Please read this manual before using the machine.
Please keep this manual within easy reach for quick reference.

NINE NEEDLE SIX HEAD ELECTRONIC EMBROIDERY MACHINE
TWELVE NEEDLE SIX HEAD ELECTRONIC EMBROIDERY MACHINE
Precautions

• Unauthorized commercial or industrial use of trademarks or copyrighted materials (such as paintings, drawings, photos, logos, etc.) owned by other companies or persons is illegal. The use of such materials without the permission of their owners may result in criminal or civil liability.

• This manual may be subsequently modified without prior notice.

• Brother Industries, Ltd. shall assume no responsibility for any consequences of using this manual.
Thank you very much for buying a BROTHER sewing machine. Before using your new machine, please read the safety instructions below and the explanations given in the instruction manual.

With industrial sewing machines, it is normal to carry out work while positioned directly in front of moving parts such as the needle and thread take-up lever, and consequently there is always a danger of injury that can be caused by these parts. Follow the instructions from training personnel and instructors regarding safe and correct operation before operating the machine so that you will know how to use it correctly.

---

**SAFETY INSTRUCTIONS**

1 Safety indications and their meanings

This instruction manual and the indications and symbols that are used on the machine itself are provided in order to ensure safe operation of this machine and to prevent accidents and injury to yourself or other people. The meanings of these indications and symbols are given below.

### Indications

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="triangle" alt="DANGER" /></td>
<td>The instructions which follow this term indicate situations where failure to follow the instructions will almost certainly result in death or severe injury.</td>
</tr>
<tr>
<td><img src="triangle" alt="CAUTION" /></td>
<td>The instructions which follow this term indicate situations where failure to follow the instructions could cause injury when using the machine or physical damage to equipment and surroundings.</td>
</tr>
</tbody>
</table>

### Symbols

- ![CAUTION](triangle) This symbol (△) indicates something that you should be careful of. The picture inside the triangle indicates the nature of the caution that must be taken. (For example, the symbol at left means "beware of injury").

- ![CAUTION](triangle) This symbol (🚫) indicates something that you must not do.

- ![CAUTION](triangle) This symbol (●) indicates something that you must do. The picture inside the circle indicates the nature of the thing that must be done. (For example, the symbol at left means "you must make the ground connection").
## 2 Notes on safety

### DANGER

- Wait at least 5 minutes after turning off the power switch and disconnecting the power cord from the wall outlet before opening the face plate of the control box. Touching areas where high voltages are present can result in severe injury.

### CAUTION

#### Installation

- Machine installation should only be carried out by a qualified technician.
- Contact your Brother dealer or a qualified electrician for any electrical work that may need to be done.
- The sewing machine weighs more than 720 kg. The installation should be carried out by four or more people.
- Do not connect the power cord until installation is complete, otherwise the machine may operate if the start switch is pressed by mistake, which could result in injury.
- Be sure to connect the ground. If the ground connection is not secure, you run the risk of receiving a serious electric shock.
- When securing the cords, do not bend the cords excessively or fasten them too hard with staples, otherwise there is the danger that fire or electric shocks could occur.

#### Sewing

- This sewing machine should only be used by operators who have received the necessary training in safe use beforehand.
- The sewing machine should not be used for any applications other than sewing.
- Turn off the power switch at the following times, otherwise the machine may operate if the start switch is pressed by mistake, which could result in injury.
  - When threading the needle
  - When replacing the bobbin and needle
  - When not using the machine and when leaving the machine unattended
- Do not get on the table. Table may be damaged.

- Attach all safety devices before using the sewing machine. If the machine is used without these devices attached, injury may result.
- Do not touch any of the moving parts or press any objects against the machine while sewing, as this may result in personal injury or damage to the machine.
- Do not touch the pulse motor and sewing machine bed section during operation or for 30 minutes after operation. Otherwise burns may result.
- If an error occurs in machine operation, or if abnormal noises or smells are noticed, immediately turn off the power switch. Then contact your nearest Brother dealer or a qualified technician.
- If the machine develops a problem, contact your nearest Brother dealer or a qualified technician.
**CAUTION**

### Cleaning

- Be sure to wear protective goggles and gloves when handling the lubricating oil or grease, so that no oil or grease gets into your eyes or onto your skin, otherwise inflammation can result. Furthermore, do not drink the oil or grease under any circumstances, as they can cause vomiting and diarrhea. Keep the oil out of the reach of children.

### Maintenance and inspection

- Turn off the power switch before starting any cleaning work, otherwise the machine may operate if the start switch is pressed by mistake, which could result in injury.
- If the power switch needs to be left on when carrying out some adjustment, be extremely careful to observe all safety precautions.
- Use only the proper replacement parts as specified by Brother.
- If any safety devices have been removed, be absolutely sure to re-install them to their original positions and check that they operate correctly before using the machine.
- Any problems in machine operation which result from unauthorized modifications to the machine will not be covered by the warranty.

- Maintenance and inspection of the sewing machine should only be carried out by a qualified technician.
- Ask your Brother dealer or a qualified electrician to carry out any maintenance and inspection of the electrical system.
- Turn off the power switch and disconnect the power cord from the wall outlet at the following times, otherwise the machine may operate if the treadle is depressed by mistake, which could result in injury.
  - When carrying out inspection, adjustment and maintenance
  - When replacing consumable parts such as the rotary hook and knife.
3 Warning labels

* The following warning labels appear on the sewing machine.
 Please follow the instructions on the labels at all times when using the machine. If the labels have been removed or are difficult to read, please contact your nearest Brother dealer.

1 Safety devices: Finger guard, Belt cover, etc.

2

3

4 Never touch or push the thread take up during operation as it may result in injuries machine.

5 Never touch or push the needle bar during operation as it may result in injuries or damage to the sewing machine.

6 Direction of operation

7 Do not touch this part during activation or for 30 minutes after shut-off. Otherwise burns may result.
Before Starting Operation

- Do not force open the shutter for direct contact with the magnetic area.
- Do not bring disks near magnetic matters such as magnetic screwdriver.

- Do not store floppy disks in an extremely high or low ambient temperature.
- Do not use floppy disks under high humidity.

- Do not use or store floppy disks in a dusty place.
- Do not store floppy disks under direct sunlight.

- Do not bend the disk. Do not put things on the disk.
- Avoid contact with solvent or drink.

- Do not remove the disk out of the drive during the access lamp is lit.
Protecting data in floppy disks

Write-protection is available for a floppy disk to prevent undesired data deletion. A write-protected disk is read-only. It is recommended to provide write-protection for disks which contain important data. To do so, slide the write-protect notch to open the slot as shown below.
Explanation of models

This manual explains two models:
- BES-961BC (9 needles)
- BES-1261BC (12 needles)

Explanation for individual model is provided by identifying the model name. Check the model before using the machine. The display is BES-961BC.

Configuration of this manual

This manual consists of the following chapters:

Chapter 1 Preparation of Embroidery Machine
This Chapter describes the specifications, installation and preparatory procedures of starting up the machine.

Chapter 2 Embroidering Procedures
Provides explanations on the operation panel and briefly reviews the flow of embroidering processes.

Chapter 3 Selection of Data and Embroidering
This Chapter describes procedures of reading sewing data and sewing.

Chapter 4 Editing of Embroidering Data
Explains how to edit the embroidery data.

Chapter 5 Setting
This Chapter describes procedures of setting the machine and working environment.

Chapter 6 Operation of Machine
Provides information on machine operation during embroidering.

Chapter 7 Maintenance
Describes appropriate maintenance of the machine.

Chapter 8 Standard Adjustment
Explains how to adjust the needles.
Chapter 9  List of Error Messages
  Provides information on error codes and action to be taken.

Chapter 10  Troubleshooting
  Provides troubleshooting for the machine.

Connection and Installation of Optional Equipment
  Describes connections between the machine/computer and optional equipment available.

3. Installation

<table>
<thead>
<tr>
<th>DANGER</th>
</tr>
</thead>
<tbody>
<tr>
<td>🚫 Embroidery machines should be installed only by trained engineers.</td>
</tr>
<tr>
<td>⚠️ Electric wiring should be laid by your distributor or electric experts.</td>
</tr>
<tr>
<td>🚫 A machine weighs more than 720 kg. Installation should be carried out by 4 or more workers.</td>
</tr>
<tr>
<td>🚫 Do not connect the power source until installation is completed. Doing so may start the machine unintentionally through an accidental activation of the START switch, resulting in bodily injuries.</td>
</tr>
<tr>
<td>⚠️ Install a machine in a place away from a high-frequency welding machine or other machines that may generate a strong electric noise. Failure to do so may cause the embroidery machine to malfunction.</td>
</tr>
<tr>
<td>⚠️ Establish grounding as designated. Improper grounding may result in an electric shock.</td>
</tr>
</tbody>
</table>

* After installation is completed, get the power supply from a dedicated outlet.
* When connecting multiple machines, exercise care not to exceed the capacity of the outlet.

3-1 Transportation of Machine

When relocating the machine, push the steel frame.

Note) Never push the cover or carriage.

- When using a fork lift

Open the forks of the lift approximately 10 cm to the right from the even position to the center pillar viewed from the rear of the machine, and pass them under the legs to lift the machine.
When using a crane

Place two rectangular bars on the four L-shaped steels on the bottom of the machine steel frame. Loop four ropes around the bars and lift the machine.

Note) When lifting the machine, make sure that the ropes do not contact the machine table or the tension plate.
3-2 Installation of Machine

1. Place the attached cushion sheets 2 and leveling plates 3 under the four level adjusters 1. The leveling plates 3 should be placed above the cushion sheets respectively.

2. Secure the four level adjusters 1 on the ground using the nuts 4 so that the machine will be stable.

Note) If the floor is not strong enough, the embroidery machine may be rocked during operation. In such a case, it is recommended that a secure base of concrete be placed below the embroidery machine.
3-3 Preparation of Needle Bar Case

1. Loosen the bolt 1, and move the needle case 2 to the left.

2. Press the change bracket collar 4 against the change case base 3 on the light, while pressing the change bracket collar 5 against the change case base 6 on the left, and tighten the bolt 1. Check that needles at needle bar No.1 and 9 are inserted into the needle plate holes smoothly.

Note)  • Check that the connecting shaft 7 does not have backlash in the horizontal direction.
  • If the bolt 1 of the change bracket collar on the right is loosened, it may be dislocated during adjustment of the needle bar case 2. Do not loosen this bolt.
1. Remove 3 pieces of fixing screw 1, loosen 2 pieces of screw 2 and remove the color change cover 3.

2. Remove the bolts 4 and detach the fixing bracket for transportation from the bridge and the connecting shaft.

3. Loosen the bolts 5 and move the needle bar case 6 left side.

4. Press the change bracket collar 8 against the change case base 7, while pressing the left side change bracket collar 9 against the change case base 7, and tighten the bolts 5. Check that needle bar No.1 and 12 are inserted into the needle plate holes smoothly.

(Notes) • Check that there is no play for the connecting shaft in the horizontal direction.

• If the bolt of the right side change bracket collar 8 is loosened, the change bracket collar 9 may be dislocated and adjusting position of the needle bar case 6 will be required. So don’t loosen this bolt.

