SEW : Sewing data P No. = 101
   \ISMS0102.SEW : Sewing data P No. = 102
   : 

*1 The underlined portion of the name of the \BROTHER\ISM\ISMDB00 folder for sewing data can be changed by changing the setting for memory switch No. 752 in order to change the folder name. Change the folder name if you would like to store sewing data for different sewing machines on a single CF card. (Refer to the service manual for details on memory switch No. 752.)
8-3. Data read/write mode

1. With the power turned off, insert the CF card into the CF slot.

NOTE:
- Make sure the CF card is facing the correct way.
- Always be sure to keep the cover closed except when inserting and removing the CF card. If this is not done, dust may get inside and cause problems with operation.
- If no valid data can be found, the CF media indicator will not illuminate.

2. Turn on the power switch.

3. Switch to data read/write mode.

While pressing the TEST key, press the R/W key.
- The mode number will appear in the PROGRAM No. display, and the setting details for that mode will appear in the menu display.
- The initial mode is sewing data reading mode. (Refer to the read/write mode list)

4. Press the △ or ▽ key to select the mode.

<td>Turn off the power switch, remove the CF card, and then close the cover of the CF slot.</td>
</tr>
</tbody>
</table>

**TEST indicator switches off**
8-3-2. Writing all sewing data to the CF card at once

1. Select the [w 2] data read/write mode.

2. Press the R/W key.
   - [SEd-] will change to [ALL].
   - If you press the ▲ or ▼ key to select the program numbers that you would like to write and then continue to carry out the following procedure, you can write the selected sewing data in separate lots.

3. Press the R/W key.
   - The buzzer will sound and the all sewing data will be copied from the internal memory onto the CF card.
   - The program numbers that have been written will appear in the menu display.
   - If there is a large volume of data in the internal memory, it will take some time for all of it to be written. To halt the writing of data, press the STOP switch. If you then press the RESET key, the display will change back to [ALL].

4. End data read/write mode
   - Press the TEST key.
   - Turn off the power switch, remove the CF card, and then close the cover of the CF slot.

Refer to the service manual for details on other read/write modes.
9. SEWING

CAUTION

Turn off the power switch at the following times.
If the foot switch is depressed by mistake, the sewing machine might start operating and injury could result.
- When threading the needle
- When replacing the bobbin and needle
- When not using the machine and when leaving the machine unattended
Do not touch any of the moving parts or press any objects against the machine while sewing, as this may result in personal injury or damage to the machine.

9-1. Sewing

1. Turn on the power switch.
2. Press the △ or ▼ key (1) to select the sewing program number that you would like to use.
   * Refer to "6-2. Loading sewing data" for details on reading sewing data from a CF card.
3. Depress the work clamp switch (2) to lower the work clamp (3), and then depress the start switch (4).
   - The work clamp will move to the sewing start position.
   - Home position detection will be carried out immediately after the power switch is turned on.
4. Place the article to be sewn underneath the work clamp (3).
5. Depress the work clamp switch (2).
   - The work clamp (3) will drop.
6. Depress the start switch (4).
   - The sewing machine will start sewing.
7. When sewing is complete, the thread will be trimmed and the work clamp (3) will rise.

Use a work clamp and a feed plate which will hold the article securely so that it does not slip.
If using the standard work clamp and feed plate and the article being sewn is slipping, take measures to stop the work clamp and feed plate from being slippery.
9-2. Using the STOP switch

If you press the STOP switch (1) while sewing or test feeding is in progress, the CAUTION indicator (2) will illuminate and the sewing machine will stop immediately.

<Clearing>
1. Press the RESET key (3).
   - The thread will be trimmed, and then the CAUTION indicator (2) will switch off and the buzzer will stop sounding.
2. If you do not wish to continue sewing, press the RESET key (3) once more.
   - The program number will flash. Carry out preparation for the next sewing.

