SOLUTIONS
& SERVICES
PORTFOLIO

Secure Function Lock is a built-in solution that offers control over who has access to a machine and what functions they are allowed to use. Page limits and printing restrictions help manage costs and allow setting permissions for users to print in color.

Secure Function Lock allows an administrator to restrict public access to specific functions and to define what features can be accessed by user or group. This solution works with the optional Secure Print+ feature to hold print jobs at the machine for secure job release.

Setting Lock allows an administrator to set a password to block unauthorized access to machine settings. Secure machine configuration helps prevent confidential information from falling into the wrong hands.

SECURE FUNCTION LOCK

Environments seeking secure workflows with easy card authentication and cost control.

Tracking &
Reporting

SETTING LOCK

Environments with security requirements that require restrictions on who can change machine settings.

Built-In
Solutions

Activity Reports

Receive activity reports based on users or groups when the Job Logging feature is enabled.

Cost Effective

Avoid the expense of management software, servers, and external card readers.

Authorize Access

Configure passwords for selected users to grant access to functions or to set page limits.

Secure Function Lock allows an administrator to restrict public access to specific functions and to define what features can be accessed by user or group.

Restricted Functions

"User List" settings need to be configured after "Restricted Functions". "Restricted Functions" enables you to manage the restrictions per user or group.

User List / Restricted Functions	Functions										Page Limits (*)		Page Counters		
	Print	Copy	Scan	Fax	USB	Web Connect	Apps	On	Max. Pages	Color Print	Total	BBW	Color	All Counter Reset