5. Attach the color change cover 3 by 3 pieces of fixing screw 1 and 2 pieces of fixing screw 2.
3-4 Mounting of Table

Mounting of F table

1. Tentatively mount the F table guides U and L on both sides of the legs using two bolts each.

2. Tentatively mount there F table supports F on the leg front using two bolts each.

3. Tentatively mount five F table stoppers on the rear legs using two bolts each.

Note) • The steps 1 and 3 are required only when the F table set is purchased separately from the machine.
• The F table is a standard attachment.
4. Mount four thumb bolts ③ each on the rear of F table R ⑤, M (2 pcs.) ⑥, and L ⑦.

5. Mount five thumb bolts on the steel pipe below the front leg.

6. Insert the pins attached to the rear of the F table R ⑤, M (2 pcs.) ⑥, and L ⑦ into the cover ③ on the leg. Adjust the height of the F table guide U ① and the F table support F ③ so that the table top surface will become 1 mm lower than the bed top surface. After adjustment is finished, tighten each bolt securely.
7. Dismount the F table R ⑤, M (2 pcs.) ⑥, and L ⑦ once, and lower the F table support F ③. Then, place the F table R ⑤, M (2 pcs.) ⑥, and L ⑦ on the F table guide L ② bending section. Fix the F table support F ③ at this height and insert the pins on the rear of the F table R ⑤, M (2 pcs.) ⑥, and L ⑦ into the holes of the F table stopper ④. Note) Fix the F table stopper and the F table guide L securely at this position.

8. Insert the F table R ⑤, M (2 pcs.) ⑥, and L ⑦ into the upper and lower positions respectively, then check if the table can be securely fixed by the thumb bolts ⑧. If not, shift the F table support F ③ to the right and left for further adjustment.
9. Fix the legs and the table using the F table stays A (3 pcs.) \( \text{\textcircled{3}} \) and B (2 pcs.) \( \text{\textcircled{10}} \) while the F table R \( \text{\textcircled{5}} \), M (2 pcs.) \( \text{\textcircled{6}} \), and L \( \text{\textcircled{7}} \) are fixed at the upper position.

* Dismounting can be carried out in the reverse procedures.

Note)
- Use two F table stays (B) with one notch at both ends of the F table R \( \text{\textcircled{5}} \) and L \( \text{\textcircled{7}} \).
- When mounting the F table stays A (3 pcs.) \( \text{\textcircled{3}} \) and B (2 pcs.) \( \text{\textcircled{10}} \), fit the F table stay notch into the table, then fix the notch to the legs using the thumb bolts. Dismounting can be carried out in the reverse procedures.
- When the F table is at the lower position, the F table stays A and B need not be used.
3-5 Mounting of Cotton Stand

BES-961BC

1. Attach four thread guide support bars ② to the cotton stand assembly ①, while fitting into the four holes.

2. Mount the thread guide assembly ③ on the thread guide support bars ② using the four screws ④.

Note) • When mounting, use one flat washer ⑤ below the thread guide support bar ②.
• Pay careful attention to the front and back directions of the thread guides (A, B, C).
1. Attach four thread guide support bars ② to the cotton stand assembly ①, while fitting into the four holes.

2. Mount the thread guide assembly ③ on the thread guide support bars ② using the four screws ④.

Note:
- When mounting, use one flat washer ⑤ below the thread guide support bar ②.
- Pay careful attention to the front and back directions of the thread guides (A, B, C).
3-6 Lubrication to Needle Bar Case

Proper lubrication is necessary for keeping the machine head in good condition.

**CAUTION**

- Turn off the power switch before starting any cleaning work, otherwise the machine may operate if the start switch is pressed by mistake, which could result in injury.

Before operating the machine for the first time after unpacking or after leaving the machine without operation for a long period of time, supply one or two drops of oil to two sections of the needle bar. (See the left figure.)

Note:
- Use the Brother’s specified embroidery machine oil (Nisseki Embroidery Lube No. 10 or the equivalent).
- Supplying an excessive amount of oil will cause dripping onto the material.
3-7 Grounding

Note) • When connecting the power supply, make sure to connect it to the grounding cable (with green and yellow stripes).
• When plugging in the outlet, use a plug suited to the outlet.
4. Preparation for Embroidering

CAUTION

- Turn off the power switch before starting preparation.
- Failure to do so may start the machine unintentionally through an accidental activation of the START switch, resulting in bodily injuries.

4-1 Upper Threading

- BES-961BC

1. Pass the upper thread from the cotton stand through the hole of the thread guide right above each cotton stand bar from the lower side.

2. Pass the thread through the upper hole of the pretension. Push up the tension disc with your finger, and place the thread under the disc. Then, pass it through the lower hole.

3. Pass the thread through the upper hole of the 2nd pretension. Push up the tension disc with your finger, and place the thread under the disc. Then, pass it through the lower hole, and wind it around the thread breakage pulley twice.
4. Pass the thread through the hole of the upper thread guide (U), wind it into the tension disk clockwise once, and place it on the spring.

5. Pass the thread through each hole of the upper thread guide (U) and the thread guide (C).

6. After passing the thread through the hole of the thread guide (U), insert the thread into the right side of the inner thread guide, and pass it through the hole of the thread take-up.

7. Bring the thread to the inner thread guide again to insert it into the hole from the upper section, then into the lower thread guide.

8. Pass the thread through the hole of the needle bar thread guide, then pass it through the needle eye, without passing it through the presser foot.

**BES-1260BC**

1. Pass the upper thread from the cotton stand through the hole of the thread guide right above each cotton stand bar from the lower side.

2. Pass the thread through the upper hole of the pretension. Push up the tension disc with your finger, and place the thread under the disc. Then, pass it through the lower hole.
3. Pass the thread through the upper hole of the 2nd pretension. Push up the tension disc with your finger, and place the thread under the disc. Then, pass it through the lower hole, and wind it around the thread breakage pulley twice.

4. Pass the thread through the hole of the upper thread guide (U), wind it into the tension disk clockwise once, and place it on the spring.

5. Pass the thread through each hole of the upper thread guide (U) and the thread guide (C).

6. After passing the thread through the hole of the thread guide (U), insert the thread into the right side of the inner thread guide, and pass it through the hole of the thread take-up.

7. Bring the thread to the inner thread guide again to insert it into the hole from the upper section, then into the lower thread guide.

8. Pass the thread through the hole of the needle bar thread guide, then pass it through the needle eye, without passing it through the presser foot.
4-2 Replacement of Bobbin

Note) Remove dust, lint and oil from the bobbin case before replacement.

■ Removing bobbin case

1. Open the rotary hook cover B ①.
2. Hold the knob ② and take out the bobbin case.
3. Close the knob and take out the bobbin ③.

■ Replacing bobbin

1. Put a new bobbin in the bobbin case.
2. Slide the thread under the tension spring ⑤ through the notch ④.
3. Pull out the thread from the hole of the tension spring ⑤.
4. Pull out the thread by about 50 mm.

■ Attaching bobbin case

1. Hold the knob ② and attach the bobbin case securely.
2. Close the rotary hook cover B ①.
4-3 Replacing and Selecting Needle

- Removing needle
  Loosen the set screw ① and remove the needle ①.

- Attaching needle
  With the flat side facing the front, insert the needle all the way until it meets the end of the needle bar. Tighten the set screw ① firmly.
  
  Note) • Set the needle so that the notched part will come on the rotary hook side.
  • The needle should not be angled to the left (when viewed from the front).

- Selecting needle
  • When using special threads such as gold, silver, and rame yarn, use a heavy-duty needle (#11 ~ #16). For better finish, paste the waxed paper on the back of the material.
  • In general, use DBxK5 #11 ~ #18 according to the material thickness. For knitted materials, use DBxK23 #11 because its rounded point prevents the knit thread from breaking.

* Relationship between materials and needles

<table>
<thead>
<tr>

<tr>
<td>Shirt</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Towel</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
4-4 Attachment of Embroidery Hoop and Frame

**Tubular square hoop**

1. Insert the fixing pins of the tubular round arms R ① and L ② into the notches of the X-axis feed frame ③. Slide the arm to the right and left and lower the fixing lever ④ to fix them.

2. Set the right and left fixtures of the tubular square hoop ⑤ while sliding them under the flat spring ⑥ upward. Then fit the frame projecting part ⑦ into the hole of the tubular square hoop ⑤ securely.
• By changing the tubular round arm mounting width, various sizes can be set.

Note) Change the width, referring to the pin position.

Note) If two pins cannot be inserted properly, remove one of them.
■ Holder base (optional)

<table>
<thead>
<tr>
<th>Diagram</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Diagram Image]</td>
</tr>
</tbody>
</table>

**Attaching the holder base frame**

1. Set the table. (Refer to "3-4 Mounting of Table" (Page 26) for details.)

2. Mount the frame connecting plate R 2 on the X-axis feed frame 1, using six bolts, washers, and nuts.

3. Insert the frame connecting plate 3 into the holder base frame L 3, holder base frame C 4, and holder base frame R 5, using bolts and washers.

4. From the front, put the holder base frame C assembly 6 under the frame connecting plate R 2 and fix it using four bolts.

5. Check that the clearance between the table and the mounted holder base frame C assembly 6 is even when viewed from the machine front.

   **[Adjustment]** Loosen three bolts of the F table support F 8 and move it in the direction of the arrow for adjustment.
6. Check that the clearance between the Y-axis cover 7 and the mounted holder base frames L 3 and R 5 is even when viewed from the right and left sides.

   [Adjustment] Loosen the right and left bolts of the F table guide U 6 and move it in the direction of arrow for adjustment.

7. Tighten each bolt securely after adjustment is finished.

**Attaching the holder base**

1. Mount the holder base mounting frame 3 on the X-axis feed frame 1 and holder base frame C 2, using three clamp screws.

2. When the mounting pitch of the holder base is 370 mm, mount the holder base horizontally to the holder base mounting frames 3 using the thumb bolts 4.
3. When the mounting pitch of the holder base is 550 mm, mount the holder base vertically to the X-axis feed frame ① and holder base frame C ② using the thumb bolts ④.
Sash frame (optional)

Attaching the sash frame

1. Set the table. (Refer to "3-4 Mounting of Table" (Page 26) for details.)

2. Mount two vertical sash frames 1 on the holder base frames L and R, and two horizontal sash frames 2 on the X-axis feed frame 3 and the holder base frame C 4, using the screws.

3. Set the material. Then, set 16 clips 290 5 horizontally in two sides and 4 clips 220 6 vertically on the right and left sides.
4-5 Bed Retract

When embroidery within the maximum area by mounting the tubular square hoop, there is a possibility that the hoop interferes with the bed. Retract the bed of several machine heads to avoid interference. Machine heads with an even number enter a halt status.

Note) The machine heads are numbered 1 ~ 6 from the right side.

1. Loosen two bolts ② that secure the bed support ①, and move the bolts ② to the right and left.

   Note) • The bed is secured by two bolts and supported at three places.
   • When loosening the bolts, support the bed by hand.

2. Lower the machine bed ③ slowly until it comes into contact with the leg.

3. Tighten the bolts ② again.
4. Set the needle bar case at the needle bar No. 1. Remove the presser foot 4 from the retracted machine bed.
   
   Note)  
   • The head of the retracted bed is stopped.  
   • When removing the presser foot, align the pulley indication mark ▲ first.  
   • To operate the machine in retract position, set the bed in contact with the legs.