<Continuing sewing from a stopping point>
If you have pressed the STOP switch (1) at times such as if the thread breaks while sewing or the lower thread runs out, you can resume sewing from the point where the thread ran out.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
| 1 | Press the RESET key.  
   - The thread will be trimmed, and then the CAUTION indicator will switch off and the buzzer will stop sounding. |
| 2 | Press the ▼ key to return the work clamp to the position where sewing is to be continued.  
   - When the ▼ key is pressed, the work clamp will move backward by one stitch, and when the ▲ key is pressed, the work clamp will move forward by one stitch. (It will move quicker if you keep the key pressed down.) |
| 3 | Depress the start switch (4).  
   - The sewing machine will start operating and sewing will start. |

9-3. Using the thread wiper switch

The thread wiper switch (1) can be used to turn the thread wiper (2) on and off.
10. CLEANING

CAUTION

- Turn off the power switch before carrying out cleaning. If the foot switch is depressed by mistake, the sewing machine might start operating and injury could result.
- Be sure to wear protective goggles and gloves when handling the lubricating oil and grease, so that they do not get into your eyes or onto your skin. If the oil and grease get into your eyes or onto your skin, inflammation can result. Furthermore, do not drink or eat the lubricating oil or grease. They may cause diarrhea or vomiting.
- Keep the oil out of the reach of children.

10-1. Cleaning the rotary hook

1. Pull the shuttle race cover downward to open it, and then remove the bobbin case.

2. Open the setting claw (1) in the direction indicated by the arrow, and then remove the shuttle race base (2) and the shuttle hook (3).

3. Clean all the dust and thread ends from around the driver (4), the top of the rotary hook thread guide and the shuttle race.

10-2. Draining the oil

1. Remove and empty the oiler (1) whenever it is full.
2. After emptying oiler (1), screw it back into its original position.
10-3. Checking the regulator

1. If water collects in the bottle of the regulator (1), turn the drain cock (2) in the direction of the arrow to drain the water.
2. After draining the water, tighten the drain cock (2).

10-4. Cleaning the control box air inlet ports

Use a vacuum cleaner to clean the filter in the air inlet ports (2) of the control box (1) at least once a month.

10-5. Cleaning the eye guard

Wipe the eye guard clean with a soft cloth.

NOTE:
Do not use solvents such as kerosene or thinner to clean the eye guard.

10-6. Checking the needle

Always check that the tip of the needle is not broken and also that the needle is not bent before starting sewing.

10-7. Lubrication

Lubricate the sewing machine while referring to "4-18. Lubrication".
11. STANDARD ADJUSTMENTS

CAUTION

Maintenance and inspection of the sewing machine should only be carried out by a qualified technician. Ask your Brother dealer or a qualified electrician to carry out any maintenance and inspection of the electrical system.

Turn off the power switch and disconnect the power cord before carrying out the following operations. If the foot switch is depressed by mistake, the sewing machine might start operating and injury could result.

- Inspection, adjustment and maintenance
- Replacing consumable parts such as the rotary hook

Disconnect the air hoses from the air supply and wait for the needle on the pressure gauge to drop to “0” before carrying out inspection, adjustment and repair of any parts which use the pneumatic equipment.

If the power switch and air need to be left on when carrying out some adjustment, be extremely careful to observe all safety precautions.

Hold the machine head with both hands when tilting it back or returning it to its original position. In addition, do not subject the machine head to extra force while it is tilted back. If this is not observed, the machine head may become unbalanced and fall down, and serious injury or damage to the sewing machine may result.

Be sure to wear protective goggles and gloves when handling the lubricating oil and grease, so that they do not get into your eyes or onto your skin. If the oil and grease get into your eyes or onto your skin, inflammation can result. Furthermore, do not drink or eat the lubricating oil or grease. They may cause diarrhea or vomiting. Keep the oil out of the reach of children.

If any safety devices have been removed, be absolutely sure to re-install them to their original positions and check that they operate correctly before using the machine.

11-1. Adjusting the thread take-up spring

.Thread take-up spring height (mm) 7 – 10
.Thread take-up spring tension (N) 0.6 – 1.2

<Thread take-up spring height>
Loosen the set screw (1) and turn the adjuster to adjust.

