

### May Flaum

The stamp material for the ScanNCut opens up an entirely new world of creative possibilities. From stamping a card to putting together a decorative gift bag - there is a fun world of creative possibility just waiting for you to play and explore. For today's project, I am playing with stars and sentiments. One of my favorite things about stamping with paint is being able to get some texture, in addition to the ease of being able to layer with additional designs.

#### MATERIALS:

ScanNCut; Deep Cut Blade; ScanNCut Stamp Material; Paint; Patterned Paper; Cardstock; Buttons and Sequins; Glitter Glue; Kraft Gift Bag

- step 1.** Place the stamp material onto your ScanNCut mat (leave plastic over the top) and load the mat into machine. Insert deep cut blade to machine at this time as well.

- step 2.** Select your design or word, and adjust the placement of the design on the screen as needed to fit where your stamp material is.

**step 3.** Repeat with any additional designs you desire to use.

**Tip:** Create some basic shapes while you've got the deep cut blade and stamp material out, so that you can have stamps that are useful on tons of projects!

**step 4.** Stamp designs onto the bag, and allow time for each stamp to dry before overlapping, unless a blended color is desired.

**step 5.** For more dimension, get out your ScanNCut and cut additional stars and shapes. Use the "Background Scan" function if using scraps of paper.

**step 6.** Add the stars, trim, and finish with buttons and sequins to complete this project.

**Tip:** Save these stamps and create cards, tags, and other holiday décor! The stamps are reusable and easy to store.