## Resetting of bed retract

1. Move the machine bed ③ little by little until it comes into contact with the bed support ①.

2. Loosen two bolts ② and insert the bed into the right and left directions, then tighten the bolts securely again.

3. Mount the presser foot for the reset bed ③.  
   (Refer to "Chapter 8. Standard Adjustment" for mounting the presser foot.)
4-6 Adjustment of Thread Tension

- **Adjustment of upper thread**
  Adjust upper thread tension to 0.7~1.3N (70~130 gf) when the thread is pulled at the needle bar thread guide.

- **Correct adjustment**
  Turn the upper thread tension dial so that the needle thread can be pulled to the back of the material and that the lower stitch width will be about 1/3 of the upper stitch width.

- **Adjustment of tension spring**

  1. The tension spring should be adjusted to 6~8 mm in height and 0.07~0.12 N (7~12 gf) in force.
2. For adjusting the height, loosen the screw ① and turn the tension spring bracket ②.

3. For adjusting the tension spring force, insert a driver tip in the groove of the thread tension bar ③ and turn it.

---

**Lower thread tension**

The standard tension of the lower thread is 0.15~0.3N (15~30gf). This tension may vary depending on the used thread. In general, press the bobbin case to a smooth vertical surface and hang the designated number of coins. Turn the thread tension screw so that the lower thread will come out smoothly.
Chapter 2
Embroidering Procedures

After installation of machine start embroidering. This chapter explains about the operation panel on the machine as well as precautions for the actual embroidering process.
Functions of Operation Panel

**Operation Panel**

- **START**
  - Starts embroidering.
  - Restarts after moving the carriage to embroidering start position by using the jog switch.
  - Restarts embroidering after a suspension.

- **STOP**
  - Cancels errors during embroidering.
  - Suspends embroidering.

- **Selects sewing data. (→ "Chapter 3 Selection of Data and Embroidering" page 59)**

- **Specifies a sequence of colors (sequence of needle changes) in sewing data. (→ "Setting of Needle Bars" page 92)**
Edits sewing data. (→ “Chapter 4 Editing of Embroidering Data” page 77)

Sets the upper thread breakage sensor. (→ “Thread Breakage Sensor” page 93)

Machine motions can be set. (→ “Chapter 5 Setting” page 89)

Trims thread during suspension.

Moves the hoop to a preset hoop retract position. When this switch is pressed again, the hoop returns to the previous position.

Checks the embroidering area.

Moves the hoop automatically into the embroidering area when the embroidery position is out of the area.

Used for selecting data and setting functions.
Chapter 2  Embroidering Procedures

Selects the flat or cap hoop. This selection should be done before turning the power ON to the machine. Selection after turning the power ON may damage the hoop.

Moves the hoop.

Step-back or forward is available during suspension, by one stitch every time the switch is pressed (Use switches only.)

Changes the speed range during embroidering (Use switches only).

Carries out inching of the hoop when the switch is pressed in the inching mode

Move the cursor for selecting sewing data and an icon.

Moves the needle bar. The needle moves by the diameter every time this switch is pressed.

Change to the screen for selecting sewing data.

Operation panel

Contrast volume
Adjusts the screen contrast.

SBUS interface connector
Not used (Do not connects anything.)

RS-232C interface connector
Connect personal computer with BE-100 installed, etc.
Switches at Machine Heads

BES-961BC

Start button

Emergency stop button

BES-1261BC

Start button

- Emergency stop button
  Stops embroidering operation. "Emergency stopping" is displayed on the screen as soon as the machine stops.
  Refer to "Resetting Emergency Stop" (→ page 119) to stop flashing.

- Start button
  Starts embroidering. Holding down this button executes embroidering at a low speed.
  When resuming embroidering after an emergency stop, release emergency stop before pressing this button. Refer to "Resetting Emergency Stop" (→ page 119) for details.

Switches on Tension Plate

- THREAD SENSOR lamp
- HEAD switch
- MENDING lamp
- MENDING switch
- STEP BACK/FWD switch
■ THREAD SENSOR lamp
When red light is on, thread breakage sensor is functioning. When the light is off, the sensor is not effective. When the embroidery machine stops due to thread breakage, the lamp flashes.

■ HEAD switch
When it is set to ON, needle bar on the head moves for embroidering. When it is set to OFF, the needle bar does not move for embroidering.

■ MENDING lamp
This lamp lights up when the embroidery machine is in the mending mode. A lamp on the head with an error lights up. (only when the error can be located)

■ MENDING switch
This switch is set to upside to drive or to suspend the machine head during embroidering for a designated period of time.

■ STEP BACK/FWD switch
When it is turned to BACK, the machine steps back. When it is turned to FWD, the machine steps forward. If you keep the switch turned for a while, the machine will continue stepping even after you let the switch alone. When it is turned to the opposite side, the machine stops.
During timing adjustment of the rotary hook in the test mode, the rotary hook slightly rotates to the left/right when this switch is turned to left/right respectively. Refer to "Adjustment of timing Between Needle and Rotary Hook" (→ page 144) for further details.
If any error occurs, it can be reset.
Flowchart of Preparation for Embroidering

- Turn on the machine power. (→ page 56).
- Retrieve the embroidery data (→ page 57).
  - "Chapter 3 Selection of Data and Embroidering" (→ page 59)
  - Edit the retrieved embroidery data.
    "Chapter 4 Editing of Embroidering Data" (→ page 77)
- Press 🔊 on the operation panel.
- Press 🎤 on the operation panel.
**Turn on the Machine Power**

1. Turn on the power to the machine.

2. A message is displayed on the LCD as soon as the power is turned ON.

3. The alarm sounds three times. The needle bar and the presser foot move up. The hoop moves back to the zero point and the sewing screen is displayed.
Retrieve the Embroidery Data

The description in this section is based on the method of reading data which is registered in the memory unit of the machine. Refer to "Selection of Data" (→ Page 61) for details.

1. Press \[\text{switch}\].
   Data saved in the machine is displayed.

2. Select a screen by pressing \[\leftarrow\rightarrow\] keys, and select required data by pressing ten keys or \[\leftarrow\rightarrow\triangle\downarrow\].
   When using ten keys for data selection, input a numerical figure (1 ~ 9) which indicates each data name. Required embroidery data is selected and read.

3. Press \[\text{key}\].
   Required embroidery data is selected and read.

Start Embroidering

1. Press \[\text{to check the embroidering area.}\]

2. Press \[\text{to start embroidering.}\]
   Sewing is started and the next screen is displayed.
Chapter 3
Selection of Data and Embroidering

This Chapter describes how to select embroidery data in order to start embroidering.
Chapter 3 Selection of Data and Embroidering

What Can the Machine Do?

### Selection of Embroidery Data

- Registration of data from the floppy disk (→ Page 61)
- Reading of data from the memory (→ Page 64)
- Registration of data created by BE-100 (→ Page 65)
  (These icons are displayed in the lower right of the screen.)
- Modification of data name (→ Page 68)
- Deletion of embroidery data (→ Page 66)

### Embroidering Operation

- Embroidering start (→ Page 72)
- Embroidering feedhold (→ Page 73)
- Embroidering cancel (→ Page 73)
- Step forward/step back (→ Page 74)
  - Step forward (back) stitch by stitch
  - Step forward (back) by every 10 stitches
  - Step forward (back) by every 100 stitches
  - Step forward (back) until a next color change
  - Step forward (back) to the embroidering start point of a next pattern
  - Step forward (back) by a specified number of stitches (→ Page 74)
Selection of Data

Select data in order to start sewing.

- Data to use for actual embroidering is selected from data registered in the machine memory. A maximum of 45 kinds or 480,000 stitches of embroidery data can be registered in the machine memory; however, depending on the combination of embroidery data, the number of total stitches available may become less.

- When using data in a floppy disk or in BE-100, register it in the machine memory once before selection. If there is no space in the machine memory, delete unnecessary data to make a space.

Registration of Embroidery Data from Floppy Disk

Register embroidery data from a floppy disk into the machine memory.

- Types of data to be registered are as shown below.
  - DOS-formatted data

<table>
<thead>
<tr>
<th>Data format</th>
<th>Extension</th>
<th>Icon</th>
</tr>
</thead>
</table>
| ECS                 | Data with a name of [xxxx.ECS] | ![
| Tajima              | Data with a name of [xxxx.DST] | ![icon1] |
| Barudan             | Data with a name of [xxxx.DSB] | ![icon2] |
| Zanks (DSK)         | Data with a name of [xxxx.DSZ] | ![icon3] |
| Data received from BE-100 | Data with a name of [xxxx.STH] | ![icon4] |

(These icons are displayed in the lower right of the screen.)
• Other data

<table>
<thead>
<tr>
<th>Data format</th>
<th>Icon</th>
</tr>
</thead>
<tbody>
<tr>
<td>Barudan FDR</td>
<td><img src="FDR" alt="Icon" /></td>
</tr>
<tr>
<td>Barudan FMC</td>
<td><img src="FMC" alt="Icon" /></td>
</tr>
</tbody>
</table>

(These icons are displayed in the lower right of the screen.)

Loading and Loading of Floppy Disk

1. When loading a floppy disk, set it straight with the labeled surface facing this side.

2. When unloading a floppy disk, press the eject switch.

3. When it comes out, pull it straight.
   When the access lamp is ON, never press the eject switch. Otherwise, embroidery data in the floppy disk may be destroyed.

Registration of Sewing Data into Machine Memory

1. Load a floppy disk with sewing data.
Chapter 3 Selection of Data and Embroidering

2. Press ✈️ .

3. Select a screen for data registration by pressing ⏯️ .

4. Select an area for registration, using ten keys or ▲▼◆ , then press ◆

5. Data in the floppy disk is displayed. Press ⏯️ to select a screen.

6. Select data to register by pressing ten keys or ▲▼◆ then press ◆.

Data is newly registered in the machine memory.

Select embroidery data and press ✂. The selected data is automatically registered in the memory and the machine enters a standby status.

If registration is done without loading a floppy disk, the following screen is displayed after the step 4 is finished.

Load a floppy disk for data registration.
Reading from Memory

Data to use for sewing can be selected from the machine memory.

- A maximum 45 kinds or 480,000 stitches of embroidery data can be registered in the memory.

1. Press \[ \text{ } \].
   Embroidery data registered in the memory is displayed.

2. Select a screen by pressing \[ \text{ } \].

3. Select embroidery data to read by pressing ten keys or \[ \text{ } \].

4. Press \[ \text{ } \].
   Embroidery data is selected and read.

When a free space is specified in the memory, a screen for reading data from the floppy disk is displayed.
Refer to "Registration of Sewing Data into Machine Memory" (steps 5 and afterward on Page 63).

5. The initial screen is displayed.
Registration of Embroidery Data from BE-100

Connect the operation panel and the personal computer with BE-100 installed in order to register the embroidery data into the machine memory.

1. Connect the personal computer with BE-100 installed and the operation panel by means of the RS-232C cable.

2. Press the \[\text{button}\].

3. Select the data registration screen by pressing the \[\text{button}\].

4. Select an area for data registration by pressing ten keys or \(\triangle\up\down\rightarrow\leftarrow\), and then press the \[\text{key}\].

5. Press the \[\text{button}\].

When a floppy disk is set

Insert \[\text{disk}\], and press \[\text{or}\] \[\text{button}\] (\[\text{=Top page}\] \[\text{=Last page}\])

When no floppy disk is set
6. Press the ◄►.