<Thread take-up spring tension>
1. Press the upper thread slightly above the tension bracket (2) with a finger to stop the thread spooling out.
2. Pull the upper thread downward so that the thread take-up spring (3) is extended to the same height as the base of the thread guide arm (4), and then measure the tension of the thread take-up spring (3).
3. Use a screwdriver to turn the tension stud (5) in order to adjust the tension of the thread take-up spring (3).

NOTE:
If the thread tension spring (3) is not adjusted correctly, the upper thread trailing length will be uneven after thread trimming.
11-2. Adjusting arm thread guide R

The standard position of arm thread guide R (1) is when the screw (2) is aligned with the index mark. Loosen the screw (2) and move arm thread guide R (1) to adjust.

* When sewing heavy material, move arm thread guide R (1) to the left. (The thread take-up amount will become greater.)
* When sewing light material, move arm thread guide R (1) to the right. (The thread take-up amount will become less.)

11-3. Adjusting the needle bar height

Turn the machine pulley to move the needle bar to the lowest position. Then remove the rubber plug (2), loosen the screw (3) and then move the needle bar up or down to adjust so that the second reference line from the bottom of the needle bar (reference line A) is aligned with the lower edge of the needle bar bush (1).

* If using a DP X 5 needle, use the highest reference line (reference line a).

11-4. Adjusting the needle bar lift amount

Turn the machine pulley to raise the needle bar from the lowest position until the lowest reference line on the needle bar (reference line B) is aligned with the lower edge of the needle bar bush (1), and then loosen the bolt (2) and move the driver (3) so that the tip of the rotary hook is aligned with the center of the needle.

* If using a DP X 5 needle, use the second reference line from the top of the needle bar (reference line b).
11-5. Adjusting the driver needle guard

Turn the machine pulley to align the tip of the rotary hook with the center of the needle, and then loosen the set screw (2) and turn the adjusting stud (3) to adjust so that the driver needle guard (1) is touching the needle.

**NOTE:**
If it crosses the needle more than necessary, it will place a load on the needle, or it may cause poor thread tension. Furthermore, if it does not cross the needle at all, the tip of the rotary hook will interfere with the needle and skipped stitches may occur.

11-6. Adjusting the needle clearance

Turn the machine pulley to align the tip of the rotary hook with the center of the needle, and then loosen the set screw (1) and turn the adjusting stud (2) to adjust so that the clearance between the needle and the rotary hook is 0.01 – 0.08 mm.

11-7. Adjusting the shuttle race thread guide

Install the shuttle race thread guide (1) by pushing it in the direction of the arrow so that the needle groove is aligned with the center of the needle plate hole.

**NOTE:**
If the shuttle race thread guide (1) is in the wrong position, thread breakages, soiled thread or tangling of the thread may occur. The position of the shuttle race thread guide (1) is adjusted at the time of shipment from the factory. It should not be changed if possible.
11-8. Adjusting the rotary hook lubrication amount

<Adjusting by changing the pressure on the oil tube>
The optimum position is when the head of the set screw (1) is aligned with the edge of the bed. The rotary hook lubrication amount can be adjusted within three turns to the right from that position.

- If the set screw (1) is turned clockwise, the lubrication amount becomes smaller.
- If the set screw (1) is turned counterclockwise, the lubrication amount becomes greater.

* If you would like the lubrication amount to be increased further from the position the head of the set screw (1) is aligned with the edge of the bed, use the following method to make the adjustment.