   Make sure that communication is available, and press ◄ or ►
   (◄=Too page ►=Last page)

   ◄►

   Communication

   ◄►

7. The BE-100 embroidery data is displayed. Press the ◄► and select a required screen.

   ~DGG EBRORER EFISHR 2
   3 4 5 6 7 8 9
   1
   1 2 3 4 5 6 7
   123456789
  ◄►

8. Select embroidery data to register by pressing ten keys or △▼◄►, and then press the ◄key.

   The data is registered in the machine memory.

   ~DGG EBRORER EFISHR 2
   3 4 5 6 7 8 9
   1
   1 2 3 4 5 6 7
   123456789
  ◄►

Deletion of Embroidery Data from Machine Memory

Embroidery data can be deleted from the machine memory.

1. Press ◄◄.  

   A list of registered data is displayed.

2. Select a screen by pressing ◄►.

   Currently displayed screen
   No. of screens to be selected

3. Select embroidery data to delete by pressing ten keys or △▼◄►.
4. Press \texttt{DEL}.

Selected embroidery data is deleted from the memory.

When deleting embroidery data in the machine memory entirely:

When deleting embroidery data registered in the machine memory entirely, turn ON the power to the machine while pressing \texttt{DEL}.
Modification of Embroidery Data Name

Name of embroidery data registered in the machine memory can be modified.

This example shows how to modify the data name "FLOWER" to "TEST003".

- A maximum number of characters to use for an embroidery data name is 8.
- The following kinds of characters can be used.
- It is impossible to input a " . " or space.

<table>
<thead>
<tr>
<th>Alphabetical characters (A ~ Z)</th>
<th>Numerical characters (0 ~ 9)</th>

</tbody>
</table>

1. Press .
Embroidery data saved in the memory is displayed.

2. A list of embroidery data is displayed. Select a screen by pressing .

3. Select embroidery data to modify the name by pressing ten keys or .

4. Press .
When selected data has a pattern name, the name is displayed. Press the 数字 key once again.

5. Input a new data name by pressing ten keys.

When modifying embroidery data names entirely

6. Pressing DEL deletes currently reversed characters.

7. Press 8 twice.

8. Press 3 three times.

9. Press 7 five times.

11. Press 0 once.
12. Press \[\uparrow\].
When inputting the same character continuously, press the \[\uparrow\] to move the cursor to the right.

13. Press \[0\] once.
"0" is input.

14. Press \[3\] once.
"3" is input.

15. After inputting a data name, press \[\leftarrow\].
A data name is modified by the above procedures.

When modifying only one character:

[FLNWER] can be modified to [FLOWER] in the following procedures.

6. Press \[\downarrow\].

7. Press \[\uparrow\] twice and display "N" reversely.

8. Press \[\text{DEL}\].
"N" is deleted.
9. Press \( \text{6} \) four times.

"O" is input.

A data name is modified by the above procedures.

10. Press \( \text{7} \).

A data name is modified by the above procedures.
Sewing Operation

Before Starting Sewing

Select a hoop to set on the machine.

The following operation should be done before turning the power ON to the machine. Otherwise, it will damage the hoop.

1. Select either the flat hoop or cap hoop, using FLAT or CAP switch on the operation panel.
   When a flat or tabular hoop, or a sash frame is set on the machine, select [FLAT].
   When a cap hoop is set, select [CAP].

2. Specify an embroidery hoop set on the machine, referring to "Embroidery Hoop" (→ Page 96).

Starting Sewing Operation

For details of specifying a sewing start position, refer to "Registration of Sewing Start Position" (→ Page 104).

When is pressed while the message “Area over” is indicated on the screen, a dialog box is displayed for confirming whether or not to start sewing forcibly. Pressing starts sewing; however, depending on the start position, an interference with the frame may occur. Exercise added care when doing so.

1. Check that sewing data has been selected, then press .
   Sewing is started.

The current embroidering status is indicated.
Indicates a sequence of color changes.
No. of current stitches
Indicates a name of data currently used for sewing.
Indicates the number of data currently used for sewing.
Currently selected speed range
The range can be modified by pressing .
Feedhold and Cancellation of Sewing

Feedhold

1. Press \[STOP\].

Sewing is interrupted.

Cancellation

1. Press \[ESC\] while sewing is interrupted.

When repetition of patterns is set, a pattern which is currently being sewn is canceled. When canceling all patterns, press \[ESC\] once again.

2. A message for confirmation is displayed. When canceling sewing, press \[\]

\[\text{Cancel sewing? (}+\text{Yes} \quad \text{No)}\]
Step Forward and Step-Back

Stitches can be advanced (step forward) or retracted (step-back) without sewing.

Step Forward/Step-Back Mode

1. Press [*] when selecting either mode before starting sewing and press [STOP] when selecting a mode during sewing.

Setting Amount or Timing of Step Forward/Step-Back

A step forward/step-back amount or timing can be selected as described below.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>[†]</td>
<td>For stepping forward (back) stitch by stitch</td>
</tr>
<tr>
<td>[††]</td>
<td>For stepping forward (back) by 10 stitches</td>
</tr>
<tr>
<td>[†††]</td>
<td>For stepping forward (back) by 100 stitches</td>
</tr>
<tr>
<td>[††††]</td>
<td>For stepping forward (back) up to the next (previous) color change</td>
</tr>
<tr>
<td>[†††††]</td>
<td>For stepping forward up to the sewing start point of a next pattern if repetition of patterns is set.</td>
</tr>
</tbody>
</table>

Specify the number of stitches for stepping forward (back).

1. Select a required item as described above by pressing [*].

When the number of stitches is specified, the needle steps forward (back) to an input position:

1. Press the [*] five times.

2. Input the number of stitches to move by pressing ten keys.

3. Press the [END].

The needle steps forward (back) as specified.
4. The embroidery head advances (retracts) by a specified number of stitches.

![Image of embroidery head controls]

For Step Forward (Back)

1. Press <left arrow>.
   Stitches steps forward (back) by a specified amount.

Resuming Sewing

1. Press [START].
   Sewing is started.
Chapter 4
Editing of Embroidering Data

Pressing \( \text{[ ]} \) on the operation panel after reading embroidering data displays the embroidering data editing screen. Simple operation by using embroidering data is available on this screen.
What Can the Machine Do?

**Editing**

- Enlargement/reduction is executed ahead of rotation. When an embroidery pattern is so set to be rotated by 90° and then enlarged by 2 times in the X-axis direction, the X-axis enlargement is executed first and rotation by 90° is executed afterwards. Therefore, a pattern is enlarged by 2 times at the sewing point.

<table>

</tbody>
</table>

1. Read sewing data.

2. Press 🅱️.

3. Press ➡️ to select an angle or use ten keys to specify an angle.

4. Press END.
   The initial screen is displayed again.
Enlargement and Reduction

A pattern can be enlarged or reduced.

- The enlargement and reduction ratio is 50 ~ 200%.
- The number of stitches does not change even by enlargement or reduction of a pattern. However, stitches may become too rough or close if enlargement or reduction is excessive.
- There are the following two types of enlargement/reduction.
  - Enlargement/reduction at the same ratio in both the X and Y directions
  - Enlargement/reduction at different ratios in the X and Y directions

1. Read sewing data.
2. Press 🔄 .

Enlargement/reduction at the same ratio in the X/Y directions

3. Press ▼.
   \[ \frac{X}{Y} \] are reversed in black.

4. Input enlargement/reduction ratio by pressing ten keys.

5. Press END .
   The initial screen is displayed again.
Enlargement/reduction at different ratios in the X/Y directions

3. Press \( \nwarrow \) twice.
   \( \nwarrow \) is reversed in black.

4. Input enlargement/reduction ratio in the X direction by pressing ten keys.

5. Press \( \nabla \).
   \( \nabla \) is reversed in black.

6. Input enlargement/reduction ratio in the Y direction by pressing ten keys.

7. Press \( END \).
   The initial screen is displayed again.
Mirror

A pattern can be reversed as if it is reflected in the mirror.

- Up/down mirror pattern → Right/left mirror pattern → Zero point-symmetric mirror pattern.

<table>
<thead>
<tr>
<th>Pattern Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Right/left mirror pattern</td>
<td>The pattern is reversed in the right/left direction on the basis of the embroidering start point.</td>
</tr>
<tr>
<td>Up/down mirror pattern</td>
<td>The pattern is reversed in the up/down direction on the basis of the embroidering start point.</td>
</tr>
<tr>
<td>Zero point-symmetric mirror pattern</td>
<td>The pattern is reversed on the basis of the embroidering start point.</td>
</tr>
</tbody>
</table>

1. Sewing data is read.

2. Press .
Right/Left Mirror Pattern

3. Keep pressing  until  is displayed.

4. Press \textbf{END}.
   The initial screen is displayed again.

Up/Down Mirror Pattern

3. Keep pressing  until  is displayed.

4. Press \textbf{END}.
   The initial screen is displayed again.

Zero Point-Symmetric Mirror Pattern

3. Keep pressing  until  is displayed.

4. Press \textbf{END}.
   The initial screen is displayed again.
Repetition

A pattern is repeatedly copied as many times as specified.

The number of repetitions is 1 ~ 99 in both the vertical (row) and horizontal (line) directions.

There are the following eight directions of repetitions.

- Horizontal direction from upper left to lower right
- Vertical direction from upper right to lower left
- Horizontal direction from lower right to upper left
- Vertical direction from lower right to upper left
- Vertical direction from lower left to upper right
- Horizontal direction from upper right to lower left
- Vertical direction from upper left to lower right
- Horizontal direction from lower left to upper right

There are the following two types of intervals between repetitions.

- By setting a distance between the outer hoops of each pattern
- By setting a distance between the centers of each pattern

1. Read sewing data.

2. Press twice.

3. Input the number of repetitions in the vertical and horizontal directions, by pressing ten keys.

The vertical and horizontal directions are changed over by pressing △▼.
4. Press \( \downarrow \).

5. Input intervals between repetitions by pressing ten keys. The vertical and horizontal directions are changed over by pressing \( \triangle \). Press \( \leftarrow \) for setting a distance between the centers of each pattern.

6. Select the direction of repetitions by pressing \( \uparrow \downarrow \).

7. Press \( \text{END} \).

The initial screen is displayed again.
Other Editing

Setting of other functions related to editing is available.

The following types of setting is available.

<table>
<thead>
<tr>
<th>Setting Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 stitch deletion</td>
<td>For deleting stitches at the same point without stepping forward or back.</td>
</tr>
<tr>
<td></td>
<td>This function is previously set to [X] (for not deleting 0stitch) upon shipment.</td>
</tr>
<tr>
<td></td>
<td>[O] For deleting 0 stitch</td>
</tr>
<tr>
<td></td>
<td>[X] For not deleting 0 stitch</td>
</tr>
<tr>
<td>Thread trimming feed number</td>
<td>For setting the number of feeds for thread trimming</td>

<tr>
<td></td>
<td>The setting range is 0 ~ 1.0mm in both the X and Y directions. (The setting range is displayed as &quot;0 ~ 10&quot; on the screen.)</td>
</tr>
<tr>
<td></td>
<td>Compensation is reflected only on the satin-stitched section.</td>
</tr>
<tr>
<td></td>
<td>This function is previously set to 0 (no swing width correction) upon shipment.</td>
</tr>
</tbody>
</table>
Thread Trimming Feed Number

3. Select this function by pressing △▽.

4. Select the number of feeds by pressing ◀▶.

5. Press END after setting is finished.

Swing Width Correction

Correction values within 1 ~ 10 can be input. However, excessively large values may result in distortion of a pattern.

3. Select this function by pressing △▽.

4. Select a correction amount in the X direction by pressing ◀▶.

5. Reverse ▶ by pressing Z.

6. Input a correction amount in the Y direction by pressing ◀▶.
7. Press END after setting is finished. Press ▲▼ when setting continuously.

- Delete □ stitch
- □ trimming feed
- □ □ □ □ compensation
- □ □ □ □ □ □ □ BROTHER
Chapter 5 Setting

This Chapter describes how to set a sewing speed, correct trouble including thread breakage and others related to machine motions.
Chapter 5 Setting

What Can the Machine Do?

### Setting of Needle Bars

Needle bars allocated in the sequence of embroidering (→ Page 92)

### Setting of Thread Breakage Sensor

- Thread breakage sensor ON/OFF (→ Page 93)
- Thread breakage sensitivity (→ Page 93)
- Number of stitches in automatic step back (→ Page 94)
- Display of total stitch number in automatic step back
- Lower thread counter counts (→ Page 95)
- Stitch counter indication (→ Page 95)

### Setting of Machine

- Selection of embroidery hoop (→ Page 96)
- Display of every head/every other head (→ Page 96)
- Speed range (→ Page 97)
- Speed in speed range (→ Page 98)
- Thread trimming length (→ Page 101)
- Thread removal feed length (→ Page 101)
- Inching ON/OFF (→ Page 102)
- Sewing area (→ Page 103)
- Resetting of thread breakage error (→ Page 100)
- Needle bar stop at mending stop point (→ Page 100)
- Method of thread trimming before thread breakage error (→ Page 100)
- Method of thread trimming before stop (→ Page 100)
### Setting of Environment

### Hoop Movement

- Registration of embroidering start point (→ Page 104)
- Movement to registered sewing start point (→ Page 105)
Setting of Needle Bars

Needle bars allocated in the sequence of sewing can be modified.

- This setting is explained on the basis of the BES-1261BC screen.

1. Press \[\text{[...]}\].

2. Select a sewing sequence to modify by pressing \[\text{[...]}\].
   The current embroidering sequence is selected while embroidering is interrupted.
   \[\text{[...]}\]
   \[\text{[...]}\]
   \[\text{[...]}\]
   Press \[\text{[...]}\] for modifying all sequences at one time.

3. Input the number of a needle bar by pressing ten keys.
   When inputting a numerical figure exceeding 10, press the \[0\] first.
   \[\text{[...]}\]
   \[\text{[...]}\]

Insertion of Feedhold

Press \[\text{[...]}\] and reverse the display on the right of a point to insert a feedhold, then press \[\text{STOP}\].

4. Press \[\text{[...]}\].
   Modified setting is saved and the previous screen is displayed again.

When all sequences are modified at the same time, the screen for checking if the setting needs to be saved. Press \[\text{[...]}\] for saving the setting.

SAVE OK?
Chapter 5 Setting

Thread Breakage Sensor

Validity or invalidity and sensitivity of the thread breakage sensor can be set.

### Setting of sensor validity/invalidity

- This function is previously set to valid for all heads upon shipment.

1. Press \( \Box \).  

2. Specify the number of a machine head by pressing ten keys and validate or invalidate the thread breakage sensor. Pressing the same ten key once again changes between validity and invalidity.

   Heads with which the sensor is valid

   

   Press \( \Box \) to switch over the thread breakage sensor for each head between ON and OFF.

3. Press \( \Box \).  

   Modified setting is saved and the initial screen or halt screen is displayed again.

### Thread Breakage Sensitivity

Sensitivity of the thread breakage sensor can be set.

- The sensitivity can be set within the range of 1 ~ 100. Sensitivity increases as the figure decreases.
- This function is previously set to 10 upon shipments.

1. Press \( \Box \) twice.

2. Select the needle bar for which the sensitivity is modified by pressing \( \Box \).  

   The number of needle bars changes in the sequence of:
   ALL (all needle bars) \( \rightarrow \) 1 \( \rightarrow \) 2 \( \rightarrow \) ... 9 or 12 (max.) \( \rightarrow \) ALL \( \rightarrow \) ...

3. Select \( \Box \) by pressing \( \Box \).
4. Input sensitivity of the thread breakage sensor.

5. Press \texttt{END}.
   Modified setting is saved and the previous screen is displayed again.

\textbf{Automatic Step-Back}

The number of stitches to step back automatically in case of a thread breakage can be set.

- Setting can be done within the range of 0 ~ 10 stitches.
- This function is previously set to 0 stitches upon shipments.

1. Press \texttt{twice}.

2. Select \texttt{by pressing} \texttt{.}

3. Input the number of stitches to step back automatically by pressing ten keys.
   Pressing \texttt{sets whether to execute an extra step-back by a sensitivity amount of the thread breakage sensor in the automatic step-back mode.}

4. Press \texttt{END}.
   Modified setting is saved and the previous screen is displayed again.
Setting of Lower Thread Counter/Stitch Counter

- The lower thread counter reduces the indication each time one pattern is finished. After the reduction is finished, an error message can be displayed.
- The stitch counter increases the indication stitch by stitch.
- The lower thread counter can be validated or invalidated by pressing \( \star \).
- The stitch counter can be cleared to zero by pressing \( \text{DEL} \).

1. Press \( \underline{\text{SEL}} \) three times.

2. Input the number of counts of the lower thread counter by pressing ten keys.

3. Press \( \underline{\text{END}} \).
   Modified setting is saved and the initial screen or halt screen is displayed again.
Setting of Machine

Machine motions can be set.

### Embroidery Hoop

Specify a type of an embroidery hoop set on the machine.

- **A type of a hoop to be selected varies depending on a type of a hoop (flat or cap) selected by a switch on the operation panel.**

<table>
<thead>
<tr>
<th>When a flat hoop is selected</th>
<th>Tabular square hoop</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Sash frame</td>
</tr>
<tr>
<td></td>
<td>Flat hoop</td>
</tr>
<tr>
<td>When a cap hoop is selected</td>
<td>Cap hoop</td>
</tr>
</tbody>
</table>

- **All heads or every other head can be selected by pressing **.

  - **All heads**
  
  - **Every other head (The heads with odd numbers only are operated).**

- When operating every other head, refer to "Bed Retract" (→ Page 45) and retract heads with even numbers.

1. Press **.
2. Select ** by pressing **.
3. Press **.
4. Select a type of a hoop by pressing **.
5. Select either all heads or every other head by pressing **.
6. Press **.

Modified setting is saved and the previous screen is displayed again.
Speed Range
A range of speed for each needle bar can be set.
- This setting is explained on the basis of the BES-961 screen.
- The speed range can be set within the range of 1 ~ 6.

1. Press \( \text{[ ]} \).

2. Select \( \text{[ ]} \) by pressing \( \langle \rangle \).

3. Press \( \text{[ ]} \).

4. Select a needle bar by pressing \( \langle \rangle \).
   When setting the same speed range for all needle bars, press \( \# \).
   When modifying the speed range for one needle bar
   
   \[
   \begin{array}{ccccccc}
   & & & & & & \\
   & & & & & & \\
   \end{array}
   \]
   When modifying the speed range for all needle bars

5. Input a required speed range by pressing ten keys.

6. After modification is finished, press \( \text{[ ]} \).
   Modified setting is saved and the previous screen is displayed again.
Speed of Each Speed Range

Maximum speed of each range can be set.

- Speed can be input in increments of 10spm.
- The upper limit of a speed to be set varies depending on a selected hoop.

1. Press \[ Image\] .

2. Select \[ Image\] by pressing [△ △].

3. Press \[ Image\] .

4. Select a speed range to modify by pressing [△ △].

5. Input a required speed by pressing ten keys.

6. After modification is finished, press \[ Image\].

Modified setting is saved and the previous screen is displayed again.
Setting of Mending

Details of mending can be set in case of a thread breakage.

Contents of each setting item are as described below.

<table>
<thead>
<tr>
<th>Item</th>
<th>Contents</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>For setting a mending end point (number of stitches before a thread breakage) within the range of 1 ~ 10. This function is previously set to 5 stitches upon shipments.</td>
</tr>
<tr>
<td></td>
<td>For setting whether to reset a thread breakage error automatically. This function is previously set to (Manual) upon shipments.</td>
</tr>
<tr>
<td></td>
<td>For resetting an error automatically.</td>
</tr>
<tr>
<td></td>
<td>For resetting an error manually.</td>
</tr>
<tr>
<td></td>
<td>For setting whether to stop embroidering temporarily at the mending end point.</td>
</tr>
<tr>
<td></td>
<td>For stopping embroidering at the mending end point.</td>
</tr>
<tr>
<td></td>
<td>For stopping embroidering temporarily at the mending end point and then starting all heads automatically.</td>
</tr>
<tr>
<td></td>
<td>For setting a thread trimming method using the immediately after resetting a thread breakage error. (This setting is effective only once after resetting the error.)</td>
</tr>
<tr>
<td></td>
<td>For trimming both upper and lower threads.</td>
</tr>
<tr>
<td></td>
<td>For trimming the lower thread only.</td>
</tr>
<tr>
<td></td>
<td>For not trimming any thread.</td>
</tr>
</tbody>
</table>

Refer to "Mending"(→Page 121).

1. Press .

2. Select by pressing .

3. Press .
Chapter 5 Setting

Setting of thread breakage error resetting method

4. Select AUTO by pressing <.

5. Press * for modifying a resetting method.

For setting whether to stop embroidering temporarily at the mending stop point

4. Select * by pressing <.

5. Press * and select whether to stop embroidering temporarily.

Setting of thread trimming method after stopping

4. Select a stop point (number of stitches before a thread breakage) by pressing ten keys.

Setting of mending stop position

4. Select a stop point (number of stitches before mending) by pressing ten keys.
The machine does not stop if the automatic step-back setting is lower than the input value.

After setting all items, press END.

Modified setting is saved and the initial screen is displayed again.
Thread Trimming Length

Length of thread to leave on the needle bar after thread trimming can be set for each needle bar.

- This function is previously set to 5 upon shipments.

1. Press  .

2. Select  by pressing  .

3. Press  .

4. Select a needle bar to modify by pressing  .

5. Input thread length by pressing ten keys. Thread length can be input within the range of 1 ~ 10. Length decreases as the figure decreases. When inputting "10", press the 0 SPACE first.

6. After setting is finished with all needle bars, press  . Modified setting is saved and the previous screen is displayed again.

Thread Withdrawal Feed Length

Thread withdrawal length can be set before thread trimming.

- The input range is 0 ~ 100mm.
- This function is previously set to 15mm upon shipments.
Chapter 5 Setting

1. Press \( \text{button} \).

2. Select \( \text{button} \) by pressing \( \Rightarrow \).

3. Press \( \text{button} \).

4. Input thread withdrawal length by pressing ten keys.

5. Press \( \text{END} \).

Modified setting is saved and the previous screen is displayed again.

Inching

Whether to select the inching mode for thread trimming can be set.

- This function is previously set to selected upon shipments.

1. Press \( \text{button} \).

2. Select \( \text{button} \) by pressing \( \Rightarrow \).

3. Press \( \text{button} \).

4. Set whether to select the inching mode by pressing \( \ast \).

5. Press \( \text{END} \).

Modified setting is saved and the previous screen is displayed again.
Sewing Area

An allowable area for sewing can be set.