<Adjusting by changing the amount of oil supplied from the sub-tank>
1. Remove the four screws (1), and then remove the X motor cover (2).
2. Tilt back the machine head.
3. Insert a screwdriver into the holes in the left side of the sewing machine bed and loosen the two bolts (3).
4. Move the sub-tank (4) up or down to adjust its position, and then tighten the two bolts (3).
   - If the position of the sub-tank (4) is raised, the lubrication amount will increase.
   - If the position of the sub-tank (4) is lowered, the lubrication amount will decrease.
5. Return the machine head to its original position.
6. Install the X motor cover (2) with the four screws (1).
11. STANDARD ADJUSTMENTS

11-9. Adjusting the position of the movable knife

1. Open the top cover and tilt back the machine head.
2. Turn the pulley (1) by hand to lower the needle bar to its lowest position, and push the thread trimmer solenoid (2) as far as it will go.
3. With the collar (3) inserted into the groove of the thread trimmer cam (4), turn the pulley (1) by hand to set the driving lever (5) to the reverse position (when the thread take-up (6) is close to its lowest position).
4. Remove the rubber cap (7).
5. Loosen the bolt (8).
6. Move the movable knife connecting plate (10) back and forth to adjust so that the distance from the ridge on the right side of the needle plate to the ridge on the movable knife (9) is 9.5 to 9.9 mm.
7. After tightening the bolt (8), check the above position once more.
8. Turn the pulley (1) by hand to move the needle bar to its lowest position.

9. Loosen the nut (11), tighten the set screw (12) until the collar (3) is touching the inside of the groove in the thread trimmer cam (4), and then turn it back in the counterclockwise direction by approximately 1/4 of a turn.

10. Tighten the nut (11), and then check that the collar (3) is not touching the inside of the groove in the thread trimmer cam (4). In addition, push the driving lever (5) by hand toward the thread trimmer cam until the collar (3) touches the groove of the thread trimmer cam (4), and then check that the driving lever (5) returns smoothly to its original position when it is released.

11. Check that there is a gap of about 0 - 1 mm between the outside of the hole in the movable knife (9) and the ridge line on the shuttle race thread guide (13) when there is still play between the parts.
11-10. Replacing the movable and fixed knives

1. Loosen the two bolts (1) and then remove the feed plate (2).
2. Open the shuttle race cover, remove the two screws (3) and the two flat screws (4), and then remove the needle plate (5).
3. Remove the movable knife (6) and the fixed knife (7).

4. Install the new fixed knife (7) in the position shown in the illustration.
5. Apply grease to the outside of the collar (8) and to the shoulder screw (9), and then install the new movable knife (6) together with the thrust washer (10) and the movable knife spacer (11).
6. Check that the movable knife (6) and fixed knife (7) cut the thread cleanly. Replace the movable knife spacer with accessory spacers (t=0.2, 0.3, 0.4) so that the knives trim the thread accurately.
   * If the knife pressure is too weak and the thread is not completely cut, use a thinner movable knife spacer.
   * If the knife pressure is too strong and the movable knife (1) turns stiffly, use a thicker movable knife spacer.
7. Apply grease to the pin (12), place it into the movable knife connecting plate (13), and install it to the needle plate (5).
8. Check that the needle is aligned with the center of the needle hole.
9. Install the feed plate (2). (Refer to the next page.)
11-10-1. Installing the feed plate

NOTE:
Install the feed plate so that the surface with the index mark is facing upward.

Place the rear edge of the feed plate (1) against the stepped part of base plate Y (2) (shaded section (A)) and use a 2 mm diameter pin (such as a needle) to align the hole in the feed plate (1) with the hole in base plate Y (2); then tighten the two bolts (3).

11-11. Adjusting the thread wiper

1. Loosen the two screws (3) and shift the entire solenoid setting plate (4) up or down to adjust so that the thread wiper (2) is 15 mm in front of the needle center when the plunger (1) of the thread wiper solenoid is driven to the full stroke.
2. Loosen the screw (5) and adjust the position of the thread wiper (2) so that the distance from the thread wiper to the tip of the needle is approximately 2 mm and the tip of the thread wiper (2) is approximately 3 mm from the center of the needle when the thread wiper (2) passes below the needle during operation.

NOTE:
Check that the thread wiper (2) does not touch the finger guard (6).
11-12. Presser foot installation position

Install the presser foot (1) with the screw (2) so that the distance from the bottom of the presser foot to the top of the needle plate is 22 mm when the sewing machine is stopped and the presser foot (1) is raised.