- Pressing moves the hoop to the currently selected coordinates.
- A maximum sewing area during operation of every other machine heads is as shown below.

1. Press .
2. Select by pressing .
3. Press .
4. Specify coordinates of the upper left of the sewing area. Move the hoop by pressing .
5. Press .
6. Specify coordinates of the lower right of the sewing area. Move the hoop by pressing .
7. Press .

Pressing restores a status before modification of setting.
Registration of Sewing Start Position

Register a position to start sewing.

- When returning to a registered sewing start position, hold down STOP and press .

1. Press the key.
   The hoop coordinates are displayed.

2. Shift the hoop to a position to start sewing by pressing the ▲ ▼ ◄ ► .

3. Press END .

4. Press the key.

   Origin register
   (Y=Yes N=No)

Hoop Retract Point

The hoop basic point (retract point) can be set when sewing is interrupted.

- When restarting sewing after the hoop is retracted during an interrupt, press START .

1. Press .

2. Move the hoop by pressing ▲ ▼ ◄ ► .

3. Press END .
   Modified setting is saved and the initial screen or halt screen is displayed again.
   The hoop returns to the initial point.

Cancellation of Setting

1. Press once again.
   Modified setting is canceled and the initial screen or halt screen is displayed again. The hoop returns to the initial point.
Hoop Automatic Retract

Set whether to move the hoop automatically to the retract point at the end of sewing.

- This function is previously set to no hoop automatic retract upon shipments.

1. Press 🎯.

2. Select whether to retract the hoop automatically by pressing ⚛.

   For automatically retracting the hoop

   ![Image of automatically retracting hoop]

   For not retracting the hoop automatically

   ![Image of not retracting hoop]

3. Press END.

   Modified setting is saved and the initial screen or halt screen is displayed again.

Movement to Registered Sewing Start Point

This operation should be done before starting sewing.

1. Hold down STOP and press 🎯.

2. The hoop moves and the zero point is detected. Then the hoop moves to a registered start point.

   ![Diagram of movement to registered start point]

3. The initial screen is displayed again.
Chapter 5 Setting

Setting of Environment

Return to Start Point

Whether to return to the start point after sewing is finished can be set.

1. Press twice.

2. Select by pressing ◀.

3. Press .

4. Select by pressing ◀.

5. Select whether to validate a return to the start point by pressing .

   - When the start point return is valid
   - When the start point return is invalid

6. Press END.

   Modified setting is saved and the previous screen is displayed again.
### Speed Range

For setting whether to reflect modified machine speed to all needle bars.

1. Press twice.

2. Select  by pressing .

3. Press .

4. Select  by pressing .

5. Modify setting by pressing .
   Press ESC for invalidating the modification.

6. Press END .
   Modified setting is saved and the previous screen is displayed again.

### Power Voltage

Voltage of power supplied to the machine can be specified.

- Available voltage is 200V, 220V, 230V and 240V.

<table>
<thead>
<tr>
<th>Item</th>
<th>Contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>200V</td>
<td></td>

</tr>
<tr>
<td>240V</td>
<td></td>
</tr>
</tbody>
</table>

1. Press twice.

2. Select  by pressing .
3. Press \footnotesize{\textcircled{\textbf{1}}}.

4. Select voltage by pressing \footnotesize{\textcircled{\textbf{2}}}.

5. Press \footnotesize{\textcircled{\textbf{5}}}.
Modified setting is saved and the previous screen is displayed again.

### Setting of RS-232C Communication Speed

Speed for transferring embroidery data between the operation panel and a personal computer with BE-100 installed.

- The transmission speed can be selected within the range of 9600, 19200, 38400 and 115200. (unit : bps)

1. Press \footnotesize{\textcircled{\textbf{1}}} twice.

2. Select \footnotesize{\textcircled{\textbf{2}}} by pressing \footnotesize{\textcircled{\textbf{2}}}.

3. Press \footnotesize{\textcircled{\textbf{3}}}.

4. Select [RS Speed] by pressing \footnotesize{\textcircled{\textbf{4}}}.

5. Select communication speed by pressing \footnotesize{\textcircled{\textbf{5}}}.

6. Press \footnotesize{\textcircled{\textbf{6}}}.
Modified setting is saved and the previous screen is displayed again.
Display Language

A language to display on the screen can be set.

The following languages can be selected.

<table>
<thead>
<tr>
<th>Display</th>
<th>Contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>JPN</td>
<td>Japanese</td>
</tr>
<tr>

</tbody>
</table>

1. Press twice.

2. Select by pressing.

3. Press .

5. Select a language to display by pressing .

6. Press .

The previous screen is displayed again with a display in a selected language.
Chapter 5 Setting

Alarm Sound

Whether to generate a sound in case of an error can be set.

The following sounds can be set.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>ON</td>
<td>A sound is generated until the error is reset.</td>
</tr>
<tr>
<td>OFF</td>
<td>A sound is generated twice.</td>
</tr>
<tr>
<td>5</td>
<td>A sound is generated five times.</td>
</tr>
</tbody>
</table>

1. Press twice.

2. Select by pressing 

3. Press .

4. Select [Beep] by pressing 

5. Select a kind of sound by pressing 

6. Press .

Modified setting is saved and the previous screen is displayed again.
Boring

Whether to validate or invalidate the boring mode and to shift data in case of boring can be set.

- This setting is available only for sewing data which has been created for boring.
- The machine itself cannot check if the sewing data is for boring or not. Therefore, make sure to check the data before starting sewing.
- Mount the following optional accessories on the machine before starting sewing.
  - Boring knife
  - Needle plate for boring
- If editing including enlargement, reduction or rotation is done using sewing data created for boring, the correct sewing may not be available.
- This function is previously set to:
  - Boring mode valid/invalid : invalid
  - Data shift valid/invalid : invalid

**Validation/Invalidation of Boring Mode**

1. Press twice.

2. Select by pressing <↓>.

3. Press .

4. Select by pressing <↓>.
5. Validate or invalidate the boring mode by pressing [*].

When the boring mode is valid

When the boring mode is invalid

Validation/Invalidation of Data Shift

1. Press [ ] twice.

2. Select [ ] by pressing [ ].

3. Press [ ].

4. Select [ ] by pressing [ ].

5. Validate or invalidate the data shift by pressing [*].

When the data shift is valid

When the data shift is invalid

6. Press [ END ].

Modified setting is saved and the previous screen is displayed again.
Display of Information

Information about the machine and patterns can be displayed on the screen.

Pattern Information

Detailed information about a selected pattern can be checked.

Contents of information to be displayed are as shown below.

2. Select 📄 by pressing ◀▶.

3. Press 🌼.

4. Check information about the machine.

5. Press ⬜️.  
The previous screen is displayed again.
Information about Versions

Information about CPU ROM version, etc. can be checked.

Contents of information to be displayed are as shown below.

- Operation panel version
- Main CPU ROM version
- Upper axis CPU ROM version
- Lower axis CPU ROM version
- Interface CPU ROM version

1. Press \[\text{button}\] three times.

2. Select by pressing \[\text{button}\].

3. Press \[\text{button}\].

4. Check information about versions.
   The version is displayed by the combination of alphabets (A ~ Z) and numerical figures (1 ~ 9).

5. Press \[\text{button}\].
   The previous screen is displayed again.
Chapter 6  Operation of Machine
1. Operating Procedures

1-1 Power Source

- Turn the power on to the machine.
- A message is displayed on the LCD.
- The alarm sounds three times and the needle bar and the presser foot move upward. Then the hoop moves to the zero point and the sewing data screen is displayed.

Note) When turning the power off and back it on again, wait for at least 10 seconds.

1-2 Preparation for Embroidering

- Select embroidering data.
- Using the jog switches (△ ▽ ◀▶), determine a position to start embroidering.
  Note) An error message is displayed on the LCD if a pattern comes out of the hoop.
- Pressing [START] starts embroidering.
- After embroidering is finished, the machine is placed in the stand-by state.
2. Machine Stop

2-1. Stopping of Machine

Press the emergency stop switch or to STOP the machine.

2-2. Resetting Emergency Stop

- When either emergency stop button is depressed, "Emergency stopping" is displayed on the operation panel.
- For resetting the emergency stop button, turn the button in the direction of the arrow. The button pops up and is reset.
- Check that both emergency stop buttons on the right and left are reset.
3. Measures against Thread Breakage

3-1 Remedies

1. If embroidering is suspended due to thread breakage, the THREAD SENSOR lamp of the machine head with a thread breakage blinks.

2. Correct the broken thread and pass it through again.
   * Refer to "Chapter 1, 4-1 Upper Threading" (→ Page 34) for details.

3. Press the STOP switch or press the STEP BACK/FWD switch in order to reset the alarm.

4. Return the hoop to a position where thread breakage occurred by pressing the STEP BACK switch.

   Note) When the switch is turned for 20 stitches or more, the machine continues operation without holding the switch. To stop the machine, turn the switch to the opposite side.

5. Press the START switch on the operation panel or the start switch located between the machine heads to resume operation.

3-2 Mending
The machine head whose MENDING lamp is lit performs embroidering by the preset number stitches. When it is completed, all the machine heads start normal embroidering operation.

- The MENDING lamps except for the machine head whose needle thread has been broken are turned off.

- At this time, the machine head, whose MENDING lamp is on, performs resewing from the step-back position while the other machine heads (with MENDING lamps off) are stopped. When resewing is completed, the other machine heads (except those halted or with bed retracted) also start embroidering.

### Manual operation

The mending start and end positions can be set for each machine head using the MENDING switch on the tension plate.

The MENDING lamp is lit when the MENDING switch of each machine head is flipped up during standby. Resewing from the step-back position to this position can be executed.

- When the MENDING switch is flipped up while the MENDING lamp is off, the lamp is turned on; when the MENDING switch is flipped up again while the MENDING lamp is lit, the lamp is turned off.

Note: The mending end position cannot be set for each machine head.

When all MENDING lamps are turned on, the mending end position will be set to the position where one of the lamps is turned off first.

Note: To cancel the mending end position, turn all the MENDING lamps are turned on (except for halted machine heads).
1. Turn off the MENDING lamp No. 3 at the standby position A. 
   (The position A should be the mending end position.)

2. Press the jog switch or to move it backward.
   Turn off the MENDING lamp No. 2 at the position B.
   (The position B does not become the end position; the position A remains the end position.)

   Note) When the MENDING switch of the machine head whose lamp is off is pressed:
   - The MENDING lamp of the machine head is lit, and mending is executed for the machine head.

   Note) When the MENDING switch of the machine head whose lamp is on is pressed:
   - The MENDING lamp of the machine head goes off and mending is not executed for the machine head.

When a thread breakage error is occurring, refer to "Setting of Mending" (Page 99) as well in order to correct missing stitches caused by a thread breakage.
4. Jog Embroidering

- Jog embroidering can be used for preventing the thread from slipping from the needle at the start of embroidering.
- Jog embroidering can be executed as long as the start switch at the machine head is held down.

Note) Never apply a tape on the switch to keep jog operation for a long time. Doing so may cause damage to the machine.

5. Hoop Feed Position

- In order to ease mounting and dismounting of the embroidery hoop, another needle position can be set as a hoop feed position in the movable area additionally to the current needle position.

- In order to ease material attachment while operation is suspended, the hoop can be moved to the feed position at any time by the hoop feed switch.

- The hoop can also be moved to the feed position automatically after embroidering is finished. Refer to "Hoop Automatic Retract" on Page 105 for details.
6. Area Check

6-1 External Tracing

- If the check switch is pressed in other cases than "area over", the rectangular outline of the pattern is traced.

6-2 Automatic Hoop Movement in Area

- If "area over" is displayed, press the check switch. The hoop automatically moves inside the embroidering area, where the pattern is set, at the nearest position.

Note) After finishing the movement inside the area by this function, execute external tracing. Then, check that the needle and the presser foot do not interfere with the hoop before starting embroidering.

If the pattern is not held in the embroidering area as shown below, the hoop cannot move into the area. Enlarge the embroidering area on the operation panel.
7. Jog Switches

7-1 Hoop Movement to Start Position

The hoop immediately after the embroidering mode becomes valid can be moved so that the start position can be set as required.
7-2 Inching Mode during Embroidering (Forcible Hoop Movement)

Note) • Moving the frame greatly in the inching mode may cause an interference with the machine. Pay utmost care in the inching mode.
• The frame movement in inching mode is cleared when the power is turned OFF; therefore, if the power is turned ON again and sewing is started, the pattern may be embroidered in a different position. Be sure to use the inching mode appropriately.

1. Press the "STOP" switch in order to select the inching mode.

2. Press the jog switch and the hoop moves to the direction of the pressed switch.

Note) • Note that the forcible hoop movement will produce deviation of embroidering by the amount.
• If the hoop and material are deviated from each other during embroidering, correct it by using the jog switches.

3. Pressing the "END" switch resets the inching mode.

4. Press the "START" switch restarts embroidering.
8. Detection of Zero Point

After the zero point is detected, the hoop returns to the initial point.

1. Before starting sewing, press the space button while pressing the stop button when the initial screen is displayed.

2. The hoop moves and the zero point is detected.

3. The initial screen is displayed again.
Chapter 7  Maintenance
Chapter 7  Maintenance

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Turn off the power switch before starting maintenance. Failure to do so may start the machine unintentionally through an accidental activation of the START switch, resulting in bodily injuries.</td>
</tr>
<tr>
<td>Be sure to wear protective goggles and gloves when handling the lubricating oil or grease, so that no oil or grease gets into your eyes or onto your skin, otherwise inflammation can result. Furthermore, do not drink the oil or grease under any circumstances, as they can cause vomiting and diarrhoea. Keep the oil out of the reach of children.</td>
</tr>
</tbody>
</table>

- Keep the machine clean at all times to prevent machine trouble.
- Keep the machine clean.
  Remove dirt with a soft, dry cloth. If necessary, clean with the detergent-soaked cloth, then wipe off the detergent with a cloth dampened with (hot) water.
- Caution
  Never use benzene or thinner for cleaning the machine.

1. Cleaning Rotary Hook
2. Oiling

To extend the machine’s service life, supply oil to the following places at regular intervals.

(Note) • When oiling, be sure to supply Brother’s machine oil (Nisseki Sewing Lube #10 or the equivalent) using the dropper.
• Excessive oiling may cause the material to be stained.

2-1 Head

■ BES-961BC

■ Supply oil to the needle bars (18 positions) once a day as shown on the left.

■ BES-1261BC

■ Supply oil to the needle bars (24 positions) once a day as shown on the left.
**BES-961BC**

Lubricate the following part indicated by the arrow ("clearance" between the connecting rod and the needle thread take-up bearing) once a week.

(Note) • In lubrication, select needle bar 9 and remove arm cover L to check the lubrication area. Be sure to wipe off excessive oil spilt at the lower part of the arm.

**BES-1261BC**

Lubricate the following part indicated by the arrow ("clearance" between the connecting rod and the needle thread take-up bearing) once a week.

(Note) • In lubrication, select needle bar 12 and remove the head cover to check the lubrication area. Be sure to wipe off excessive oil spilt at the lower part of the arm.
3. Greasing

To extend the machine’s service life, supply grease to the following places at regular intervals.

(Note) • When greasing, be sure to use the grease tank BR2 (black) provided with the machine.
• For overhauling, contact your distributor or refer it to trained experts.

3-1 Head

Grease two places indicated by the arrow once a month.

1. Remove two connectors from the rear of the needle bar case.

2. Loosen four bolts ①, and remove the needle case ②.

3. Loosen three screws ③, and remove the presser foot guide plate ④.

4. Loosen two bolts ⑤, and remove the arm cover L ⑥.

5. Grease all the grooves of the thread take-up cam ⑦ and the work clamp cam ⑧.

6. After greasing, assemble in the reverse order.

(Note) • When assembling the needle bar case ②, place it on the machine and turn the change pulley ⑩ behind the cover ③ at right. Check that it is engaged, and then tighten the bolts.
• When attaching the presser foot guide plate ④, move the presser foot up and down by the retracting lever to check that it is not distorted.
1. Remove two connectors from the rear of the needle bar case.

2. Loosen four screws 1, and remove the head cover 2, and loosen two screws 3 and remove the head cover R 4. 
(Note) Because the heads No.1 and No.2 have the head covers R and L respectively, remove both the covers when greasing.

3. Loosen four bolts 5, and remove needle bar case 6.

4. Loosen three bolts 7, and remove presser foot guide plate 8.

5. Grease all the grooves of the thread take-up cam 9 and the work clamp cam 10.

6. After greasing, assemble in the reverse order.
(Note) • When assembling the needle bar case 6, place it on the machine and turn the change pulley 12 behind the cover 11 at right. Check that it is engaged, and then tighten the bolts.
• When attaching the presser foot guide plate 8, move the presser foot up and down by the retracting lever to check that it is not distorted.
1. Remove two connectors from the rear of the needle bar case.

2. Loosen four bolts ①, and remove the needle case ②.

3. Loosen three screws ③, and remove the presser foot guide plate ④.

4. Loosen two screws ⑤, and remove the arm cover L ⑥.

5. Loosen four screws ⑦, and remove the head cover ⑧.

6. Loosen two bolts ⑨, and remove the cap eaves guide ⑩.

7. Loosen three bolts ⑪, and remove the wiper solenoid assembly ⑫.

8. Remove the screws at the places indicated by the arrow, insert grease into the tapped hole using the syringe. Then tighten the bolts.

9. After greasing, assemble in the reverse order.

(Note) • When assembling the needle bar case ②, place it on the machine and turn the change pulley ⑩ behind the cover ⑬ at right. Check that it is engaged, and then tighten the bolts.

• When attaching the presser foot guide plate ④, move the presser foot up and down by the retracting lever to check that it is not distorted.

For more information, refer to the illustration in step 6 on page 133.
1. Remove two connectors from the rear of the needle bar case.

2. Loosen four screws ①, and remove the head cover ②, and loosen two screws ③ and remove the head cover R ④.
   (Note) Because the heads No.1 and No.2 have the head covers R and L respectively, remove both the the covers when greasing.

3. Loosen four bolts ⑤, and remove the needle case ⑥.

4. Loosen three screws ⑦, and remove the presser foot guide plate ⑧.

5. Loosen two bolts ⑨, and remove the cap eaves guide ⑩.

6. Loosen three bolts ⑪, and remove the wiper solenoid assembly ⑫.

7. Remove the screws ⑬ at the places indicated by the arrow, insert grease into the tapped hole using the syringe. Then tighten the screws. Also grease the presser bar spring ⑭, the pressure bar guide bracket ⑮, the pressure bar metal U ⑯ and D ⑰.

8. After greasing, assemble in the reverse order.
   (Note) • When assembling the needle bar case ⑥, place it on the machine and turn the change pulley ⑱ behind the cover ⑰ at right. Check that it is engaged, and then tighten the bolts.
   • When attaching the presser foot guide plate ⑧, move the presser foot up and down by the retracting lever to check that it is not distorted.

For more information, refer to the illustration in step 6 on page 134.
3-2 Feed Guide Section

Check the X-feed linear guides (3 positions) and the Y-feed linear guides (one each on the right and left).

(Note) When greasing, be sure to use the grease tank 30 provided with the machine.

Procedure

1. Loosen 12 screws ①, and remove the X-feed cover ②.
2. Loosen eight screws ③, and remove the Y-feed cover ④ from the right and left.
3. Loosen 13 screws ⑤, and remove the bed covers B ⑥ and C ⑦.
4. Grease the X-feed linear guides (3 positions), the Y-feed linear guides (one each on the right and left), and the linear guide inside the No. 3 bed. Slide the guide to spread grease entirely.
5. After greasing, assemble in the reverse order.
Chapter 8  Standard Adjustment
Turn off the power switch and pull out the plug before starting adjustment. Failure to do so may start the machine unintentionally through an accidental activation of the START switch, resulting in bodily injuries.

• Adjustment

CAUTION

If adjustment should be made while the power switch is turned on, pay special attention to your safety.

Maintenance and inspection of the machine should be conducted only by trained engineers.

1. Adjusting Needle Bar Height

Do not hit this section.

Tighten the bolt so that the clearance can be even.
1. Dismount the pulley cover and turn the pulley B ① until the pulley scale indicates 180° and the needle bar is set at the lowest position. (The pulley B "Ⅱ" mark and the stop mark "Ⅱ" are aligned.)

2. Insert the positioning bar ② into the hole of the pulley ① and fix the drive shaft.
   Note) Turn the pulley B securely in the clockwise direction to eliminate a backlash.

3. Loosen the needle bar clamp set screw ③ and the bolt ⑦ of the top dead center stopper ⑥ when the needle tip is positioned 10.8 mm above the center of the rotary hook shaft. Adjust the position of the needle bar thread guide so that the set screw ④ on it is turned to the right by 25 ~ 30°. Tighten the needle bar clamp set screw ③ securely.
   Note) When tightening the needle bar clamp set screw ③, the hole in the needle bar guide should face the front.

4. After adjustment is finished, remove the positioning bar ②.

5. Set the needle bar at the highest position (where the pulley B indication mark "Ⅱ" and the cover indication mark "Ⅱ" are aligned). Lightly press the top dead center stopper ⑥ toward the cushion rubber ⑧, and tighten the top dead center stopper bolt ⑦ while pressing down the needle bar clamp so that it faces the front.
   Note) • Make sure that the top dead center stopper does not hit the needle bar guide rail ⑧ at this time.
   • When tightening the upper dead point stopper bolt ⑦, insert the longer side of the attached wrench into the bolt and tighten it by using the shorter side.
   Excessive tightening may make the needle bar movement sluggish.
When using the bottom dead center gauge

- Do not hit this section.
- Tighten the bolt so that the clearance can be even.
- Do not hit this section.
1. Turn the pulley B ① until the scale of pulley B ① indicates 180° (where the pulley B indication mark "Ⅱ" and the stop mark "ⅠⅠ" are aligned) and the needle bar is set at the lowest position.

2. Insert the positioning bar ② into the hole of the pulley B ① and fix the drive shaft.
   Note) Turn the pulley B securely in the clockwise direction.

3. Insert the bottom dead center gauge ③ into the rotary hook ④.

4. Loosen the screw ⑤ of the needle bar clamp ⑤ and the top dead center stopper bolt ⑥, then move the needle bar up and down until the needle tip touches the gauge ③ lightly.
   Note) • The needle point should touch the gauge at a place other than the cutting section.
   • The bottom dead center gauge should be set in or removed from the rotary hook with its cutting section facing upward.