11-13. Changing the intermittent stroke

The intermittent stroke can be adjusted to within 2 – 10 mm by adjusting the position of the stepping clamp connecting rod and changing the installation position of stepping clamp link A.

<Changing the installation position of stepping clamp link A>

1. Remove the face plate.
2. Remove the two screws (1) and the two shoulder screws (2), and then remove stepping clamp link A (3).
3. Change the installation position for stepping clamp link A (3) to either A, B or C above.

If the position of the stepping clamp connecting rod is adjusted as described in the following at any one of the installation positions, the adjustment range for the intermittent stroke will as given in the following table. (Refer to the next page.)

<table>
<thead>
<tr>
<th>Installation position</th>
<th>Intermittent stroke range</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>2 – 4.5mm</td>
</tr>
<tr>
<td>B</td>
<td>4.5 – 10mm</td>
</tr>
<tr>
<td>C</td>
<td>0 mm (Presser foot does not move up and down)</td>
</tr>
</tbody>
</table>
11. STANDARD ADJUSTMENTS

<Stepping clamp connecting rod position adjustment>

1. Loosen the screw (1), and then open the cover (2).
2. Loosen the nut (3), and then adjust the position of the stepping clamp connecting rod (4).
   - When the stepping clamp connecting rod (4) is raised, the intermittent stroke will increase.
   - When the stepping clamp connecting rod (4) is lowered, the intermittent stroke will decrease.

Next, adjust the needle bar and presser foot timing.
3. Turn the machine pulley to raise the needle bar from the lowest position until the lowest reference line on the needle bar (reference line B) is aligned with the lower edge of the needle bar bush (5).
   (If using a DP x 5 needle, align with the second reference line from the top (reference line b).)
4. Open the top cover and loosen the two set screws (6).
5. Align the index marks on the stepping clamp cam (7) and the stepping clamp connecting rod (4), and then tighten the set screws (6).

Check the following after changing the intermittent stroke.

1. With the intermittent presser foot (1) lowered, turn the pulley to move the intermittent presser foot (1) to its lowest position.
2. Check that the presser foot (1) does not touch the needle plate and that the presser bar clamp (2) does not touch the presser bar bush (3).
   <If they are touching>
   Remove the motor cover (4).
   Loosen the nut (5), and turn the bolt (6) until it is pressing against the intermittent drive lever (7), and then adjust until the two points mentioned above are not touching.

BAS-342G
64
11-14. Adjusting the work clamp lift amount

The maximum lift amount for the work clamp (2) is 30 mm above the top of the needle plate.

1. Turn on the air, and then turn on the power switch.
2. Depress the work clamp switch (1) to raise the work clamp (2).
3. Loosen the two bolts (4) of the work clamp lifter lever (3), and then move the work clamp lifter lever (3) up or down to adjust the lift amount.

11-15. Adjusting the air pressure

Lift up the handle (2) of the regulator (1) and then turn it to adjust the air pressure to 0.5 MPa. After adjustment is complete, push the handle (2) downward to lock it.
12. TABLE OF ERROR CODES

DANGER

Wait at least 5 minutes after turning off the power switch and disconnecting the power cord from the wall outlet before opening the cover of the control box. Touching areas where high voltages are present can result in severe injury.

If a malfunction should occur with the sewing machine, a buzzer will sound and an error code will appear in the display window. Follow the remedy procedure to eliminate the cause of the problem.

</tbody>
</table>

If an error code that is not listed above appears or if carrying out the specified remedy does not solve the problem, contact the place of purchase.
13. TROUBLESHOOTING

- Please check the following points before calling for repairs or service.
- If the following remedies do not fix the problem, turn off the power switch and consult a qualified technician or the place of purchase.

⚠️ CAUTION

Turn off the power switch and disconnect the power cord before carrying out troubleshooting.
If the foot switch is depressed by mistake, the sewing machine might start operating and injury could result.

Items with a "*" in the “Reference” column should only be checked by a qualified technician.