5. Tighten the screw ⑤ of the needle bar clamp ⑤ securely.

6. After adjustment is finished, remove the positioning bar ②.

7. Set the needle bar at the highest position (where the pulley B indication mark "Ⅰ" and the cover indication mark "Ⅰ" are aligned). Lightly press the top dead center stopper ⑦ toward the cushion rubber ⑧, and tighten the top dead center stopper bolt ⑥ while pressing down the needle bar clamp so that it faces the front.
   Note) • Make sure that the top dead center stopper ⑦ does not hit the needle bar guide rail ⑩ at this time.
   • When tightening the upper dead point stopper bolt ⑥, insert the longer side of the attached wrench into the bolt and tighten it by using the shorter side.
   Excessive tightening may make the needle bar movement sluggish.
2. Replacing (Attaching) Rotary Hook

1. Turn the power switch off.
2. Tighten the screw ① of the rotary hook cutting section to fit to that of the lower shaft ②.
3. When mounting, press it inward until it stops.
   Note) After replacing rotary hooks, refer to "4. Adjustment of Timing Between Needle and Rotary Hook (Page 146)" and adjust the timing.
3. Adjustment of Clearance Between Needle and Rotary Hook

1. Turn the power switch off.

2. Select the needle bar No. 1 ①.
   The illustration at the left shows the case of BES-961BC. For BES-1261BC, the No. 12 needle becomes 9.

3. Remove two flat screws ② and dismount the needle plate ③.

4. Turn the pulley B until the pulley indication mark "A" and the stop mark "NH3" are aligned.

5. Turn the rotary hook ⑤ manually so that the rotary hook point is aligned properly.

6. Loosen the set screw ⑥ on the side of the bed ⑤.

7. Turn the eccentric screw ⑦ on the left side of the bed ⑤ using a regular screwdriver and adjust a clearance between the needle and the rotary shaft to 0.3 ~ 0.5 mm.

8. Adjust the clearance between the needle and the rotary hook's point to 0.3 ~ 0.5 mm at the needle bar No. 9 ⑧ (No. 12 needle for BES-1261BC).

   Note) If the clearance between the needle and the rotary hook point is not within the range of 0.3 ~ 0.5 mm, adjust again as described in the step ⑦ until the needle bar No. 1 or No. 9 (No. 12 for BES-1261BC) whichever has the smallest clearance may not be interfered by the rotary hook point.
4. Adjustment of Timing Between Needle and Rotary Hook

1. Turn the power switch on.

2. Check that the machine pulley B ı is at the stop position (at 100° of the scale). If not, turn the pulley B ı until it comes to the stop position.

3. While the machine is at the stop position (when the initial screen or halt screen is displayed), press the ▼ while holding down the STOP . The rotary hook of each head turns to a currently set alignment position for adjustment of the rotary hook.

4. Turn the pulley B ı manually until the relationship between the needle point and the rotary hook’s point can be easily checked (at around 140° of the scale).

5. Press the STEP BACK/FWD switch to move the rotary hook for each head to adjustment.
   - STEP BACK
     For rotating the rotary hook little by little in the clockwise direction
   - STEP FWD
     For rotating the rotary hook little by little in the counterclockwise direction

Make this adjustment for each machine head so that the needle and the rotary hook’s point can fit with each other.
6. After timing adjustment the is finished for each head, set the pulley B to the stop position (at 100° of the scale) and press ESC. The machine enters the standby state.

The adjustment of the rotary hook is completed and the timing is stored. The rotary hook returns to the stop position accordingly.

5. Adjustment of Presser Foot Height

1. Turn the power switch off.

2. Select the needle bar No. 1.

3. Loosen the screw 2 of the presser foot 1, and adjust the presser foot 1 until it comes above the cloth top surface when it is at the alignment position (where the pulley B indication mark "A" and the cover indication mark "A" are aligned).
6. Adjustment of Thread Trimmer

6-1 Attaching the Fixed Knife

Attach the fixed knife ① to the pin ② and move it backward to the end of the slot, then mount it there.

6-2 Checking the Movable Knife Position

1. Turn the power switch on and wait until the hoop home position detection is finished.

2. Press the Emergency stop switch in order to ensure maximum safety during adjustment.

Adjust the movable knife position in this state.

3. Loosen two bolts ③ that connect the thread trimmer connecting rods B ① and C ②.

4. Tighten the two bolts ③ until the triangle part of the movable knife ④ is projected by 1 mm from the fixed knife ⑤.

* Precautions for tightening the two bolts ③:
• The thread trimmer connecting rod B 1 has a backlash of about 0.1 ~ 0.2 mm back and forth. Tighten the two bolts 3 while pulling them forward by the backlash amount.

• Tighten the two bolts 3 so that the thread trimmer connecting rods B 1 and C 2 are positioned in a straight line.

5. After adjustment is finished, reset the emergency stop button. "Emergency Stopping" disappears.

6. Turn the power switch off once, then on again. Check that the clearance between the movable knife 4 and the fixed knife 5 is 1 mm.

7. When adjusting again, follow the step 2 and after.
6-3 Adjusting the Belt Tension

The belt tension is adjusted to the optimum tension at the time of shipment from the factory. However, as the belt is used, it becomes run in and may loosen around the machine pulley and motor pulley. Use the following procedure to check the belt tension.

Place a gauge against the belt 1, loosen the nut 2, and then turn the nut 3 to move the slot to the appropriate position so that there is 8 mm of deflection in the belt 1 when 9.8 N (1 kgf) of pressure is applied.

The machine operating direction is counterclockwise when seen from the machine pulley end.

| E-BC | No power error                             | Press  
| E-BD | Lower shaft flash memory error             | Turn the power off once, then on again. If the same error occurs, the main PC board is faulty. |
| E-BE | Lower shaft version-up error               | Press  and clear the error display and upgrade the version again.                            |
| E-C1 | Area over during embroidering             | Set the embroidering area again.                                                            |
| E-C2 | Wiper out error                            | If the wiper is tangled with a thread, remove it. Then press  .                             |
| E-C4 | Presser foot down error                    | Press  .                                                                                     |
| E-CB | Main(Z) motor speed error                  | Press  and clear the error display. Then press  . If the same error occurs again, there is a possibility that the spindle is overloaded. |
| E-CE | Cylinder bed position error                | Secure to bed.                                                                               |
| E-D0 | Power PCB error                            | Turn the power off once, then on again. If the same error occurs again, the power PC board is faulty. |
| E-D1 | Cooling fan motor stop                     | Turn the power off. Check that the fan on the left or bottom rear of the control box is not tangled with a harness, etc. before turning the power on again. If the same error occurs again, the fan or the power PC board is faulty. |
| E-D2 | Power voltage upper limit error            | Press  . If the same error occurs again, the power PC board or the power supply is faulty. |
| E-D3 | Power voltage lower limit error            |                                                                                              |
| E-E1 | X-axis pulse motor overcurrent stop        | Turn the power off once, then on again. If the same error occurs again, the pulse motor or the main PC board is faulty. |
| E-E2 | Y-axis pulse motor overcurrent stop        | Turn the power off.                                                                           |
| E-E3 | Exhaust fan motor stop                     | Press  . If "OFF" is displayed, turn the power off. Check that the fan at the right rear of the control box is not tangled with a harness, etc. before turning the power on again. If the same error occurs again, the fan or the power PC board is faulty. |
| E-E4 | Hook motor error                           | Finish the test mode or turn the power OFF once, then ON again. If the same error occurs again, the main PC board is faulty. |
Chapter 10  Troubleshooting

If there is any indication of trouble with the machine, check and correct as described in the table. If the trouble cannot be corrected, turn off the power and contact your distributor for corrective actions.

</tbody>
</table>
| **Machine operation abnormal** | • Is any set screw of the rotary encoder loosened?  
• Is any set screw of the machine pulley loosened?  
• Is any set screw of the machine motor pulley loosened?  
• Is embroidery data normal? |
| **Upper shaft locks at a certain point in one cycle** | • Is the thread take-up stopped due to interference with the upper case cover?  
[Adjustment]  
Loosen the hexagon socket head cap screw of the thread take-up operating lever and adjust the take-up movable range.  
Tighten it securely afterwards.  
• Are the needle bar clamp and the top dead center stopper positioned correctly? |
| **Error display** | • Check the rotary hook of a machine head whose MENDING lamp (green) is blinking to see if the thread is caught.  
[Adjustment]  
1. Take out the thread tangled in the rotary hook race so that the rotary hook can be rotated forcibly by manual operation.  
2. Check that the machine pulley is set to 100˚ of the scale, and press the END switch.  
[Measures]  
1. If the thread end is left too long or stitching is left loosened before starting embroidering, the thread is caught in the machine and operation stops.  
2. When starting embroidering, hook the thread end on the spring or hold it with a hand.  
3. Leave thread of about 60 ~ 70 mm from the needle hole when starting embroidering. |
| **Upper shaft pulley does not turn.** | • Is the presser foot lifted at a retract position when the power is turned on?  
Lower the presser foot for the six machine heads using the lever. |
| **Stitches cannot be made.** | • Is the needle attached properly?  
• Is the timing of the needle and rotary hook correct? |
## Electrical Section

| The operation panel is not displayed though the power switch of the machine is turned ON. | • Is the cable correctly plugged in?  
• Is the connector securely connected from the operation panel to the control box? |
| An error is indicated on the operation panel, and no operation is possible. | • Refer to the error message list for troubleshooting.  
If the error persists, contact your distributor. |
Connection and Installation of Optional Equipment
Attaching Bobbin Winder

1. Remove four screws 1 and dismount the side cover LB 2.
2. Set the spool shaft B 3 into the hole of the removed side cover LB 2 and fix the shaft with a nut and a spring washer. Then put the spool mat A 4 through the spool shaft B 3.
3. Remove two screws and dismount the bridge cover B 5.
4. Mount the bobbin winder stay 6 on the bridge 7 along with the bridge cover B 5 using two screws removed from the bridge cover. Then mount the bobbin stand L 8 on the bobbin winder stay 6.
5. Mount the bobbin winder assembly 9 on the bobbin winder stay 6 using screws.
6. Insert the bobbin winder harness 10 in the 2P (No. 6) connector on the rear side of the control box.
   Note) Be careful not to allow the bobbin winder harness to come into contact with the hoop in motion.
7. Mount the side cover LB 2 using four screws 1.
1. Turn the power switch on.

2. Set the bobbin ① in the bobbin winder shaft ②.

3. Put the thread through the thread guide ③.

4. Wind the thread around the bobbin ① several times in the direction of the arrow.

5. Press the bobbin hold ④.
   
   Note) If the thread cannot be wound evenly, loosen the screw ⑥ and move the thread guide ⑦ right and left for adjustment.
   
   In order to wind more threads around the bobbin, loosen the thread ⑤ and move the bobbin hold ④.

6. After winding is finished, pull out the bobbin from the bobbin winder shaft and trim the thread using the thread trimmer ⑦.
   
   Note) • If the thread is wound too tight and comes off from the tension disk, loosen the knob ④. If the thread is too loose, tighten the knob ④.
   
   • If the circuit protector ⑤ functions, the bobbin winder motor does not rotate. Leave it for a while for cooling. Then press the circuit protector ⑤. (The thread does not come out when the motor is not cooled enough.)
